## DISCLAIMER

I am not a doctor. I am not offering medical advice to anyone who may read the information contained herein. The historical health information discussed is not meant as a substitute for advice from your physician or other health professional and should not be interpreted as a medically approved treatment regimen used to diagnose, treat or cure any medical condition. Any concerns about physical health should be addressed exclusively by your medical physician or your medical health professional.

Many opinions have been made throughout the book and these should not be interpreted as factual medical knowledge, events or advice. Many observations, comparisons, analysis, assessments, opinions and conclusions are conducted as a result of research into the topic of historical cancer cure claims over the last 100 years, throughout the book.

In no instance shall the information provided or referenced be construed as providing any type of medical examinations, analysis, guidance or treatment regimens of any kind and are not intended to be interpreted as such. The author assumes no responsibility or liability for any actions the reader may take, share with others, misuse or misinterpret and is intended for general information use only. Every effort has been made to ensure that any information presented and discussed is factually accurate, but the author is not liable for any errors in content or meaning that may be interpreted erroneously. The reader is advised to conduct independent research to validate any and all statements and opinions made, which were compiled during the research for this book.

## DEDICATION

**T**his book is dedicated to every person who has suffered directly or indirectly from this terrible disease known as cancer throughout history. The cure to cancer is out there. The information is lurking in a shelved library book, your refrigerator, a grave with a deceased cancer medicine pioneer in it and in many other locations. Like having a pirate treasure map in your hand, it is waiting for you to discover its stored location and knowledge. Once found, understood and its healing principles applied to life, an individual may be able to recover their individual health if that is their conscious desire.

You are more than your body. You are an immortal spirit/soul who transcends the constraints of the physical dimension. The human body is a sacred temple and has never been intended to become sick in and of, itself. What it is fed and exposed to in its environment is what makes the difference in whether it stays healthy or becomes ill with any type of disease in this lifetime.

May you recover your good health if you have lost it along the way while you lived your life day to day. May you maintain your good health if you have it presently. May you always continue to have good health and be the beacon of light that shines for others to follow. For those who are no longer with us, may we honor and remember them in our souls and hearts. May we come together in their memory and also demand our birthright to have and maintain a healthy and functional body be respected always. We reject all things that weaken our immunological defense system and deprive us of access to wholesome and clean foods. Those weaponized foods that do not provide adequate nutritional value and contaminate our bodies with toxins, chemicals and pollutants have no place in our food supply chain.

A new world and way of life await those who dare to challenge existing norms and the status quo of cancer. Fear is a useless emotion and stymies mankind's mind, spirit and body. Do not be afraid of cancer, embrace the message that it is trying to tell your conscious mind that cannot see or hear. Once you see it's secret, it can be defeated.

## INTRODUCTION

**A**s you read the information contained in this book, your conscious mind will expand and comprehend there is a path to better health available to you in this lifetime. Picture yourself in a few short weeks, months or even a year, with complete health and no trace of any diseases in your body. You must tear down any pre-conceived beliefs and indoctrination that have misled you into a false dead end; that conventional cancer treatment is the only option, it is not.

This book is an incomplete historical collection of various different alternative medicine cancer treatment protocols that have been developed and publicly implemented throughout the world over the last 100 years to treat or cure all types of different cancers. It is not intended to be an in depth registry or thesis dissertation on the individual developer's biography, lifestyle, education, political inclinations or other unrelated areas. It is a historical introduction to just a few of the many publicly claimed cancer cures that have existed from over 100 years past to present day. It is an incomplete history for many reasons, but mostly because there are literally several hundred alternative medicine cancer protocols publicly known and disseminated today and cannot be adequately chronicled here. Practically all have been classified as illegal or without merit by the Food and Drug Administration (FDA), the American Medical Association (AMA), the American Cancer Society (ACS) and a variety of other organizations that are directly and indirectly involved in the international cancer business.

The scientific and medical research conducted on the open source information is suggestive that there has been/is a deliberative intent to discredit, malign, suppress, persecute and prosecute any individual who claims to be able to cure cancer over the last 100 years by the

cancer business and government organizations. Whether the individual discovered an effective cure for their own cancer or that of another person seems to be irrelevant. The main theme appears to be discrediting, undermining and the complete dismantling of any anti-cancer protocol that can challenge the conventional cancer treatment regimens that exist today (surgery, radiation and toxic chemotherapy medication) and protect their international cancer businesses economic interests and global monopoly stranglehold on cancer treatments.

Those cancer patients who are still alive today; 1-5-10-20+ years after conducting an alternative medicine cancer treatment protocol would beg to differ in opinion from the FDA and other cancer organizations that their protocols were not effective because they were not based on the scientific method and therefore, could never cure any cancer. Many of these cancer sufferers were deemed terminal and sent home to die when conventional medicine could no longer prescribe any other known conventional treatment protocols to heal their cancers.

Their individual and collective will to live led them to alternative medicine healers who were able to bring back homeostasis to their bodies, resulting in the eradication of their cancers. This book is a testament to the many brave health pioneers who risked it all to help their fellow human beings overcome their dreaded sicknesses. Like most of us, they did not ask for fame or fortune in their searches for cures, nor did they seek it out. Their calling was beyond this material world, paying it forward with service to others (STO) as a gesture of compassion and love.

It is my belief that there is medical technology out in the world that can cure practically any disease manifestation that mankind suffers from in present day form. Unfortunately, these are probably being withheld from the general population for economic and other nefarious population control reasons. How can such a statement be made and justified? If the following anti-cancer protocol examples that you will read about in this book have been previously discovered and publicly disclosed over the last 100 years, then those that are even more effective are likely to be under far stricter control from full public disclosure and dissemination.

Until such time as definitive and effective medical cures are ever permitted to be disclosed by the cancer business to the general population, the gold standard of conventional cancer treatment (e.g.

surgery, radiation, and toxic chemotherapy medications) are the only protocols accepted and approved by the cancer industry to be utilized. Any alternative medicine protocol utilized for cancer treatment/cures are targeted for suppression, persecution and prosecution.

As you already suspect, cancer does not discriminate against ethnicity, age, sex, religion, social, economic or political status. It does however disproportionately favor those individuals who have a poorly functioning gastrointestinal (GI) system, a body waste excretion dysfunction, a weakened organ or immunological defense system and poor dietary habits (lifestyle). This is not a state secret, but rather just not widely disseminated to the general population.

This book could never be able to capture the hundreds and hundreds of other potential cancer remedies, protocols or combinations that have existed and were invented by the great pioneers of their times. Some have existed for thousands of years (like garlic) and others leading up to present day times. It would be an injustice to even imply such a task was achievable. As such, the intent of this book is to provide you a glimpse of some of the remedies that have been presented by brave individuals, who chose the difficult paths and confronted orthodox medicine head on with bold new ideas and methods to remedy cancer over the last 100 years. This book is not intended to be an in depth, peer review dissertation of each person's biography and their individual lives from cradle to grave. It is merely an introduction to their individual existences, when they walked among us with their knowledge, how their remedy is intended to function against cancer and snapshots of their firsthand patient results, etc. for your situational awareness and general knowledge.

As you analyze the many varied cancer protocols referenced in the forthcoming chapters (breast, prostate, lung, pancreas, liver, kidney, colon, stomach, brain, throat, skin, cervical, ovarian, testicular, blood and the endless others) over time, common patterns and themes shall emerge unexpectedly before your eyes, between the different protocols. When these are detected, questions arise to determine if there are other commonalities between the different cancers. If yes, what are they and how are they inter-related? Questions beget more questions until common denominators are identified that result in significant theories and conclusions, based on concrete statistical findings. The referenced reading books in each chapter provide corroborating statistics, facts, research, studies, testimonies and the author's personal insights.

Perhaps, in the intricate jigsaw puzzle that is cancer, one day any of these standalone pieces will be discovered to be the missing piece of a larger and interconnected physiological cancer labyrinth. Perhaps even in combination with other standalone pieces, they can develop into a more effective protocol to completely eradicate cancer in our lifetime (if the cancer business is prevented from undermining, suppressing and persecuting all those involved in its discovery, development, dissemination and implementation). What is the missing link that may possibly hold the answer(s) to your specific questions?

A more pragmatic reality for those who do not have years, months, weeks or even days to wait for this utopian realization is that there are already overwhelming case histories that a remedy has always been within an arms length away. One of the common denominators that has been found in practically all cancer patients by many doctors, oncologists, pathologists, biologists, researchers and laboratory studies is the existence of a relationship between the *Candida Albicans* (CA) fungus and the development of cancer (e.g. compromised immunological defense system). The CA fungus seems to always be present in all types of cancer patients. Conventional and orthodox medicine attributes the CA infection as a secondary effect of cancer development (side effect, not cause of cancer). Others, however, disagree and affirm that CA is a main contributor to the development of cancer in patients from the onset (cause, not effect). That there is definitively a direct link between the two disease processes (CA and cancer) and should not be marginalized.

The perception is that if *Candida* can be eradicated early on, there is less probability of developing cancer in the body. This is a very interesting theory that has substantial supporting evidence, corroborating a direct cause and effect relationship. The next logical question is: how does CA develop and grow in my body? The research indicates excessive use of conventional antibiotics destroys the good intestinal flora in the GI system, thus resulting in an ideal environment for the overgrowth of CA in the body. This is further complemented by consumption of an imbalanced diet (western diet, high in animal proteins, poultry, eggs, fish, carbonated drinks, refined sugars, trans fats, dairy products, junk food, GMO and other foods lacking nutritional value). A hypothetical analogy that parallels the human GI system and the development of degenerative disease formation is the following comparison of a vehicle and your human body:

You receive a completely new automobile (like a new born baby body) and it does not have any accumulated kilometers on the engine (heart), transmission (spinal cord) or chassis (general body). The fuel tank (GI system) is filled with standard gasoline daily (plant derived baby food) that is consumed for day-to-day use. On occasion over the next 40+ years of your life, dirty and contaminated fuel (sodas, candies, animal meats, inorganic vitamins & minerals, dairy products, refined breads, etc.) are processed and converted in the gas tank and causes the fuel filter (liver) to become regularly clogged with floating and settled debris (toxins, parasites and indigestible foods), resulting in the engine knocking and decreased horse power output, etc. As the years progress and more different types of dirty fuels are inserted into the fuel tank (trans fats, raw fish, undercooked meats, more processed and refined foods, sugars, pollutants, contaminants, etc.) these add to the chronic clogging of the filter (bile stones and wastes in the liver) and can cause the system to backflow toxic wastes in the combustion and operating systems (lymphatic and circulatory system).

When your automobile body is now 60+ years old, it lacks horsepower and can barely drive up a sloped driveway. It may have had a paint job on the body over the years, keeping it washed and waxed on the outside, but what of the combustion engine, transmission, electrical and mechanical operating systems on the inside? Is the engine fouled with viscous gunk from the backed up fuel line that overflowed (toxic wastes from the intestines overflowing into the lymphatic and circulatory blood systems) into the combustion chambers? Most likely the gas tank has never been dropped and cleaned out (intestinal cleanse) at the garage of any floating sediment, debris and water on the bottom of the tank or other contaminants that have been in the fuel tank for these many decades. Most likely the fuel filter has never been cleaned (liver cleanse) either. If the engine's fuel system has not been adequately supplied with good, clean fuel, or if preventative maintenance cleanses conducted over the years on a regular basis have not transpired, then no quantity of high octane boosts (antibiotics/supplements) car washes, repainting or other cosmetic effort (liposuction, stents, bypasses) will ever be able to restore the engine's original horsepower to the level it should have been if it was properly maintained.

Only by cleansing the fuel tank, fuel filter, air filter, removing the accumulated wastes from the engine, feeding it good clean fuel and conducting regular preventative maintenance tasks can the automobile

last 100 years or more. Once your body has its waste and excretion filters cleaned and are operating optimally, there is little probability the human vehicle will suffer from any mechanical breakdowns. If the human body is fed clean and wholesome food, cleaned regularly of accumulated and putrefied wastes and maintained with moderate physical exercise, there is less probability of experiencing any type of mechanical breakdowns (degenerative disease formation, like cancer).

The protocols discussed herein have been referenced by their developers as being successful in treating, eradicating or remedying cancer in their many patients. If their protocols were not completely successful in remedying their patient's cancers, they reportedly were able to obtain an improved quality of life and extended their life spans to a larger degree. For your awareness, this book references some of the most publicly known Nobel prize winners, medical doctors, oncologists, naturopaths, health practitioners, scientists, inventors, empirical researchers and individual health gurus who have made it their life's goal to help and heal their fellow man from cancer and many other diseases. They clashed with orthodox medicine for the benefit of us all, around the world.

You will discover for yourself as you read the many chapters and reference reading; that in return for their efforts to help their fellow man, many were ridiculed, de-legitimized, persecuted, prosecuted and medically excommunicated (licenses to practice medicine were revoked or they were imprisoned) from the halls of conventional medical academia and society, branded as heretics, charlatans and other undeserving vile names by the sentinels and cohorts of the cancer business. Their individual stories on how they discovered and implemented unorthodox protocols to help humanity cannot fully be encapsulated in just a few pages of any single chapter. This book barely scratches the surface of the many-many alternative medicine cancer treatment protocols that have been publicly shared in books and articles in the public domain. Again, this book is not intended to be a biography on each individual's personal history, but rather a brief introduction and synopsis of their protocols for your situational awareness. This includes the commonalities that they each experienced in their work, and how they were attacked and slandered during their unwavering quest to heal humanity of cancer. They were able to make a positive difference for so many cancer sufferers that would have otherwise likely been maimed, mutilated or perished if left to conventional cancer medicine treatments, including those that had

already been discharged from the hospitals and sent home to die after suffering through their unsuccessful surgical, radiation and toxic chemotherapy medication protocols.

As you will discover firsthand, conventional cancer treatment protocols have historically never completely cured cancer patients per se, but rather only treated the symptoms and delayed the end result, not cured the root cause of the cancer. The root cause is suspected to be directly related to poor dietary habits (western diet high in animal proteins, processed foods and sugars) and an inadequately functioning Gastro Intestinal (GI) system (slow moving bowels) that results in the buildup of toxins and wastes in the body. These subsequently saturate the body and begin the process of developing degenerative diseases of all types. The reduction of the size of cancer tumor/cysts by conventional radiation is not indicative of successful cancer treatment, but rather that the radiation killed off the white blood cells (WBC) that were encapsulating the cancer cells and keeping them at bay. Now, after being killed off, mostly the cancer cells remain in the smaller sized tumor (that were unaffected with radiation) and are free to further propagate and expand systemically throughout the body, unimpeded.

If you have ever had the misfortune of watching someone being told they have cancer (or have been the recipient yourself), then you have seen/lived the emotion of sheer fear/terror on your face and body. The air in the room becomes thickened with dread and fear that can be palpated and cut with a knife. There are so many different thoughts that race uncontrollably through your mind, and in so many different directions. The realization of finite mortality sets in. This fear should be reigned in and neutralized. This fear is artificially generated to evoke an obedience response. Destroy the fear of the unknown, it does not exist. Only you can control how you feel and manifest your own destiny so choose strength over fear, it is your birthright.

I had the unpleasant misfortune once of being misdiagnosed with pre-skin cancer for 6 months by my dermatologist and it shook my life. I stood up and took notice very quickly to everything that I had been/was being indoctrinated to believe about cancer. I took the medications, creams, lotions and followed instructions diligently. I later discovered they were all wrong and these caused more damage to my skin and body than if I had never taken any type of medication from the onset. The *“first do no harm to the patient”* medical creed appears to be optional in cancer treatment it seems.

Fear is what drives humanity into obedience and compliance. It can probably be traced back to infancy, where fear is taught and reinforced in every aspect of human development and society. This systematic indoctrination program sets the stage for all future responses in adulthood. A dormant hidden sleeper cell emotion, burned into our subconscious response mechanism. Obey or you will be punished. Authority and positions of power are never to be questioned. Complete obedience is the goal desired and expected by the cancer business (as well as other population control groups).

The diagnosis of any type of cancer should not be interpreted as an end all to life, but rather as a pre-emptive warning to awaken your conscious awareness about the sacred temple which is your body. Its presence is indicating that the spiritual occupant of the body has allowed it to develop an imbalance within it and now requires prompt rectification in order to reacquire homeostasis and good health. Good health is achievable, but only if the spiritual occupant (conscious self) does not get in the way of the body healing itself of diseases like cancer.

Your body needs to be provided with healthy, wholesome and nutritious foods and completely clean drinking water. Your body was never designed to consume and digest processed and refined poisons that have little or no nutritional value or that cause acidity within it. Your body was never intended to absorb/ingest pollutants into it as well. Those basic concepts can put the healing process in motion as a starting point, despite any individuals best conscious effort to undermine the process as a result of assimilating any misleading indoctrination beliefs into how to heal their own bodies, according to conventional cancer medicine protocols (erroneous disinformation).

The research and investigation conducted to date is convincing that cancer appears to be a systemic disease of the body and has several catalysts that allow the disease to promulgate quickly. It is not an isolated event in any individual location of the body. Cancer cells are always present in the body and are attacked by the body's naturally strong immunological defense system on a daily basis, very effectively. When there is an immunological imbalance/deficiency or there exists a physical injury anywhere, these cancer cells can congregate, grow, and propagate in any weakened or injured part of the body that suits their continued reproduction requirements. These subsequently manifest themselves physically (tumor/cyst/growth) when there is sufficient accumulation of its cells and an anaerobic food supply is available.

Whether it is the result of a poor diet, physical injury, chemical contaminant exposure, parasite infestation or other cause, the immunological defense system is too weak to defend itself and thus the manifestation and detection of cancer in the body. Mankind was born with a strong immune system designed to prevent cancer and other degenerative diseases, but changes to mankind's dietary habits (western diet) have tipped the balance in favor of cancer development where it once hardly even existed (pre-industrial age) to today's astronomical levels.

As you have probably noted in TV and medical reporting, the common response of conventional (oncological) medicine has been to excise the cancer (surgically cut it out – breast, prostate, colon, testicular, etc.), radiate the area to death, consume toxic chemotherapy medications to kill off the remaining cancer cells (and the healthy cells around it also without discrimination) and declare the patient cured for up to five years. It (cancer) has not been eradicated in the patient with this medieval and barbaric mutilation protocol. Only the physical butchery, excavation, removal and disposal of the accumulated cancer (small quantity of cancer cells and healthy white blood cells comprise tumor material) and mostly flesh from the patient's body, has taken place.

Subsequently, cancer cells (that may have been previously quarantined inside a tumor/cyst) are released from the surgical site and escape into the bloodstream/lymphatic system. These quickly spread throughout the body, unabated. These new cancer sites (tumors) can manifest themselves anywhere in or on the body as a result of being set loose to ravage the body at will. This can be at a single independent site, or at multiple locations at any given time. The surgical procedure has released the previously isolated cancer cells to further propagate in the cancer patient's body. A person can have a cancerous growth removed from any part of the body (symptom), but the root cause will simply manifest itself again and again if changes are not made to eradicate the original source of the cancer, from the onset.

After researching thousands of pages on cancer protocols and observing common themes emerge from them, an analogy comes forth to mind. How many kinds of coffee drinks are there available in the world? The answer can quite literally be dozens, if not hundreds or more. Just go to a local coffee shop and inquire how many varieties of coffee beans they carry from around the world and how many different coffee brews they have for each type of roasted coffee bean.

In this sense, cancer parallels the observation about coffee. There are various types of cancer that are categorized by its clinical manifestation in various different locations within the human body and the various stages (I-IV) of development. Likewise, there are countless treatments available for each of them (if alternative medicine protocols are included). If only conventional cancer protocols (surgical excision, radiation and toxic chemical medication therapy) are taken into consideration, there would only be a few coffee options available for the consumer and I believe they would be extremely bitter to the taste, scolding hot to drink and cost way too much for your budget to consider as viable selections.

Hypothetically, if there is only one (1) coffee shop franchise in the country, they can dictate what coffee beans are publicly available. They can also set unilateral prices on each cup of coffee to drink. If you happen to be an investor/owner in this ideal business environment set up, then you have a lucrative business by having captured both the producers of coffee beans and consumer end user base. An ideal business (monopoly) arrangement provided no one figures it out and files an anti-trust lawsuit against the coffee shop franchise.

If there ever were such a hypothetical coffee shop franchise business arrangement, why would they ever allow any new coffee shops (competitors) to open in the same community, city, state or even country? They probably wouldn't if they were there to make money and wanted to have a strangle hold on the coffee business. They probably would ensure to make strong ties with the local chamber of commerce, local legislators, state legislators, federal legislators and law enforcement agencies (code compliance) to help maintain their status quo and legislate out (pass laws in their favor) any potential competition from even trying to establish a foothold in their coffee business empire. They probably would advocate for extreme laws to be enacted by their lobbied representatives (whom may have received donated monies for their re-election campaigns and continue to have strong ties with at every level of government), protecting their coffee empire business from any potential competition or alternatives.

If you, the coffee client/consumer, became restless on occasion or demanded better quality service or variety to the menu, the franchise owners might add an extra cube of sugar or two to cosmetically placate you and then might raise the price 50% so that you never interrupt their steady business revenues with silly consumer demands ever again.

Drink what they produce exclusively or see your way out the door, since they are the only coffee business in town. By the way, the local ordinance that was enacted by the city council (required by law) mandates that all city coffee pots must use only the franchise's coffee grounds in the making of their city provided coffee drinks throughout the day. If you are a government employee found to be changing or replacing the city provided coffee grounds with any "alternative/unauthorized" coffee grounds, you are subject to disciplinary action, dismissal, fines and imprisonment. Is this just?

You have to ask yourself, is there really much difference between this hypothetical coffee franchise scenario and conventional cancer treatments performed by the international cancer business of present day? Anyone who has tried to elect out of radiation and chemotherapy for their child (because they wanted to use a safer alternative medicine protocol) has probably experienced firsthand how quickly some doctors and hospitals request judicial intervention, child protective services and law enforcement (supposedly in defense of the helpless child to their side from their irresponsible and misguided parents) to intervene. Claiming endangerment of the child's health, the court mandates radiation and chemotherapy treatment to further ensure the child's prompt demise, all the while ordering the use of toxic chemotherapy medications and in some instances, experimental drugs to ascertain if there are any side effects (illegal and involuntary human experimentation against their will) on the helpless and unknowing child.

If you were the parent, what alternatives would there be except to fight in court (mostly a losing battle as the judicial system is, at best, asleep on the job), physically resist surgery/radiation/chemotherapy (get prosecuted for defiantly asserting parental rights to protect your child), flee to another state/country (get issued a warrant for arrest for fleeing lethal radiation dose treatments on your child) or what other alternatives are there for you as the grieving parent as your child is illegally subjected to radiological torture, poisoning with toxic chemicals and barbaric butchery as has never been witnessed before by mankind (excluding the concentration camps of WWII)?

What of those forgotten children who are wards of the state and have no family members to speak on their behalf or defend them against these types of experimentation atrocities? These nameless infants are completely at the mercy of illegal experimentation and don't know what

is occurring, other than they are sick, full of fear and alone. They can be victimized by these types of bureaucratic organizations and do not have any champion to defend them from the cancer business.

Society laughs today at the “doctors” of centuries past who used leeches to suck out the blood and treat their sick patients that suffered from diseases. When an infection could not be controlled, amputation of the limb or part was the “best” solution after leeches. The latter option seems so humane in comparison to today’s conventional cancer medicine protocol of radiating to death the body part and poisoning the remaining ones to death, all in the name of curing the patient of their cancer. This is not practicing medicine, but rather modern day witch burning, to drive out the demon cancer from the human body until the evil is removed or the person succumbs and dies. Then it can be claimed by conventional medicine to having expelled the evil cancer that had possessed the individual and if they could not heal them, then they are sent home to die and written off as if the demons sorcery was too powerful to overcome. Modern day savagery is alive and well in the international cancer business, protected by its sentinels and allies.

As you continue to read more thoroughly into this book, you may discover that conventional medicine (surgery, radiation and toxic chemotherapy medicine) is for conventionally minded people who have been indoctrinated in the scientific method of analysis and treatment. These people have been deceived and tricked into surrendering their independent thought process of rational analysis. They cannot be blamed for thinking this way and it is not their fault. It has been built into each person since childhood. When they tried to break free of the façade, they were likely scolded, ridiculed and mocked publicly to further intimidate any other cancer patient who may have wished to deviate from the conventional cancer business protocols, for multiple generations now. It is not their fault, nor those of the fully committed doctors whose only purpose in life is to help others become well and heal.

Doctors, unbeknown to the general public, suffer one of the highest suicide rates for all professions. Day in and day out, trying to save the lives of every patient who enter the emergency rooms around the world. The infant who could not be saved from a defective heart, the child who slipped away because a minute detail was not detected in time in the blood test, the unknown allergy that put a teenager into shock and perished, the mother who could not stop bleeding during

birth and now leaves her child an orphan or the grandparent who had a hidden ailment that masked as a more benign type.

Consider the brave and selfless doctors who should be revered and appreciated more often than they are presently. The 1,000 lives saved by a doctor suddenly mean nothing when a child could not be saved and the doctor is vilified. The stress and remorse may be too much to handle for any single person. The grieving family does not know or care that the doctor has saved thousands of lives, the only life that matters is the one just lost to them. Doctor suicide does not discriminate and in my honest opinion, the vast majority of them are service to others (STO) oriented. Only a very small few doctors have likely abdicated their responsibilities and those are the doctors that can tarnish the image of the many other selfless doctors around the world.

You may have experienced daily indoctrination in your life via television, radio, internet, society, schools, family and friends as all have played their individual roles in shaping your individual and collective human thought process, ensuring passive and overt compliance. Few people want to be different from the others. Everyone (generally) wants to be part of the tribe and be part of the community.

If an individual sees a doctor (an actor) with a lab coat, stethoscope draped around his neck and nametag on a TV commercial, then what he is espousing publicly must be the natural order and way of the world and he should follow blindly along to whatever the actor has to pontificate to the masses. That is exactly the kind of response that the cancer business, pharmaceutical companies, governments, religion and other organizations strive to attain, complete fear and obedience (compliance) of the mass population, not independent thought.

By institutional design, only black and white options exist in the cancer business. It is no different than a socialist/communist government in politics. It does not want another political party option to compete against its' one party system. There is no room for alternative medicine protocols or spiritual beliefs. These have been hunted down and persecuted to practically extinction at every opportunity by fearful cancer business sentinels, money driven executives and stockholders, equipment manufactures, health insurance companies, big government (who want bigger bureaucratic organizations without accountability) and other zealots of the cancer business in every corner of the world. Anonymity is their shield to hide from accountability.

Humanity has been purposely left in the dark about alternative medicine treatments that pre-dated the existence of the fabricated scientific method and ineffective pharmaceutical antibiotics. The population has been institutionally re-educated and indoctrinated to believe and obey the word of the self-declared medical gods (small “g”) of the cancer business. Again, in their defense, the vast majority of medical doctors should not and cannot be blamed for this situation. Their selfless service deserves only grateful recognition. Unfortunately, the constraints and limitations that have been unduly placed on them by their administrative hierarchy (AMA, FDA, etc.) put them on the front line and become the scapegoats for those faceless individuals in the background. There are countless committed and selfless doctors who have studied arduously for years in academia and only want to heal their patients (not the money and greed driven doctors that may exist). How can you decipher and filter out the good ones from the bad? Intuition and gut (subconscious/higher self) reaction will normally provide the answer to oneself, if asked.

There is an appearance that some medical training academia have steered medicine down a certain path of no return, ignoring effective alternative medicine treatments/cures in favor of ineffective conventional medicine protocols. Any administrators of academia who have abdicated their moral responsibility to disallow any type of effective treatments of sick patients with herbal plants that cannot be patented, have compromised the medical Hippocratic oath and morality of their students and doctors to the pharmaceutical and chemical companies product lines (surgery, MRI and X-ray equipment, toxic chemotherapy medicines, antibiotics and radiation) of misery and suffering.

In conducting research about the many different alternative medicine cancer protocols over the last 100 years, a few common themes consistently rise to the surface between the many selfless alternative medicine healers around the world and their patients:

- (1) The inner desire to help cure and relieve the physical suffering (cancer and diseases) of mankind by the inventor/promoter.
- (2) No real interest in personally profiting monetarily or attempting to create an economic monopoly for the healing product.
- (3) Rejecting lucrative business proposals when the anti-cancer protocol is not given to humanity at low cost (or free).
- (4) Suffering retribution at the hands of Medical licensing boards,

pharmaceutical and governmental interventions to shutdown, suppress, arrest and persecute individuals who treated or cured cancer patients with alternative medicine at all costs, regardless of any demonstrated medical efficacy or benefit to their cancer stricken and subsequently healed patients.

- (5) Many of the cancer patients expended all possible options with conventional medicine and turned to alternative medicine in a desperate attempt to save their lives. Many patients were referenced as late stage IV, terminal cancer patients that had been given up by their doctors/hospitals and basically sent home to die (no additional treatments were deemed effective in the hospitals). Only then do the patients realize they had been misinformed/misled about the less than 3-5% (on average) efficacy of their conventional cancer treatments.
- (6) Medical practitioners (doctors, nurses, radiologists, aides, others) who are involved in cancer treatments with patients witnessed daily the cause and effect of radiation and chemotherapy have indicated privately that they would never elect conventional cancer treatments for themselves. They prefer to die at home, at peace than to become mutilated, disfigured and physically destroyed as a human being utilizing conventional cancer protocols and still not be healed in the end.

All is not lost though, there is hope for a different probable future for anyone afflicted with cancer (and those not afflicted as well, preventively). It is called conscious awareness. Once information is compiled, analyzed, assimilated and comprehended, that is the first step to making informed decisions about individual health. Once the root causes of cancer are consciously understood, the mystique and fear associated with it no longer have power over anyone. Just imagine in your mind an image of the grim reaper posing with his sickle and skull facing you in sheer horror, only to watch as his robe falls off accidentally and exposes the childish superhero underwear set over his skeletal frame, causing him slight embarrassment of his childlike taste in undergarments. The fear, mystery and awe are no longer there. What was previously a moment of unexplained and horrific fear has turned into an awakening that you can only give as much importance to fear (cancer) than you wish to give it.

Conscious awareness and knowledge are allies to you and anyone who has ever been diagnosed with cancer. They are potentially the real cure to self-healing, without mutilation and pain, achieved in a short period

of time (provided the person wants to be healed and will not consciously/unconsciously undermine the self-healing process by interfering with the body's efforts to heal itself naturally).

This book provides a different perspective on the history of cancer over the last 100 years and what is perceived as a mega and international cancer business. The present yearly costs in cancer treatments and medication exceed over \$100 billion dollars. It is projected to exceed \$200 billion dollars by the year 2020. We are all just potential cancer business clients who are being fed junk and improper foods to fatten us up with more cancer cells, and then groomed (indoctrinated) to voluntarily walk into the cancer treatment slaughterhouses (surgery, radiation and toxic chemotherapy medicines) of our own accord.

Imagine what would happen if bulls and cows were spontaneously given the gift of consciousness and situational awareness of what they were being groomed and herded into. Do you think they would voluntarily walk into the cattle slaughterhouses? Would they stampede like hell on fire over their sentinels/keepers (like the running of the bulls in Spain) to get out of there at all costs to live another day? Can you say "Moo..." like a cow or can you see all that is occurring around you? TV, fast foods, contaminants, pollutants, carbonated drinks, sugars, refined and processed foods, candies, dairy products, trans fats, animal proteins, antibiotics, medications, vaccinations, contaminated water, electromagnetic saturation with Wi-Fi, cellular phones and towers, smart houses and the endless list of potential cancer and sickness inducing variables surround mankind continuously, everyday. It can be overwhelming if not put into proper perspective.

What makes any of us (mankind) any different from cattle if we believe the fabricated limitations placed on our own future by the international cancer business? Everyone seems to have been deceived and misled with disinformation and unknowingly subjugated to ineffective cancer treatment protocols that do not/have not ever worked against cancer.

Awakening of individual consciousness and realization of spiritual immortality can empower anyone. The physical body will last only as long as it is cared for and if it wants to continue living in this lifetime. Manifest the destiny that is desired for self, not the artificial one dictated by the sentinels of the cancer business who may see patients as the next quarterly earnings statement, dividend and yearly bonus \$\$\$\$. If in doubt, ask cancer doctors if they receive commissions (cash

money, paid conferences, stock options, paid vacations, gifts, paid travel, etc.) each month/year from the pharmaceutical companies for prescribing any of their patented medications. They will probably be stunned that you have knowledge of this practice and deflect the question to try to avoid giving a response. Few cancer doctors have the financial strength or intestinal fortitude to stand up against the mega-pharmaceutical companies. Those doctors who have the moral courage to reject the conflict of interest buyouts are worthy healers, great humans and likely ostracized by those who have succumbed to material rewards.

In the conclusion chapter of this book, the culmination of research literature is shared for your situational awareness and provides publicly available information that may be beneficial to anyone wishing to assess their individual situation. The information describes and shares the probable root causes of cancer and how others have proceeded with their medical doctors (whether it was conventional medicine or alternative medicine) of confidence. Additionally, self-investigation techniques that can be applied to assist in assessing and evaluating any poor dietary and food consumption habits that have been previously found to cause body ailments and degenerative diseases in the global population. Generally, each of the protocols to be discussed in the following chapters are claimed to be effective on all the different and varied types of cancers. Some have more success in certain organs/locations than others and unless specified otherwise, should be considered universal cancer protocols by their inventors.

It is hoped that you can reap benefit from the information researched and compiled from the various cancer pioneers and inventors of their times. They, like many others in this life, chose to meet their challenges head on. If you did not have this mindset, you would not be reading this information right now.

Welcome to the introduction of your new conscious awakening on cancer and the new life that potentially awaits you. Only a person who wants to see what is before them will be able to manifest and achieve conscious awareness. Those who do not wish to know, or are not yet ready to receive the knowledge that is before them are unable to manifest their own destinies. May you find happiness and good health in all that you do in this life cycle.

## **History (AMA-FDA-ACS-Others)**

**D**o you remember any recent or ongoing story put out by the cancer business that a potential cure for cancer is currently being studied in research laboratories around the world and a promising breakthrough is right around the corner? The ever effective - *just a little bit farther down the road* story to further manipulate the cancer population into donating more money, more resources and selling more ineffective and potentially toxic cancer medication and equipment. This statement may appear to be insensitive, but quite the contrary. It helps to expose over 100 years of cancer research undermining efforts and the present day culmination of non-effective breakthroughs or tangible results.

What has changed for the better in the last 100 years for the average cancer patient today? Yes, there are more x-rays, MRI's, surgeries, chemotherapies, costly and ineffective medications and the cancer patient on average has less than a 5-year expected life span (terminal patients). How do the likely hundreds of billions of dollars in research and study justify the little gains over this same 100-year period of time? Are the research scientists and doctors less educated and trained today then they were 100 years ago? Not likely, so what is the impediment to advancing a cancer cure in this modern age?

The medical community openly admits they do not even know what causes cancer publicly still to this day. So then, how can the cancer business claim they have the situation under control and that they have made great gains against cancer? By statistically maiming more people or charging higher costs to validate that the patient has cancer? By giving the patient extra radiation to further destroy their bodies? By

what gauge is progress or success monitored, evaluated and validated? Is it the useless and irrelevant scientific method or the direct human feedback? What is the cancer business standard that defines success?

The cancer businesses research efforts appear to focus on any type of previously unheard of germ, bacteria, chromosome, chemical agent, DNA manipulation, etc. as a potential catalyst to cure cancer. Their myopic view in researching the unrelated and obscure (bright-shiny things) seems so far removed from the cancer reality that these perpetual studies (always a new study being showcased in the news, year after year) for new discoveries appear to offer only psychological hope to cancer sufferers, but nothing tangible or realistic without sacrificing a body part or limb as a testament to its lack of efficacy.

Cancer sufferers should not, however, lose faith in finding a cure to their ailment and should consider self-researching cancer information. Perhaps starting at the grassroots level might be warranted as a starting point? Existing public research has already validated that the consumption of wholesome and nutritional foods, cleansing of the GI system and organs, rebuilding the immunological defense system, developing conscious awareness of the body and vigilance of the contaminated environment have all contributed to additional public awareness around the world.

The cancer business continues to appear to be attempting to project or demonstrate some type of scientific advancement in their publicly funded/donated research (non-profit) to continue to further justify receiving limitless charitable donations while maintaining their tax exempt status. All the while, never really advancing any anti-cancer agenda breakthroughs and completely disregarding the many other alternative medicine cancer protocols that have demonstrated an anti-cancer efficacy over the decades. These protocols have collectively saved tens of thousands, if not potentially hundreds of thousands of cancer patients over the last 100 years (before being shut down by the FDA, AMA and other organizations). Meanwhile, alternative medicine practitioners continue to fear persecution and prosecution from the AMA and FDA if they attempt to heal any cancer patient with unorthodox or unpatented cancer medications. Since a garden weed is not patentable and can't therefore be monopolized (\$\$\$), it likely is not of interest to the pharmaceutical companies. It is then declared dangerous by the FDA (as a medication) and cannot be used in the treatment of any physical ailment.

Can you imagine if something as simple as a teaspoon of baking soda mixed with organic molasses and taken several times a day (which has been claimed to eradicate cancer) is effective, the surplus of needless equipment might saturate the market? Again in their defense, the majority of doctors are not the culprits, but rather those medical-educational institutions and for profit hospitals that continue to promote surgery, radiation and chemotherapy over any passive, non-invasive, painless and non-patented alternative medicine protocol that have demonstrated anti-cancer efficacy with testimonies.

The public perception continues to perpetuate itself that the cancer business is a legalized form of racketeering. It snares in the fearful cancer patient, intimidates and convinces them that surgery, radiation, and chemotherapy are their only option and must be implemented immediately or the patient will not survive for long (statistical studies appear to contradict those assertions and have demonstrated the contrary, most live four times longer if no cancer treatment was ever initiated vice having cancer therapy). Once the patient is scared out of their wits, the economic and psychological pressure mounts to use up their life savings, take out a loan, mortgage or sell the home to pay for the excessive costs of the cancer treatments, etc. Then the psychological component of knowing the loved one has a low probability of surviving the disease (and chemotherapy as well). In the end, the expectation is that the family will be bankrupt, indebted for hundreds of thousands of dollars, be psychologically devastated and the loved one will no longer be there with them in the end. A trail of broken tears, homes and bank accounts follow in tow.

A quick review of the incomplete history of cancer cures demonstrates that there have been multiple cancer cures claimed over the last 100 years. These publicly available documents (open source) have been shared with the medical community, cancer community and cancer patients. Where some embraced the concepts and protocols, others scorned and arrogantly denied their existence. Some even to the point of demonizing and persecuting the proponent of the protocol until they completely succumbed and abdicated before the cancer business. These brave medical pioneers must have experienced the irony and disbelief that mankind would turn a blind eye and even deny their existence. These are probably still considered today to be medical heretics that should be burned at the stake for sorcery, or crucified at the cross because they dared challenge and contradicted the conventional cancer business protocols that are the foundation for long term business

(patient) development. How ironic that so many healers who wanted only to do good for mankind, were singled out only to be branded as quacks or snake oils salesmen by the sentinels of the cancer business, their lobbyists, paid spokespersons, medical peers and their cohorts.

**American Medical Association (AMA):** The AMA, without getting into a too detailed history, is reported to have been founded in 1847 by a few individuals as a social organization. It did not prosper from a localized organization into anything significant until its shares were procured by an investor who wanted to convert the association into a much larger and national organization. It then embarked on what appears as a unilaterally spearheaded inquisition style crusade to discredit, oppress, expel and close those medical institutions that did not suit its national objectives or vision for the future to generate advertising revenue through its newsletter magazine (Journal of American Medical Association – JAMA) run by Morris Fishbein.

Depending on the historical research literature material reviewed, there are varied points of view as to what transpired when it fell under the new management leadership during that time. Documented reports and some historians decry it was nothing less than a culling of medical schools (50% closure) during the AMA period of consolidation and hierarchy formation. Practically all the alternative medicine schools were shut down across the USA during this purging period. If not for a few brave Chiropractic Doctors who dared to take on the AMA in court, this alternative medicine (Chiropractic) would have also been stricken from the annals of American medical history. The courts ruled in favor of the Chiropractic profession and it still continues today, despite the AMA's best efforts to eradicate it, as it successfully did with the naturopaths, homeopathy and other alternative medicines of the day. These outlawed alternative medicines of that period have once again been embraced over the last few decades into the mainstream population (Acupuncture, Reflexology, Iridology, Naturopathic, etc.), largely in part because of the resurgence of interest of Eastern medicine, culture and practices that have demonstrated efficacy in treating patient ailments of all kinds. The AMA likely continues to lobby state and federal legislators to further consolidate its strangle hold over the medical professions at all cost, still ever so patient and biding its time for the opportunity to put an end to all alternative medicines (including Chiropractic medicine). In today's terminology, it would be equivalent to lobbying for its self-interests and not necessarily those of the public. How can this be deemed acceptable?

Notwithstanding this defeat (unable to legally prohibit public access to Chiropractic medicine), the AMA continued to crush the individual freedoms of alternative medicine practitioners in every state by methodically introducing, lobbying and helping to implement legislative changes in state medical board laws. They were able to mandate all medical practitioners (doctors) fall under a uniform medical licensing board, to issue and control state licenses to practice medicine legally with the complicit assistance of legislators who enacted the state licensing laws. If unbiased, it serves a purpose. If used for other purposes such as retaliation or censure, there is no worth.

It appears that practically all (there may be a present day exception somewhere) succumbed to the AMA's lobbying and political influence over the years to create these state medical convening boards, of which the national headquarters (AMA) would be the overall governing body that blessed or condemned an individual medical practitioner in any individual state. Unfortunately, for the many doctors and patients around the USA, the totalitarian and archaic laws of control still exist and have a draconian level of enforcement. These have the potential for being influenced by outside groups that control chemical industries (components of medicine), pharmaceutical (manufacturers of all types of medicine), medical equipment (x-ray, Magnetic Resonance Image – MRI and the full spectrum of cancer related equipment) and all other cancer business related fields, to the long-term peril of the doctors and detriment to the patients themselves.

Without going into too much detail here, you will discover there once was an individual by the name of Morris Fishbein who was in charge of the AMA at the time. There is considerable amount of information publicly available to research his history, including Morris Beale's book, ***“Medical Mussolini”***. During his dictatorial reign, he was instrumental in destroying the reputation and businesses of many publicly known and unknown health professionals and businessmen. Two of the most well known were Royal Rife (Chapter 5) and Harry Hoxsey (Chapter 7), to name but a few. Fishbein has been portrayed as a hero inside the AMA (for generating advertising revenue from pharmaceutical companies in the AMA's medical journal) and a villain outside of the AMA (for singlehandedly preventing the use of innovative medical inventions that could probably have cured all of mankind's diseases, including cancer forever, in his pursuit of monetary greed and Napoleonic power). It appears the reputation may be justified by all public accounts, including the courts records themselves.

Today, the AMA is highly regarded and deemed as one of the largest lobbying groups in the USA that controls practically all medical physician's professional conduct. If any doctor strays off any of the sanctioned conventional medical protocols, or is reported to the AMA for any reason, they could potentially be summoned to appear before a state medical review board and have their license revoked. It depends on the severity of the "medical crime" (like practicing alternative medicine instead of conventional, for example).

Did you know that any medical doctor who hypothetically recommends or counsels their patients to clean out their gastrointestinal system, eat whole foods and avoid antibiotics can theoretically be called in for a board review hearing (in so many words)? The medical practitioner has strayed from the AMA party line (advertising revenue) of prescribing mostly ineffective and costly antibiotics by using "alternative medicine" (e.g. natural foods) to cure a disease (not good for their business). Similar to putting any type of other coffee grinds into the coffee maker, instead of utilizing the only "authorized" coffee (by law decreed from the lobbied legislators).

Whenever the present day medical community finally reaches the limits of tolerance with the totalitarian, authoritarian and draconian system of medical oversight and oppression around the world, perhaps humanity can have a real chance at being healed of its many ailments. Until such time that doctors and healers collectively find their inner courage to speak out, come together as a group and demand legislative and governing changes to their cabalistic oversight by the AMA, they shall always live in fear and in the shadows of doing what is economically required of them, not what is necessarily or medically correct for their patients. Time will tell if they find their inner strength to come out from the shadows and retake their God given birthright to heal others, without prejudice or restriction by a business and advertising organization. Otherwise, they will continue to be seen as complicit pawns of the AMA and the pharmaceutical companies that control their every daily actions and agendas.

If in doubt about this perception, ask any medical doctor or oncologist to physically prescribe on paper apricot seeds, baking soda or any other alternative medicine component to help cure cancer and observe as their face turns pale white with fear. They know they would be persecuted by the AMA and prosecuted by the FDA, courtesy of the cancer business that has imposed these medical restrictions against

patients receiving any type of alternative medicine protocols (natural and economic) that would compete against their synthetic and very expensive (patented) treatment protocols.

**Food & Drug Administration (FDA):** The FDA is the US government's designated watchdog and enforcer tasked with securing the "safety" of its population from snake oil salesmen and charlatans who peddle elixirs and medical/health/food products of all types. Their function is to ensure the food that is used for consumption, and the medical products used by humans, are safe for the consumers. Despite this general type of mission statement, the facts would indicate otherwise. Time and again over the last 100 years, there are case studies that would contradict this position. There are many individuals and healers who have been oppressed, persecuted and prosecuted, both directly and indirectly, over this period by this organization without any just cause. It is an unaccountable behemoth of a bureaucracy.

Given their dismal past performance, the FDA is deserving of receiving the grade of a horrific "F", as in Failure, for their inability and unwillingness to go after big pharmaceutical corporations that dump toxic medications (with many secondary side effects that are harmful to humans) into the medical supply chain. One merely has to think of the hundreds of thousands of individuals who die yearly in hospitals as they have secondary reactions to their medications and pass away. This is legalized genocide and the drug manufacturers are not liable for their deaths, courtesy of legislation passed by the elected representatives of government (campaign contribution recipients). The vaccination tsunami of present day and the dramatic increase in autism that has been directly attributed to this unnecessary campaign of vaccination is yet another of many examples of failing the population for the benefit of big pharmaceutical industry and their stock holders. The FDA is deserving of a grade of "F", since their inception.

The irony of the situation is not lost when the FDA shuts down the selling of natural foods businesses (e.g. apricot seeds to be used as an alternative treatment for cancer), confiscates the foods and arrests those involved in selling/distributing them to the public if used to remedy any ailments and diseases. However, it is perfectly ok to have over 200,000 patients die every year under a doctor's care, as a result of taking prescription medication that causes their death, due to secondary effects of the drugs they were taking (FDA acceptable murder by pharmacology) to cure them of their diseases.

Were you aware that these statistics do not normally appear as deaths caused by secondary effects of toxic medications taken by the patients, but rather are normally categorized as patients dying from their original ailment? Semantics and skewing of statistical outcomes are instrumental in convincing any group (whether positive or negatively oriented) to ultimately depict any desired effect at the target audience. Dr. Carolyn Dean's book ***“Death by Modern Medicine”*** sheds a different light on this subject than is publicly projected.

There is clearly something inherently wrong with this practice. Legalized death by medicine goes against the Hippocratic oath “do no harm”. What distinguishes the seller of natural foods (say the individual who sells apricot seeds that contain vitamin B17/Amygdalin and has been shown to be effective to remedy cancer) and someone who sells a strong antibiotic with potentially fatal secondary effects in patients? Who is the more dangerous peddler and merchant of death to the public? The one with more than 200,000 confirmed kills every year and not a single day in prison for the perpetrators of death by legalized medicine or the one who sells seeds and the cancer patients heal?

These publicly available statistics speak volumes of the FDA, and the appearance of an incestuous and unaccountable environment that has festered for many decades with the pharmaceutical, chemical and food industries since its inception. There does not appear to be any hope for public transparency, justice or common sense in sight for an organization that has lost its moral compass and accountability, nor was there ever intended to be any of real significance. It masquerades as a façade, designed to placate the masses into believing their concerns are being addressed by the ever so concerned government agents and bureaucrats (many who seem to end up on the payrolls of the same industries they had oversight of when they retire or leave for more lucrative positions in their previous oversight areas).

The literature researched to date describes a government organization that has the best interest of the pharmaceutical, chemical and food industries, not the consumer or patients. Any person who wishes to sell apricot seeds to remedy cancer can be arrested (and have been) and locked away for years in prison. Where in the US Constitution is a bureaucratic agency (FDA) authorized to arrest and preside over in court proceedings (as Judge, Prosecutor and Jury), to issue sentencing on a citizen of the USA for selling apricot seeds? This is a prime example of government overreach and unconstitutionality by a

governmental agency that seems by all accounts, to have run amuck, and appears beholden to the pharmaceutical and food industries.

Is this not the exclusive charter and function of the judicial branch of government and not the FDA? The judicial power decreed to the FDA is wrought with abuse and should be rescinded post haste. Until this organization is overhauled and the governing rules (perceived conflict of interest and cronyism) have adequate safeguards to prevent continued abuse of power, they should be stripped of their oversight authority and permanently removed of any judicial powers. If the FDA finds any criminal improprieties, those should be forwarded to the Department of Justice to review in order to determine if any improprieties have taken place and if legal action or fines are required. Not even the US Congress or Senate has authority to arrest or file criminal charges, only to refer to the Department of Justice (DOJ) for criminal investigation.

Why is it the Federal Bureau of Investigation (FBI) does not have these same judicial powers as the FDA to arrest, imprison and fine individuals? Is the FDA on the front line of terrorism, arresting and imprisoning international terrorists, bank robbers and other hardened criminals like apricot seed vendors? Is the FDA prosecuting and sentencing terrorists to prison, in a parallel court of the US Department of Justice (DOJ)? The FDA should be restructured or terminated as an agency immediately as it continues to abuse the confidence it was bestowed by the legislative branch of government. Can it be perhaps because the legislators are beholden to the industry after they received their campaign contributions by the pharmaceutical companies and their medical associates that this has not transpired over the decades?

**American Cancer Society (ACS):** The ACS is a very large organization. It has been functioning since at least 1913 in the USA and has been a longstanding icon in the “fight” against cancer in America. For more than 100 years, researching cancer cures to alleviate the pain and suffering of the population. How many hundreds of millions or billions of dollars has the ACS received over the course of its existence? What percentage of these charitable donations can be directly associated with overhead and salary costs, 10-30-50-80%? What is an acceptable percentage level for charitable monies designated exclusively for research vice high paying salaries, expensive vehicles, travel conferences and offices, etc. for its many employees?

The ACS is designated as a charity organization that has a mission statement along the line of freeing the world from cancer and conducting research so you can live longer. It is difficult to comprehend why, after many different cancer remedies have surfaced into the public light over the last 100 years, that the ACS has not been vehemently pursuing these alternative medicine treatments to validate efficacy against the various types of cancers. Instead of independently pursuing cures for cancer, the ACS gives the appearance of being completely in step with the AMA and FDA agendas, to only promote and recognize conventional cancer protocols (surgery, radiation and toxic chemotherapy medications) as the only choice for cancer treatment to the general public.

If the ACS was indeed interested in actually researching effective cancer remedies, they would have gone against the grain and fully pursued the facts, and wherever they would ultimately lead to. There is no real evidence that supports this has taken place, but rather the AMA has abdicated any research efforts to what the others (AMA, FDA and the cancer business) deem as acceptable cancer research activity (research dead ends). The ACS gives the appearance that it is merely a fundraising organization that fully supports the cancer business, seeking to generate charitable donations from well intended, but uninformed citizens. Their status as a non-profit perpetuates the need to never find a cure, otherwise their existence would no longer be required (an end to cancer) and the career executives and organization would be obligated to find other employment opportunities.

Have you ever heard of three card Monte or the shell game where the pebble is hidden under one of three shells, shuffled about and you have to find it? You never seem to find the correct card or shell because (a) you're too slow to catch on to what is happening as they shuffle the three shells, (b) you are purposely distracted by other co-conspirators of the game so that you don't realize you're being duped or (c) the police are supposedly coming and everyone runs to avoid capture, leaving you behind without your hard earned money. I find the analogy of three card monte and the ACS to be similar in many ways after researching the varied cancer literature publicly available.

I believe the ACS has probably done good things for some individuals in their last days, sending them on a day trip to the beach or amusement park. Perhaps even saving a few of the lesser severe cancer patients that only had mild (easily reversible) cancer growths. How

many of them are still alive today? No real (credible) statistics are probably available to the general public for review, only skewed reports in favor of the cancer business I would presume.

The idea of promoting pink, blue and yellow ribbons around trees, shirts and bracelets for cancer awareness is a noble thought indeed. It should not, however, be confused or misinterpreted as direct action by the ACS to combat cancer or even find a cure. It is merely a fundraiser and donation campaign strategy to solicit and generate funding (and sympathy) to perpetuate their infinite research to find a cancer cure, thereby ensuring tenure, pensions and operating funds for the duration of an adult career. All the while, the cancer patients themselves are spearheading the effort, fully committed to end this curse upon mankind forever. They patients are the unknowing pawns of the cancer business, up front in every poster and billboard, sacrificing bodies, blood and lives. They adamantly defend the noble cause of cancer research and those who manage its billions of dollars of donated monies and time and will not believe otherwise.

What would these same cancer afflicted/survivors say or think if there were demonstrated remedies (for more than 100 years) already documented to stop cancer and completely reverse its effects? What would a family member of a recently deceased cancer patient think if the available alternative medicine cancer protocols, that could have possibly saved their lives, were deliberately excluded or allowed to even be mentioned or used by any doctor as a result of direct intervention by the AMA, FDA, ACS and other cancer business organizations? What would they then believe and think for themselves after this discovery?

In more simple terms, have the ACS and other non-profit cancer organizations, directly demonstrate how and where those charitable funds collected from the marathon runs, TV and radio telethons, yearly collections, etc. were all used to explore efficacy of alternative medicine protocols. Show where new studies were conducted long term on the unorthodox protocols and their results every year (for the last 100 years). Developing new anti-cancer protocols based on un-patented plants, new plant extract experiments, nutritional and diet education, etc. More than likely, this fantasy scenario will never occur. The collected monies most likely ended up in the same pockets of the conventional cancer medication manufacturers, cancer equipment companies and many other affiliates of the cancer business.

To the average layperson, they are unfamiliar with general medicine, health insurance, cancer treatments, antibiotic medications, dangerous vaccinations and other toxic medical experimentation and scams that are perpetuated on the general population on a regular basis. Humanity has generally been misled in this modern era. Chemical and pharmaceutical companies likely realized the cause and effect of degenerative disease formation (mostly caused by the western diet, poorly functioning bowels, exposure to pollutants and contaminants, etc.) long ago and have been slow to publicize them.

Your human body is a perfectly functioning biological machine. If it is maintained and fueled up regularly with nutritional whole foods (not processed), then your body will take care of itself. If it is supplied with clean water (not fluoridated or chlorinated) and you (the owner) keeps the many hazardous pollutants/contaminants (refined sugars, trans fats, etc.) from being ingested passively or actively, the possibility for developing any type of degenerative diseases is practically non-existent, barring exposure from radioactive material or carcinogenic toxins.

A simple analogy for you to visualize in your mind: in the course of a day, home meals are prepared and food residuals are temporarily thrown into the kitchen garbage bag, for later permanent disposal to the garbage container outside the home. This bag is preferably taken out each night in order to avoid attracting insects and rodents into the kitchen during the night. If the residual wastes are not removed out of the kitchen garbage receptacle every night, the kitchen normally develops a foul smelling odor by morning. If it lingers for two or three days and is not taken out, a very foul and rancid smell becomes noticeable. If after a week or longer the garbage still has not been taken out, then expect to have insects, putrid smells, rodents and neighbors visiting your kitchen to see what the source of the foul smell is coming from (a human corpse?). However, if the garbage is taken out daily, the scenario just mentioned will probably never materialize.

Your human body is not much different. If it's well taken care of, it will reciprocate. Ignore and abuse it and it will most likely develop some type of disease very quickly. Consumption of the western style diet has been linked to poor gastrointestinal peristalsis and the development of stagnant and putrid wastes. These subsequently can produce toxic secretions, blockages in the bowels and help create the anaerobic conditions required for the development of an acidic/cancer growing environment. Once a poor diet and acidic environment is established in

the body, the next natural step in the evolution is the manifestation of the disease (cancer?). Each individual holds the key to a healthy body, thus avoiding cancer itself. Proper diet and prophylaxis is a major key to cancer prevention, not ineffective surgical mutilation, radiation and chemotherapy poisons that ultimately lead to a certain demise of the human body and its spiritual occupant. Good nutrition, removal of wastes, maintaining an alkaline body and a functional immunological system, are some of the pillars for cancer prevention in the body. The more knowledge you obtain, the more conscious you become of your health situation and the available choices to be made.

In the forthcoming chapters, the individual developers, proponents, inventors and health professional's protocols are discussed with minor comments. In the final chapters, more in depth observations, opinions and conclusions are made for the reader's consideration. Ultimately, the cancer patient is responsible for making the best decision possible on their individual treatment plan, based on all the assimilated information that they have been able to compile from all available sources in the public domain. Only then can the cancer patient make an informed and educated decision for their individual cancer treatment program.

- Death by Modern Medicine by Dr. Carolyn Dean

## **Johanna Brandt (Grape Juice Protocol)**

**J**ohanna Brandt (1876 - 1964) was a South-African writer, nurse and naturopath who authored a number of books on natural health and other subjects. One of her best-known literary works was "***The Grape Cure***". It describes how she self-treated and remedied her own cancer (she had been diagnosed with stomach cancer and struggled to overcome it for nine years). She referenced that grape therapy had been used medicinally to heal ailments as far back as the 1500's. She dedicated and offered her book to humanity, as an alternative medicine (unorthodox) solution to curing cancer in the world.

Having battled her own cancer over the years, experimenting with different food fasting lengths, consumption of different foods and a variety of other protocols, she was ultimately able to overcome her stomach cancer and survived. She references having lost practically all of her body mass weight (practically a skeleton) as a result of her experimental fasting for extended stretches of time. She lost her mother to cancer and many in her family also suffered digestive ailments and other diseases. She concluded that there was evidence of a direct correlation between their heavy meat consumption diet, the manifestation of cancer and the other related diseases in the body (not hereditary or family genetics, but animal protein consumption).

Having recovered from her cancer, like so many other pioneers and healers who have an internal drive to help humanity, she embarked from her native South Africa on a quest to spread her health knowledge throughout the USA and world. It was nothing less than a cure for cancer and the potential to save many lives. Her mission was to

disseminate as far and wide as she could for the betterment of mankind's health. It was a righteous and honorable quest that is a common theme amongst those who share the traits of selflessness, empathy, service to others, and have a true love of humanity. Like others with cancer, her self-suffering and disease led her to embark on a journey of struggle, reflection, redemption and love. She was able to accomplish her healing and wanted to share her discovery and story so that others may benefit from her trials and tribulations, and avoid her same suffering.

Once arrived to the USA, she discovered there was a stern entrenchment in conventional cancer treatment protocols and even more resistance to any natural cures for cancer than she had previously anticipated. Regardless of the obstacles encountered, she pushed forward and began sharing her experience and protocols of how she used grapes to cure herself of the dreaded cancer disease. According to her, even the most critical patient cases of cancer that were near death, had an opportunity to recover, provided they followed the protocol.

Brandt was firm in the requirement that the patient could only consume the grapes and no other foods, except uncontaminated (clean) water during the treatment protocol. Also, the grapes should not contain any pesticides or other chemicals-preservatives that would be ingested into the weakened body, resulting in a slower recovery period. The process could take 6 weeks or more to have efficacy and that perseverance was needed to triumph over the disease. The first weeks were used to flush out the gastrointestinal system of putrefied wastes (toxins and pollutants) and then the eradication and expulsion of the cancer could begin. She found that the individual components - ingredients of the grapes acted as a natural poison to kill the cancer cells inside the body.

First though, the body would need to be tricked into a sense of hunger/starvation so that once any food (e.g. grapes) were introduced into the Gastrointestinal (GI) system, the cancer would seek out the food and ingest it, along with its natural poisons (a Trojan horse with poison). If other foods were ingested during this same six week period of time, the results would not materialize since the cancer would bypass the poisons in the grapes, for the other foods that were digested and more appealing. Water could be consumed copiously during this time, except for those periods of strict fasting (to starve out the cancer cells).

The many medical practitioners of her time, as is commonplace with every generation of conventionally indoctrinated physicians, balked at her claims to remedy cancer with grapes and refused to acknowledge or give her any validation. The evidence of efficacy lies not in any editorial opinion or orthodox medical article, criticizing the previously unknown method to heal a person, but rather validating the tangible and credible evidence and testimony of a recovered cancer patient that is resultant (a healthy human body) from its successful implementation and conclusion; there is the real evidence of efficacy or failure of a protocol.

To deny the case history that a terminally ill cancer patient was bedridden at home and waiting to die in their last few weeks/days, was healed with only grapes should be a crime unto itself. To not recognize its occurrence and then deny that the individual was now walking about as if nothing was ever physically wrong with them (after following and completing the grape cure protocol) should be a travesty of omission to the many other cancer sufferers who have no knowledge of this potential cancer remedy for their own manifestations of the dreaded disease. One must ask, who ordained these cancer cure sentinels as the unilateral guardians of knowledge, and to deny it to all mankind?

As witnesses to any crime provide testimony in a court of law (for the prosecution of criminal acts), then so should the cancer business sentinels who conveniently omit what they have witnessed (healing and subsequent suppression of the facts), so should they be prosecuted for their conspiracy to hide from mankind any effective cure to such a dreadful disease like cancer. Conventional medical doctors of her day were reticent in believing that a mere grape could cure a disease such as cancer. The arrogance of such educated physicians of her day is likely based on some type of an inferiority god complex and disdain that a woman could know any better than they in their conventional cancer and medical field.

Brandt was able to auto-experiment upon herself over many years, so that she could heal her cancer where the other doctors had written her off as terminal. Determined, she ultimately triumphed with her protocol and realized that a condensed protocol (requiring only several weeks) could replace her years of fasting and dieting experimentations. When she embarked on her mission to share her discovery, she did not expect to be marginalized by the medical community or have her discovery suppressed and buried. She was neither the first health practitioner, nor the last to come, that has experienced the oppression,

suppression and persecution by conventional medicine and their sentinels who are at the forefront. Whether it is to maintain the status quo of medical decorum, personal, commercial or economic gain, maintaining the reigns of power over others or some other inexcusable discourse, this is a prime example of documented persecution and the types of atrocities mankind has endured over centuries by the fearful sentinels and executives of the cancer business around the world.

Brandt was a brave and courageous woman, given that women practically had no legal say in anything at that time, including the right to be able to vote. She was no doubt, a pioneer and maverick on her own terms. One could speculate that once faced with terminal death and she survived the ordeal, there really wasn't anything else that anyone could do to her. This, I believe, set her free to accomplish her mission of love for humanity. Her grape cure protocol, simple and complex at the same time, have merit by today's standards. The fruit and seeds have individual components that have been demonstrated to contain antioxidants and anti-cancer properties in recent decades, thus validating her original conclusion almost 100 years ago. She was a cancer pioneer and was successful in treating and remedying many cancer patients. She did not have a medical license, but referred all her patients to a licensed medical doctor who could legally treat the cancer patients. Her "Grape Cure" protocol has been in existence for over 100 years. The ACS, FDA and AMA could benefit from this historical knowledge, but they are probably already aware of its existence and would rather it disappear into obscurity for another 100 years time.

**Johanna Brandt's Grape Juice Protocol (1-6 week process):**

- I. Consume ONLY grapes for first 1-2 weeks
  - II. Gradual introduction of fresh fruits and sour milk
  - III. Raw Diet- fruits vegetables, nuts, grains, honey, olive oil
  - IV. Add 1 cooked meal to menu
- 
- 1. Fast for 1-3 days, only clean water consumed, apply enemas daily if not having bowel movements to remove toxic waste buildup.
  - 2. No other food except grapes are consumed during the fast.
  - 3. Wash and consume two (2) to eight (8) ounces of grapes with skin and seeds at every meal (chew the seeds thoroughly) for 1-2 weeks.
  - 4. Start at 8 am, consume grapes at every two-hour interval (7 grape meals over 14 hours per day).
  - 5. ONLY clean water consumed copiously during this time.
  - 6. If too weak to eat grapes, can replace with unsweetened grape juice

- in order to tolerate and recover (tablespoon at a time).
7. Fresh fruit/sour milk are added gradually for 1-2 weeks.
  8. A mixed meal can be incorporated slowly in the final 1-2 weeks to strengthen the intestines ability to assimilate food.

Today it is known that there are about 1,200 plants that contain different levels of Amygdalin / Vitamin B17 (Nitrilosides) in their seeds. Grape seeds contain a high level of B17 and these have been identified as possessing cancer destroying properties. This provides one simple explanation for the grape juice fast efficacy. The additional ingredients in the grape skin and flesh contain additional anti-cancer properties.

The strategy of fasting the body to provoke hunger into the already hungry cancer cells even more, then feeding them sugary grapes with Vitamin B17 in it (Trojan horse containing a cancer poison) has been demonstrated as being effective. Subsequently the anti-cancer properties attack and kill the cancer cells as these digest and absorb the grapes sugars.

Johanna Brandt provided one of the first documented cancer cure treatments of the last century. She is also a role model for women everywhere that once fear is removed from the mind, no quantity of negative comments, opinions, obstacles or barriers placed in their way can keep them from obtaining their goals. The body will do whatever is commanded of it from a confident and determined mind.

**Otto Heinrich Warburg  
(Alkaline Environment Inhibits Cancer)**

**D**r. Otto Heinrich Warburg (1883-1970) was German, studied chemistry, medicine and received doctorate titles for each field. He is recognized internationally for his discovery in 1923 on the nature and mode of action of the respiratory enzyme in the human body. Subsequently, he was awarded the Nobel Prize for his scientific research in 1931. He was instrumental in discovering the interrelationship between oxygen, sugars, fermentation and alkalinity as it relates to the development of a fertile environment for the clinical development of cancer in patients. From his lecture to Nobel Laureates in Germany, 1966:

*“Cancer, above all other diseases, has countless secondary causes. Almost anything can cause cancer. But, even for cancer, there is only one prime cause. The prime cause of cancer is the replacement of the respiration of oxygen (oxidation of sugar) in normal body cells by fermentation of sugar. “*

*“In every case, during the cancer development, the oxygen respiration always falls, fermentation appears, and the highly differentiated cells are transformed into fermenting anaerobes, which have lost all their body functions and retain only the now useless property of growth and replication. Thus, when respiration disappears, life does not disappear, but the meaning of life disappears, and what remains are growing machines that destroy the body in which they grow. “*

*“All carcinogens impair respiration directly or indirectly by deranging capillary circulation, a statement that is proven by the fact that no cancer cell exists without exhibiting impaired respiration. Of course, respiration cannot be repaired if it is impaired at the same time by a carcinogen.”*

Through his many years of research and experimentation, he concluded that cancer does not require oxygen to survive, but rather sugar (fermented) for energy/food. If his conclusion is interpreted correctly; if the human body maintains an acidic environment (anaerobic) that is necessary for cancer growth, then the development of cancer cells is likely manifested. If, however, an alkaline environment (more aerobic/oxygen) is maintained, then the cancer cell cannot survive or thrive. That oxygen deprivation of the cells and acidosis of the body are directly correlated as catalysts in the development of cancer.

His discovery, more than 80 years ago, was a great contribution to the study of cancer (anaerobic fermentation). At the very least, it helped to firmly identify the enemy (cancer) and pave the way to develop a comprehensive strategy to prevent against its initial formation and also, how to combat it effectively once developed in the human body. A modern day school of thought that has grown in the last decades is that western diets contain excessive foods that cause acidity in the body. Animal proteins, dairy products, processed foods, carbonated drinks, refined foods and many sugary products are all believed to promote a healthy environment for the development of cancer cells (acidic) and other degenerative diseases in the body. These presumptions have been studied extensively and support the conclusion that having a natural and balanced diet is probably sufficient enough to prevent its development (assuming there are no other environmental factors like radiation or exposure to carcinogenic pollutants/contaminants involved in the cancer development process).

Strong evidence to support this position is provided in the book, ***“The China Study”*** by T. Colin Campbell, PhD. There is also a documentary movie by the same name available on the internet that provides personal interviews and direct insight on the solid findings of the book. There are multiple sources that have independently concluded that the western diet is a major contributor, if not the main cause, of cancer development today. It is likely that the commercial food industries have their full time partisan scientists and academics on call to challenge, and try to discredit any scientific studies or public reporting that contradicts their marketing positions (promoting the idea that animal meats, dairy products, sugars, processed and refined foods do not contribute to the formation of any diseases or cancer). They are cognizant and prepared to defend against any negative report that may potentially impact their product’s market share of consumer purchasing dollars.

The resurgence of the naturalist movement (eating healthy organic whole foods, no antibiotics, drinking clean, distilled/reverse osmosis water free of toxins or chemicals and avoiding toxic pollutants) to recover and maintaining a healthy body, have latched on to Dr. Warburg's scientific discovery about alkalinity and its effect on neutralizing systemic acidosis in the body.

***“No disease, including cancer, can exist in an alkaline environment.”***

***– Otto Warburg***

The naturalists have embraced the concept and have promoted organic foods (no animal proteins, dairy products, trans fats, processed or refined sugary foods) to reduce the intake of acid forming foods in the body, thus reducing the potential for the formation of an anaerobic environment that may be conducive to the development of cancer cells and degenerative diseases within the body.

Despite the denial by the food industries, and it's partisan academia experts, spokespersons or any other type of direct or indirect affiliations to them, enough research has been shared publicly (especially by insider whistle blowers) to give credence and validity that a more reasonable approach to dealing with cancer is in preventing its formation from the onset with proper diet. Not the post response (surgery, radiation, chemotherapy and suffering) which is the end result for most people who have come to trust (erroneously) that government and corporate industry are focused on keeping the world population healthy with nutritional foods and safe from the development of any cancer or other major diseases.

Dr. Warburg did not espouse any individual treatment protocol to remedy the different types of cancers that develop in the human body. He identified something much more relevant to treat not only cancers, but basically all diseases formed from a weakened immunological defense system and a dysfunctional Gastro-Intestinal (GI) system.

***“Unlike the prevention of many other diseases, the prevention of cancer requires no government help, and not much money.”***

***– Otto Warburg***

The identification of the root cause of cancer cell formation (acidic and anaerobic environment in the GI system) and its subsequent feeding mechanism (fermentation) was critical. If these factors were removed from the initial developmental stages (e.g. cleaning out the intestines of putrefied wastes/toxins and increasing the oxygenation to them), cancer would have no place to manifest and propagate itself in the body as it would have a healthy and strong immunological defense system in place. A remarkable discovery that led to his Nobel Prize award.

**Dr. Otto Warburg's conclusions to prevent cancer formation:**

1. Maintain an aerobic environment (oxygenated) in the body
  - a. Consumption of ozonized water (present day suggestion)
  - b. Increased oxygenation-inhalation (present day suggestion)
2. Maintain an alkaline environment (non- acidic)
  - a. Consumption small amounts of baking soda with water (present day suggestion)
  - b. Consumption alkaline forming foods (e.g. cantaloupe, mineral water, pumpkin seed, asparagus, strawberries, parsley, pineapple, cayenne, etc.) – (present day suggestion)

**Rene Caisse  
(Herbal Tea Protocol)**

**R**ene Caisse (1888-1978) was Canadian, a nurse (R.N.) by profession and recognized for helping thousands of patients cure their cancers. She is said to have received the original herbal formula protocol orally from an English female patient while she was working in the hospital. The English woman claimed to have been stricken with terminal breast cancer some 30 years prior and was expected to die at that time. She was offered medical assistance and treated by a previously unknown Indian medicine man that learned of her plight. The woman said she did not know what tribe the medicine man originated from when she was living in the mining camp, but was grateful for having been cured of breast cancer and saving her life. The conventional medicine doctors could not do anything for her when she was diagnosed and was not expected to survive for much longer before the medicine man arrived.

Caisse would mix the herbs (four types of plant herbs and then expanded the recipe to encompass the original eight different plants in latter years indicated by the medicine man) and have the cancer patient drink the decoction daily until they were cured. The decoction was made exclusively from a few common garden plants. Caisse never claimed she cured any cancer, her many cured cancer patients made them for her. The premise of the herbal mixture was that it would correct any malfunctioning immunological defense system in the body to perform optimally. Once the body was functioning normally again, it would directly (naturally) attack and eliminate the cancer cells from the body, not the plants in the herbal formula. Only a strong immunological system could attack and kill the cancer within itself.

In conducting research about Caisse and how she began to help relieve the suffering of many cancer patients in Canada, a few common themes consistently rise to the surface (and continually repeat themselves) between her and many other selfless healers around the world:

- (1) The personal desire to help relieve the physical suffering of mankind by the inventor/promoter.
- (2) No real interest in personally profiting monetarily by attempting to create an economic monopoly for the product.
- (3) Rejecting lucrative business proposals when the anti-cancer protocol is not given to humanity at low cost (or free).
- (4) Medical, pharmaceutical and governmental intervention to suppress, shutdown, arrest and persecute the individuals who treat and cure cancer patients with alternative medicine at all costs, regardless of any demonstrated medical efficacy in curing different cancers or direct medical benefit to the cancer stricken population.

The Memorial Sloan-Kettering Cancer Center (SKCC) in New York (promoted as being the world's largest private cancer research facility at the time) and the National Cancer Institute (NCI) are just two organizations that were referenced as having been in contact with Rene Caisse, with the intent of obtaining the formula and evaluating the Caisse tea (Essiac® was the name given to her herbal concoction and is her last name spelled in reverse) for anti-cancer efficacy. As best can be discerned, SKCC reportedly found no benefit to the Caisse herbal tea mixture with the dosage/concentration that they utilized in their evaluations. Their research study appears to have publicly ended at that time, discrediting the efficacy of the tea, without further public interest in it. Interestingly, it was reported that SKCC never used the correct dosages provided by Caisse in their research studies, practically guaranteeing that positive results would never be achieved. This would suggest that SKCC's tests worked more to suppress than validate its efficacy. Perhaps their position in the cancer business was a factor?

Caisse is reported to have conducted her first anti-cancer experiment with a family aunt that had succumbed to stomach cancer and that had been diagnosed with only 6 months remaining to live. After consuming the Caisse herbal tea formula for a few months, her aunt had a full recovery and lived for another 21 years. Similarly, her mother was also diagnosed with liver cancer at age 72 and given only a few short days life expectancy by her medical doctor. After being successfully treated with the Caisse herbal tea, she lived another 18 years cancer free.

After having experienced firsthand the effectiveness of the tea, Caisse joined efforts with a Doctor named R. Fisher and began helping all types of terminal and non-terminal cancer patients in Canada. Many survived and lived cancer free the rest of their lives. Others had improved quality of life and increased life spans (in contrast to the short life expectancy period given by the hospitals for the terminal cancer patients). Some patients, however, were too far advanced with cancer spreading in their main organs that they were passed the point of return to experience any type of hope for a successful outcome. The hospitals sent them home to die after it was determined there was nothing else that could be done for them with any additional conventional cancer treatments (more toxic chemotherapy). However, there is reference that these types of terminal patients were able to reduce their pain levels, decrease the consumption of chemotherapy medications and improve their quality of life with Caisse tea use.

As the years progressed, Caisse was able to develop an injection to complement the oral ingestion of the tea, but is reported to have been too painful to the patient and shelved as an alternative treatment option. Word of mouth eventually got out to the public about a miraculous cancer cure that was being administered by Caisse in Canada. The Mayor and council members of her hometown in Bracebridge, Ontario allowed a cancer clinic to be opened and operated by her. She could not, however, charge any fee for her services. After several years time, the Canadian Ministry of Health intervened and threatened to have Caisse arrested if she did not shut down her clinic and stop treating the thousands of cancer patients with her garden herbs. The Government of Canada is reported to have passed a law (giving her an ultimatum) requiring full disclosure of the Caisse herbal tea formula to the government or be arrested.

Only by submitting the herbal tea formula for laboratory analysis, would the government “consider” not closing down her clinic. Out of fear of incarceration, she closed down after eight years of successfully treating all types of cancer patients, by the thousands. It is reported in her writings that she fully believed the government only wanted the formula to market it for profit with pharmaceutical companies and would shut down her clinic, regardless. She would not submit the information and the public outcry against the Canadian Government was noted in petitions, news reports and direct communications with government officials during this confrontation period between her and the government of Canada health representatives.

During the many years, business proposals came in to Caisse, wanting to market the Caisse herbal tea for the treatment and cure of cancer. After requiring that the tea be made available for low cost to humanity, she signed a business contract that is referenced as never having paid any royalties to her. Her premonition that the cancer cure tea would be suppressed or hidden away seemed to have come true. The Caisse herbal tea protocol is not widely known, except for those extraordinary individuals who have been cured of cancer by it, and those individuals who have firsthand knowledge of the medicinal effects against cancer that it showed. There are only a few individuals (Mrs. Mali Klein for example) that have the complete herbal knowledge and know how, to continue her lifelong work after Caisse passed away.

In subsequent years, the formula (4 herbs) was increased to encompass the original eight (8) plants/herbs overall. It has been claimed that there were originally eight herbs in the Indian medicine man's formula, but only four were publicly known. The original four plants are the main ingredients and have been promoted as an effective, stand alone, combination. Quality of plant selection was stated as paramount and not to substitute any herb in the formula for lesser quality.

Rene Caisse chronicles in her book ***"I Was Canada's Cancer Nurse"*** that she received multiple offers to work with different medical doctors in Canada and the USA. Most offers, however, appear to have wanted to build up their medical practices and research on her coat tails. She ultimately stayed in Canada where she was at home and could continue to help cure cancer in humans, vice curing mice and animals in the research laboratories that they wanted her to work on full time. She indicated she would rather help her neighbors and humanity than to be working on animal specimens.

Caisse mentions in her writings that she has never claimed to cure cancer, but that her patients made those assertions. Even though she publicly claimed not to cure cancer, conventional medical doctors, medical organizations and government agencies made certain to suppress, intimidate and persecute her on many occasions. It is a wonder how she did not succumb sooner to these types of external pressures from the cancer business, given her modest income and lifestyle. It is a testament to her character that she could have lasted as long as she did, practically defending herself alone against the cancer business and its sentinels.

What of Caisse herbal tea today? There are multiple producers of products that similarly claim their teas are the same as her herbal tea. The Canadian and American governments continue to view this naturally plant derived product as publicly non-effective against cancer. It is not licensed to be sold as a commercial cancer cure medicine, but this has not stopped individuals from producing it for self-use, for decades. Her many terminal cancer patients that survived by using her herbal tea have attested to its efficacy, despite the different government's public proclamations. Conventional medical practitioners and the conventional cancer businesses organizations have asserted that the tea is ineffective as a cancer remedy. Her thousands of cancer patient survivors would likely take offense to those partisan declarations, especially those who may still be alive today. The available reference material and in depth knowledge about the Caisse herbal tea recipe are generally sparse. The four (4) \*public and eight (8) original plants referenced by Rene Caisse to make the tea are:

1. \*Dry Sheep Sorrel – **Complete** (Rumex Acetosella)
2. \*Greater Burdock - **Root** (Arctium Lappa)
3. \*Dry Slippery Elm - **Inner bark** (Ulmus Rubra)
4. \*Turkey Rhubarb - **Root** (Rheum Palmatum)
5. Periwinkle
6. Red Clover
7. Water Cross Root
8. Gold Thread (Coptis Genus) or can use Goldenseal (Coptis Groenlandicum) as a replacement.

It is interesting that an herbal decoction of common, garden variety plants could compete with dangerous radiation and toxic chemotherapy to treat cancer for a few cents/gallon vice tens of thousands, if not hundreds of thousands of dollars for conventional cancer treatment. Also, that there are no secondary effects using the Caisse herbal tea in comparison to the often lethal side effects of radiation therapy and toxic chemicals that are injected into the human body. The traditional conventional medicine cancer treatment regimen statistics demonstrate an occasional increase in longevity of the patient, but ultimately succumbs to the side effects of radiation, toxic cancer medications and spreading of metastasis to other areas of the body.

Analyzing the research literature, the herbal tea appears to strengthen the body's immunological defense system so it can attack the root cause of the cancer, while chemotherapy attacks the symptoms (and the

patient). Conventional cancer protocols do not appear to offer any real hope of a lasting cancer cure since they do not normally attack the root cause of it from the onset.

In summary, Rene Caisse was able to demonstrate the efficacy of her natural Caisse herbal tea, not only with clinical studies, but more importantly, with the thousands of patients who experienced full or partial cancer cures and lived decades longer, utilizing the herbal protocol she espoused.

**Rene Caisse's herbal tea for cancer protocol is taken:**

1. Dilute 1 ounce of refrigerated mixture in 2 ounces of boiling water.
2. Drink before going to bed at night, sip slowly, do not gulp down.

Recipe for 1 person, 30ml/1 ounce daily x 15 months supply:

- (1) ***Sheep Sorrel*** (Leaf, stem and root together): 80 grams **powdered** (60g leaf/stem + 20g root), Most important ingredient in the tea mix.
- (2) ***Greater Burdock*** (Root only, **chopped** while fresh/soft or will harden): 120 grams.
- (3) ***Slippery Elm*** (Inner bark, **powdered**): 20 grams.
- (4) Turkey Rhubarb (Root, **small pieces or powdered**): 5 grams.

The above equals 225 grams of thoroughly mixed, pre-prepared dry tea herb. Store powdered herbal mixture in a cool, dark location in a glass jar with sealable lid until needed to produce a pot of tea.

To make 30 days of decoction tea at once, weigh out 15 grams of the above combined herb mixture and mix with 1.5 liters of pure water (not tap or treated), boil all utensils and stainless steel/glass cooking pots to sterilize prior to producing tea. Bring mixture to a rolling boil (not full boil) for 10 minutes, remove from heat source and allow to steep (settle) for 12 hours at room temperature, undisturbed.

Very important to sterilize all cooking items and storage bottles to prevent mold growth in tea (it does not contain any preservatives).

Final step is to re-heat after 12 hours to reach the point of making steam, shut off heat source and pour tea into dark glass bottle containers (do not strain, keep sediment in bottles equally) and refrigerate immediately. Do not microwave or freeze tea, it destroys its natural properties. If biological growth or rancid smell occurs after a

few days, dispose of tea, it was contaminated in the cooking process. As an option, smaller daily/weekly quantities can be made with proportional herb and water mixtures to help reduce any possible mold growth in bottles.

**Royal Rife**  
**(Frequency Wavelengths Protocol)**

**R**oyal Rife (1889-1971) was an inventor from the USA, had no university education, yet had superior empirical knowledge to develop and patent a high intensity microscope lamp which could detect and observe live bacteria and virus that were previously undetectable with existing optics of the time. The lens had the capability to magnify microbes up to 60,000 times their normal size while they were still alive. He also invented a machine that could kill bacterial and viral pathogens that caused diseases, without the use of medications, antibiotics or chemicals.

Utilizing resonant wavelengths, Rife was able to determine individual spectroscopic frequencies for each bacteria or virus organism. He in turn used these individual frequencies to identify and categorize each unique microbe. Subsequently, by using single frequency waveforms, he was able to repeatedly destroy any individual microbe species by changing its vibrational frequency (resonant frequency) with his one of a kind invention. He was able to observe these effects utilizing his high intensity microscope, where it had previously been impossible to do so in the scientific community.

The frequency waves would increase their oscillations until the microbes were literally shaken apart and destroyed. This process was called the Mortal Oscillatory Rate (MOR) of microbes. He catalogued hundreds of different bacteria and viruses during his many years of research, including the individual MOR frequencies that corresponded to their specific mortality (specific frequency resulting in death).

He was able to effectively demonstrate his invention to the medical community and cured the many test subjects (all varied types of sicknesses, including cancer) he was given by the skeptical medical doctors, without any secondary damage to the patient's tissues. He basically invented an instrument that could kill practically all bacteria or virus that could cause infection in the human body. The ramifications of his medical invention would be worldwide treatment and eradication of practically all human diseases that ever existed. An amazing accomplishment for any individual. The book – ***"The Cancer Cure That Worked"*** by Barry Lymes describes Rife in more detail.

If his equipment were to be approved for the treatment of diseases by the FDA or other health Ministry around the world, this would mean that pharmaceuticals would no longer be needed to treat practically any disease. A few minutes of applying resonant frequency (MOR) to each patient would be all that was needed to recover from any disease process. The pharmaceutical industry would experience a significant reduction in sales of the toxic chemicals and ineffective antibiotics used to treat patients around the world. Basically, the economic collapse of the pharmaceutical industry and a new holistic approach to medicine would be born as the preferred treatment of choice vice x-rays, radiation, surgery and chemotherapy for cancer patients.

Rife was able to successfully and consistently repeat his experiments to many doctors, where he would demonstrate the effective killing of many bacterial and viral pathogens like tuberculosis, different cancers like carcinoma & sarcoma, typhoid, tetanus, spinal meningitis, cholera, diphtheria and all the other broad spectrum of diseases. It is mentioned that he was given high praises from the doctors and scientists at the time for his miraculous invention and many were eager to implement the protocol for healing patients in their own practices, once they had been convinced of its merits. Rife treated many cancer patients and was able to successfully demonstrate its medical efficacy, without harming the patient, to the medical community on repeated occasions.

Unfortunately for Rife, the American Medical Association (AMA) was being run by the infamous Morris Fishbein at the time. He was the advertising/marketing director of the AMA. It is stated that when Fishbein offered to buyout Rife's invention and the offer was rejected, Fishbein and his associates at the AMA took exception to his negative response and the AMA took on an aggressive posture against Rife. They retaliated against Rife and attempted to undermine, discredit and

suppress his research and scientific studies at every opportunity. It is reported that multiple break-ins to his laboratory resulted in the theft of parts to his equipment, priceless accumulated research documents and experiments were taken from his lab, arson fires were set, trivial lawsuits by the AMA, and other travesties against Rife were made constantly. The AMA also appears to have exerted pressure on the medical doctors who were working with him at the time, to abandon their cooperation or they may find themselves battling against the AMA directly also to hold onto their medical licenses. Most abandoned Rife for fear of retaliation from Fishbein and the AMA.

Ultimately, over the many years of litigation and persecution, Rife suffered under the financial and psychological pressures the AMA had imposed on him and he retreated into obscurity. The crux of his story is he invented a machine that could cure practically every bacterial and viral disease known to mankind. It is also reported that pressure from the AMA (since Fishbein and his associates could not buy or profit from Rife's invention) was exerted by continually suppressing knowledge of his invention, discrediting its efficacy and denying the positive patient recoveries experimented at every opportunity. The publicly available research literature chronicles that Rife was relentlessly pursued by the AMA until he finally succumbed and gave up his research into curing mankind's cancer and all other ailments, to the detriment of mankind.

Can Royal Rife be one of the greatest medical inventors known to humanity? If in fact he invented a machine to cure cancer and all known diseases (which all literature indicates he did) then the worldwide impact caused by the suggested greed and abuse of a single group of individuals at the AMA should be considered a crime against all humanity, past, present and future. How many lives (babies, children, teens, adults, seniors) of so many beloved and brilliant people could have been spared the needless suffering and trauma of being afflicted with any disease, including the variations of cancer? Taking this historical (past, present and future) perspective, it is possible that Fishbein may be one of history's most horrific mass murderers by omission that the world has never known?

No other person in history could come close to the medical ramifications Rife had discovered in his day. Nothing less than the achievement of eternal health of mankind and treating cancer for only the cost of electricity and an attendant operating the machine. How does that price compare to hundreds of thousands of dollars in surgery

and chemotherapy, and needless suffering by individuals who contracted cancer from that time period to present day?

The rhetorical question is: are all institutions (any kind) to be held in high regard and from reproach in the public eye, if they stand for righteous endeavors? Should they be scrutinized for improprieties if they are susceptible to abuse by those who are corrupted by power and greed who run them? Who has been designated as the sentinel and eternal guardian of medical cures for mankind or is this a self elected position? Does selfish profiteering by an individual or a magazine journal advertisement business usurp the health needs of humanity?

One has to ask, where are the ACS, FDA, AMA and other cancer business organizations today in regards to Rife's invention? Presumably, analysis has already been conducted and Rife's invention was discarded as hocus-pocus medicine, not worthy of evaluation by independent (e.g. cancer business interested entities) organizations. To investigate and find the Rife machinery was successful, the pharmaceutical and chemical industries involved in antibiotic manufacturing and medical instruments would be equivalent to Japanese Seppuku/Harakiri (ritual suicide) and suffer complete economic collapse. This would be an acceptable loss in the name of humanity. Human life and happiness is more important than loss of money, monetary greed and perpetual human suffering and misery.

If such an invention were to be made in today's modern world, no doubt the same outcome would await the fool who attempted to save humanity from diseases of all types. The AMA, FDA, ACS and other organizations would be waiting to pounce on anyone who dared challenge the cancer business monopoly publicly. The invention would need to be patented in the international community so that it could not be suppressed in the USA by the cancer sentinels, who are always vigilantly on guard.

The historical research indicates that Rife never had an administrative chance to succeed. The cards were stacked against him and he never had a clue about the threat when he first started his work. Since the onset, the suppression tactics were in place (AMA with board oversight of the medical doctors and the FDA's strong arm of compliance) to ensure Rife's invention could not get the positive exposure or public awareness needed for it's ultimate dissemination into public health treatment.

**Royal Rife's Frequency Wavelength Protocol:**

1. Purchase a commercial variant, make your own or see a service provider for more information.
2. Determine the degenerative disease, bacteria, virus, fungus, etc.
3. Set the Rife Frequency to match the disease (MOR) on body site.
4. Irradiate MOR frequency as needed, repeat as necessary.

**Wilhelm Reich  
(Orgone Energy Protocol)**

**D**r. Wilhelm Reich (1897-1957) was from Austria, studied medicine and became an MD. He studied psychology/psychoanalysis and worked with many institutionalized patients during the Dr. Sigmund Freud era.

Dr. Reich was also an inventor and created equipment for the treatment of cancer, as well as dabbling in subjects such as weather science - cloud busting, human sexuality and other areas. He claimed to have discovered an invisible energy source that he termed “Orgone Energy”. It was not electrical or magnetic in nature, but something else. This energy was different than all others that he had previously known. He ultimately designed, developed, constructed and experimented on cancer patients successfully, utilizing his self-made Orgone accumulator unit.

The main premise behind his unorthodox approach to cancer treatment was the belief that the human body has an energetic disequilibrium (physical and psychological), thus causing sickness. The resultant effect of this energy imbalance is the physical manifestation of diseases like cancer. He believed the positive effect that invisible orgone energy had on all things in the environment could be used against cancer, negating and ultimately reversing its physiological damage. In the case of his cancer patients, it was reported that he was able to help them improve their quality of life, but the psychologically dysfunctional component (sexuality) had to also be treated. As with other health pioneers who were able to completely cure or significantly destroy cancer, he never claimed to heal cancer, but rather identify and work on the subconscious factors that were causing an unhealthy body.

His orgone accumulator unit was a box like design, wherein the unclothed patient would be placed inside seated for a set duration of time (30 minutes) and would have a treatment regimen based upon their individual medical diagnosis. During this treatment period, the orgone energy concentration would accumulate three to five times inside the accumulator (in comparison to the exterior atmosphere concentration) and the orgone energy would slowly penetrate through the patient's exposed skin. This would result in more effective absorption of orgone energy into the patient, thereby positively charging the erythrocytes biologically in the blood.

Reich surmised the correlation between physical manifestations of cancer (and related ailments) was directly linked with psychological afflictions. Mostly, he determined these were related to sexuality and intimate relationships that were dysfunctional, or the patient lacked adequate education on human sexuality, sexual intercourse, or the associated sexual energies of the human body. ***“The Cancer Biopathy”*** provides more in depth analysis of his practices.

Dr. Reich demonstrated he was able to treat his patients using orgone energy and they each improved their health over time, simply with the use of the orgone accumulator. He would also observe patients that had physical debilitation relapses, without having any physiologically associated reason for its reemergence. Over time, he would rule out other possible causes for the relapses and concluded in many instances, that it was psychologically manifested with the root cause of the cancer being associated with sexual dysfunction in many cases.

Dr. Reich's research and studies point toward the human mind/sexuality and the manifestation of cancer, through the imbalance of orgone energy that negatively affected the human body. This, albeit a very unorthodox approach to cancer treatment/cure, contributes to the broad spectrum of causes of cancers. Once a root cause can be identified for the development of cancer, it becomes much easier to focus on effective countermeasures to impede its formation, development and physical manifestation.

In those cancer patients where there was no clear physical root cause of its development present, this alternative medicine protocol may be of benefit in conducting a differential diagnosis. If there is no physical catalyst, there may be a psychological component or energy insufficiency in the patient that can manifest as any type of cancer.

The process of using orgone energy (irradiation) is to sit inside the orgone unit with as little clothing as possible in order to maximize penetration of the energy into the body (clothing is allowed, but takes longer to penetrate) and expose for 1-30 minutes. During this period of orgone irradiation, the body can become warmer, skin temperature heats up and a heat rash may develop, etc. Patients have stated they have more energy, their body is stronger and most have significant decreases in bodily pain as a result of irradiation exposure inside of the orgone unit.

Dr. Reich was a man with many abilities in different fields like psychoanalysis, weather science, medicine, etc. However, when the AMA/FDA deemed he had passed their unilateral line of treating cancer patients with his orgone unit, his protocol was summarily suppressed and he was persecuted.

The FDA burned thousands of his books publicly. He was also arrested and incarcerated in Federal prison. He died days before being released from prison when he was 60 years old. The injustices Dr. Reich experienced by fearful and retaliatory agencies such as the FDA-AMA-ACS are just another documented example how far the sentinels of the cancer business (monopoly) are prepared and willing to go in order to maintain their status quo and grip over the cancer patients of the world.

Individuals are easily separated from the herd and culled. When the herd stands fast as a single entity and front, the predators have little chance of dividing and conquering the herd, one by one.

**Dr. Reich's Orgone Energy Protocol:**

1. Purchase a commercial variant of an orgone generator, make your own or see a service provider for more information.
2. Sit inside of orgone accumulator unit for 1-30 minutes.
3. Repeat as necessary over days-weeks-months to improve health.

**Harry Hoxsey**  
**(Herbal Tonic & Salve Protocol)**

**H**arry Hoxsey (1901-1974) was an American businessman who embarked on a personal mission to help cancer patients. The origins and history of how the Hoxsey herbal mixture came to be varies, depending on the source of the information. One claim is that it was his grandfather, or great grandfather, who discovered the anti-cancer properties of certain plants on his farm. The story goes that after observing his horse with terminal cancer eating certain plants, and completely curing itself within a few months, he realized there was something in the plants that cured the cancer naturally.

It is reported that the formula was passed down to John Hoxsey Sr. (grandfather) to John Hoxsey Jr. (Harry's father) and ultimately to Harry when his father was on his deathbed. Harry was sworn to share the herbal formula with humanity and never refuse anyone the herbal mixture to cure cancer, even if they didn't have money to pay for it. This is how it has been reported publicly (in general terms) on how the Hoxsey herbal mixture came to be from the onset.

As Hoxsey was not a medically trained doctor, he could not legally treat patients for cancer. He, however, became a Naturopathic Doctor (N.D.) and began to open and manage his Hoxsey Clinics around the USA with medical staff. At one point, he was operating 17 clinics in the United States and they are estimated to have treated between 25,000 to 75,000 cancer patients before being shut down. The Food and Drug Administration (FDA) closed all of them on the same day, all around the country when they decided to shut him down.

In those many years of operating his clinics around the country, Hoxsey was arrested countless times and is reported to always have \$10,000 in his possession in order to bail himself out of the many jails in which he was placed. He was constantly arrested for practicing medicine without a license and subsequently found not guilty in court. In one instance, it is said that a prejudicial prosecutor, who had constantly arrested Hoxsey over the years, came to him one day because his brother had been diagnosed with cancer. Hoxsey is claimed to have healed the prosecutor's brother of cancer and from that point forward, was completely convinced of Hoxsey's protocol to cure cancer. It is reported the prosecutor never persecuted Hoxsey again and became an advocate for his cancer treatment protocol.

The American Medical Association (AMA) is reported to have been the major cause of Hoxsey's many confrontations with the police and courts of law. It was reported that the AMA had offered to buy the rights to the Hoxsey herbal formula used to cure cancer, but when Hoxsey requested that the herbal mixture be made available to everyone, even those who could not pay for it was rejected by individuals associated with the AMA, they became angry and retaliated (Morris Fishbein and his associates for example, are referenced as the central figures who were attempting to purchase the formula).

Hoxsey, ultimately is reported to have rejected the business proposal and walked away from the deal. He claimed that he had made a promise to his father/grandfather and would not break that promise. This is where, according to research, the epic battle between the AMA/Fishbein and Harry Hoxsey began and lasted for many years and cost many hundreds of thousands of dollars. The same Morris Fishbein advertising executive from the AMA, associated with the suppression and persecution of Royal Rife in Chapter 5 and the AMA with Dr. Wilhelm Reich in Chapter 4.

After it was all said and done, Hoxsey was vindicated and the AMA was chastised for blatant and overt persecution of Harry Hoxsey and his herbal mixture used in treating cancer patients by the judicial courts system. The many thousands of patient testimonials being cured of all types of cancer are by themselves, a testament to its efficacy. They are also useful as a gauge, used to vindicate Hoxsey and his alternative medicine cancer treatment protocol. It should not be an irrelevant scientific method, business plan or earnings per patient analysis of whether a protocol is effective or not for public use, but its efficacy.

Some of his books – ***“Hoxsey Therapy: When Natural Cures for Cancer Became Illegal”*** and ***“You Don’t Have to Die”*** provide insight into the activities of the time against alternative medicine and the challenges against its practitioners. It is a testament to Hoxsey’s fortitude to help his fellow man overcome their cancer diseases.

How can any individual, unilaterally, claim efficacy or failure of any drug without having supporting evidence? By any standard, it would be patient histories and mortality statistics after using the Hoxsey herbal medication. If thousands of patients write and submit testimonials that their terminal cancer was cured using the herbal mixture, and lived for years and decades without reoccurrence, that should be considered a very legitimate and compelling indicator of efficacy. By present standards, the most a terminal cancer patient can expect on average is a maximum of 5 years life expectancy (best case expectation) using conventional protocols (surgeries, radiation, poisonous medications and repeating the treatment cycles repeatedly until deceased, etc.).

Most however, do not last past a few months/years, depending on how the patient mortality statistics are compiled and categorized by the cancer business. If a patient is identified as completing the conventional cancer treatment protocol and survives up to 5 years, he is deemed a cured patient. If however, the patient dies while still taking cancer treatments before the end of 5 years, the mortality statistic can be skewed to reflect the patient never completed the conventional cancer treatment protocol, thus should not be included in the ineffective statistics treatment category, thus skewing the overall statistical results in favor of conventional cancer treatment protocols (and the cancer business overall, etc.).

Hoxsey also used salves (applied topically to the skin) to treat skin cancer in patients. The salves would penetrate deep into the skin layers, cause a cellular reaction and force the cancer cells to be killed/expelled onto the surface of the skin and form an escharotic scab. When the escharotic scab would fall off naturally (with all the dead cancer cells attached) within 1-2 weeks, it would leave behind a large hole (devoid of cancer cells) and leave only the healthy cells behind. The dermatological skin hole would subsequently fill in with new cells and heal within a few weeks. If there were any residual cancer cells detected, the process would be repeated until the remaining cells were removed. This process is still in underground use today.

In analyzing cancer treatment protocols like Hoxsey's and others, who determines public availability and by what means is it scrutinized? The default mechanism seems to inherently fall back on the unreliable scientific method. How can the scientific method of analysis even be considered relevant when it does not even recognize or accept thousands upon thousands of Hoxsey's successful human patient case studies as evidence and prefers to hide its head in the sand like an ostrich, only allowing the double blind tests as "acceptable" scientific evidence of anti-cancer efficacy?

Not only is the scientific method unworthy of relevance in today's world, but any doctors or scientists who blindly only accept and advocate for use of this method are also obsolete and should consider new career fields. Unfortunately, the scientific method is one of the major shields the cancer business hides behind with the FDA. They try and undermine, discredit and claim alternative medicine protocols are "unscientific" and therefore are unreliable for human safety. That they have not undergone a \$500 million dollar peer review / laboratory research investigation to validate an un-patentable garden plant is effective against cancer. Only a synthetic and patentable drug is capable of curing cancer (myth).

As every dictator and authoritarian ruler around the world knows, claiming there is democracy to the citizens of the country is suffice. If any citizen does not believe there is democracy in the country, please step forward and raise your hand. The illusion of democracy is not the same as actual democracy. The illusion of medical treatment choices in cancer protocols is just that, an illusion and safeguarded by the international cancer business sentinels and their allies.

The following are the individual ingredients identified in the Hoxsey herbal (oral) mixture by the Journal of American Medical Association (formula not validated by Hoxsey), June 12, 1954 and each 5cc contains approximately:

1. Potassium Iodide\* 150 Mg (inorganic component)
2. Licorice Root 20 Mg (organic plant)
3. Red Clover 20 Mg (organic plant)
4. Burdock Root 10 Mg (organic plant)
5. Stillingia Root 10 Mg (organic plant)
6. Barberry Root 10 Mg (organic plant)
7. Poke Root 10 Mg (organic plant)

8. Cascara Sagrada 5 Mg (organic plant)
9. Prickly Ash Bark 5 Mg (organic plant)
10. Buckthorn Bark 20 Mg (organic plant)

\*Potassium Iodide is referenced as the inorganic ingredient that was targeted by the Food and Drug Administration (FDA) as a medication in Hoxsey's herbal mixture formula as a dangerous/drug. That it was being prescribed without a medical license. This component was apparently the pretext (excuse) for targeting and persecuting Hoxsey, closing down the clinics in conjunction with the complicity of Morris Fishbein at the American Medical Association (AMA).

If Hoxsey had simply used common seaweed/kelp (organic plant) for the Iodine component of the herbal mixture, perhaps the FDA and AMA would have needed another pretext to target Hoxsey's herbal mixture to close down his clinics since this was a natural Iodide containing food and no inorganic or synthetic chemicals were used. Natural foods cannot be classified as drugs-medications, thus the FDA/AMA would have no valid legal recourse to prosecute any individual, including Hoxsey.

Ultimately though, the continued pressure on Hoxsey from the Government led to his relocating to Mexico, outside the judicial reach of the Food and Drug Administration (FDA), the AMA and other government organizations who wanted to persecute, discredit and ultimately, suppress the use of the Hoxsey herbal formula against cancer treatment in the United States.

The Mexico clinic has been in operation to this day, claiming over an 80% cure rate, welcoming cancer patients from around the world who have been denied alternative medicine treatments from their governments and the ever vigilant sentinels of the cancer business. Those who followed in Hoxsey's footsteps took his torch and ran with it after his passing and continue on with the protocols.

The actual formula still remains a secret, although various formulas have been extracted from court documents and reverse laboratory analysis. Hoxsey is claimed to have improved upon the formula over time. The actual ingredients and process of manufacturing are still a well held secret. Patients travel to Mexico to receive treatment and herbal tonic since the FDA persecuted them until the USA clinic fled to Tijuana, and they have been operating there ever since.

**Harry Hoxsey's Herbal Tonic Protocol:**

1. Maximum dosage of 1 teaspoon, four (4) x per day
2. Or Maximum 2 capsules, four (4) x per day
3. Clean out GI system
4. Change diet to natural foods, remove processed foods, etc.

**Linus Pauling  
(Vitamin C Protocol)**

**L**inus Pauling, PhD (1901 – 1994) was an American biochemist, chemist, scientist, writer, humanist and was twice awarded the Nobel Prize (chemistry and peace activism). He has been referenced as one of the most renown and important scientists in history and highly acclaimed for his accomplishments. Of his many research projects, investigations, experiments and writings, he discovered that there was a direct improvement of cancer patient longevity when the patient was injected with high dose mixtures of vitamin C and Lysine (intravenously). The patients would live up to four times longer or more with the vitamin C injections, than the non-injected patients on average.

The prophylactic and curative effects of vitamin C were discovered when he himself suffered from a renal disease and began self-experimenting with different doses in his body. He found merit to the vitamin C protocol and experimented with varying dosages to obtain maximum efficacy. Pauling concluded that an administration of between 3 to 12 grams as a daily supplement (more than 200 times the recommended daily allowance - RDA at the time) would meet his intended objectives (cancer prevention and curative treatment) in the human body.

An amazing discovery for its day and it should have changed the way cancer was treated from then on in the medical field. As the years would pass and an unresponsive conventional medical community looked away from his research, he realized the reality of the cancer business was disinterested in his findings and were eager to suppress or discredit any reference of a potential cure to cancer, or even potential longevity extension.

In arguments with the Mayo Clinic (that had done a comparative clinical research study of his findings), Pauling argued that their results were not reliable. Among other things, Pauling had been injecting the vitamin C intravenously, while the Mayo clinic was administering them orally to the test subjects, thereby negating the direct efficacy in the bloodstream. The short duration of only 2.5 months conducted by the Mayo clinic also contrasted with Pauling's long term intended use of vitamin C as a prophylactic method of preventing the development of cancer. Pauling's criticism of conventional medicine's cancer research is not only an indictment of the cancer institution's dereliction to cancer research and their affected patients, but implies a nefarious fraud and possible criminal conduct was/is being perpetrated by the cancer business monopoly. A well known and circulated quote that has been attributed to Pauling:

***"Everyone should know that most cancer research is largely a fraud and that the major cancer research organizations are derelict in their duties to the people who support them."***  
***- Linus Pauling, PhD***

Pauling continued with his many research projects involving biochemistry, chemistry and other areas in the subsequent years. He also branched out into denuclearization and called for peace in the world. He wrote several books relating to health, vitamin C and cancer over the years, never seeming to lose focus on important subjects of the day. Who knows where the world would be today, had the conventional medical (cancer) research embraced his work. Instead, by all appearance, he was shunned and labeled a "quack" by his medical colleagues in the cancer business.

A two time Nobel Prize winner is deemed a quack because he discovered a direct link to helping prevent and defeat cancer? The appearance of suppression of knowledge, and discrediting slander tactics against Pauling does not go unperceived. If anything, nomination for a third Nobel Prize was probably more justified by his dedicated research findings.

As a post death vindication, modern conventional medicine today has slowly (probably grudgingly due to his published books getting out to the general public, generating interest and outcry) recognized the benefits of vitamin C consumption, not only for anti-cancer therapies, but for many other ailments overall. Some clinical studies have demonstrated significant increases in longevity of senior patient's life spans, which increased with an intake of vitamin C, over those patients who did not consume any vitamin C supplements. Likewise in many other broad based studies. The increased

ability to transport oxygen has been a positive discovery and has even more potentially applicable uses. Will vitamin C be more chemically mixed and diluted now and in the future, in mass production, to decrease the appearance of efficacy against cancer? Pauling's book – ***“Cancer and Vitamin C”*** provides information supporting his research.

Another of Pauling's circulated quotes may be a tribute to the cancer business, and their handlers, who turned a blind eye to his Vitamin C research and it's effective use against cancers:

***“Do not let either the medical authorities or the politicians mislead you. Find out what the facts are, and make your own decisions about how to live a happy life and how to work for a better world.”***

***- Linus Pauling, PhD***

**Linus Pauling Vitamin C Cancer Protocol:**

1. 12 grams Vitamin C Daily
2. 1.5g to 3g Niacin Daily

Medical consultation should be made with an alternative medicine doctor who provides vitamin C supplemental injections or pills. Each patient history is unique and requires professional assistance to establish an adequate regimen to help bring homeostasis to the body's immunological defense system.

**Johanna Budwig**  
**(Flax Seed and Quark Protocol)**

**D**r. Johanna Budwig (1908-2003) was a German biochemist, pharmacologist and inventor. She discovered and claimed a direct correlation between the different types of food (fats), like saturated trans fats (bad), polyunsaturated fats (good) and proteins in the development of cancer in the human body. She developed a protocol for treating cancer that promoted the consumption of specific foods (flax seed and Quark together) to achieve therapeutic success against cancer. Additionally, flaxseed contains a natural and vital fatty acid, high in Omega 3. She passed away at 95 years of age (complications from a broken hip, not cancer), demonstrating the probable life extending benefits of her fat and food consumption diet protocol.

During her years as a scientific researcher, she invented a means of identifying the different types of essential, polyunsaturated fats that were instrumental in developing her conclusion on the development, and subsequent treatment of cancer. Her main ingredients were flax seed/flax seed oil and low fat quark (similar to cottage cheese in properties) mixed together that allowed the flax seed protein to become water soluble, and thereby allow penetration into the human cell. This food combination (essential fats) produced electrically charged ions that were able to penetrate the outer membrane cell walls of cancer more easily, resulting in their ultimate demise. These mixtures would have to be prepared fresh to maximize the benefits of the combination.

Dr. Budwig built on Dr. Otto Warburg's earlier Nobel Prize discovery that an anaerobic environment is ideal for the growth of cancer cells. That certain, unhealthy and saturated fats (e.g. margarine) suffocated

the individual cell's respiration ability, thus resulting in the anaerobic environment within the cell/organ/body. These cancer cells rely more so on the fermentation process for energy, instead of oxygen consumption (generally speaking).

Dr. Budwig observed that the electron charges produced by her food recipe (flax seed and quark) were able to break down the cellular barrier and penetrate/inject oxygen into the fatty membrane of the cancer cells (they became water soluble in the mixture due to the flaxseed protein and quark sulfur combination), thereby resulting in the inability of the cancer cells to survive in an aerobic environment and propagate effectively. Over time, the continued electrical charges on the fatty covered cells would allow for continuous oxygenation and thereby maintain a healthy environment that was not conducive to cancer growth.

Dr. Budwig noted that once flax seeds were grinded, that they should be consumed in less than 15 minutes. The interaction with air/oxygen resulted in rapid oxidation of the oil, thus rendering it less useful or even detrimental (becomes rancid over short period of time) to the body. This unique solution that she developed against cancer is simple, logical and effective. Her laboratory research corroborated her findings clinically, despite the medical and business opposition factors which tried to influence her against divulging the information publicly to the cancer patient community. In the book ***"The Budwig Protocol"*** more in depth information is provided on diet and recommend steps.

Dr. Budwig experienced persecution and attempts at suppression by the conventional medical establishment of that era. She was summoned to court on various occasions and was later absolved of any wrong doing by the judges, despite the resistance from the medical and business communities to the contrary. She eventually lost her research position and funding by the German government as a result of directly challenging the margarine industry (a major economic industry of Germany at the time, post world war II).

To her credit, it is reported that she did not accept monies to voluntarily suppress her discovery (saturated fats in margarine are directly related with the development of fatty walled body cells) that subsequently convert into an anaerobic environment, ideal for the development of cancer cells. She continued sharing her knowledge with other open-minded medical practitioners and the cancer patients

themselves, on the importance of consuming essential polyunsaturated fats that are needed, and good for the body.

It is reported that she treated hundreds, if not thousands of cancer patients around the world (many of them doctors themselves) successfully over her lifetime. She discovered and developed a protocol (the Budwig Protocol) to bring better health to her community and humanity at large. She also developed a budwig cooking menu to help cancer patients learn to cook and eat healthy foods at home for the rest of their lives.

As has been demonstrated and documented with so many pioneering medical and health guru's of their times, the pharmaceutical, medical and governmental agencies all have vested interests (political, economical, personal, totalitarian, etc.) to impede any protocol that could result in the demise of the international cancer business with their economic and political power structure.

Dr. Budwig identified a direct causative agent (saturated fats) that is instrumental in the formation of cancer within the human body. She then developed a protocol (flax seed and quark mixture – polyunsaturated fats) to directly attack and weaken the cancer by destroying its anaerobic environment. Her protocol continues to be utilized around the world today. Many doctors have opened up clinics in their countries to continue her legacy of treating and curing cancer patients who have been left to die at home, after having their life forces extracted from their bodies by the cancer industry. Dr. Budwig deserved a Nobel Prize herself for curing cancer in her patients.

**Dr. Johanna Budwig Cancer Protocol:**

1. Mix and consume Fresh Flaxseed and Quark or Cottage cheese.
2. Change dietary habits and follow the Budwig diet protocol (various steps, detailed in her book).

Recipe for a daily four (4) ounce portion of flaxseed and cottage cheese:

1. 1 cup of organic, low fat cottage cheese or quark.
2. 1-3 tablespoons of freshly ground up flaxseed (use coffee grinder or similar processor to prepare), consume within 15 minutes as it tends to oxidize quickly or use 2 – 5 tablespoons of cold pressed flaxseed oil in its place (user preference).
3. Enough clean water to soften mixture.

**John Christopher  
(Herbal Plants & Cleansing Protocol)**

**J**ohn Christopher (1909-1983) was an American Herbalist (an herbal doctor) that used natural plants and herbs to cure all types of ailments and diseases, including cancer. He was lesser known than Harry Hoxsey or other publicly recognized figures of his day that worked mostly with cancer protocols. In contrast, Christopher treated the full range of sicknesses, diseases, injuries, etc., with great success over his lifetime. He was so successful that he opened up an herbal healing school in Utah that is still functioning today. It provides some of the lessons of plant based healing that has been learned and applied for hundreds of years by different practitioners. His protocols allow anyone to learn how to treat themselves, utilizing only nature's plants and herbs.

Christopher also developed what he called the "Incurables Program" protocol. The program is claimed to deliver exactly what it states. That practically every incurable disease known to mankind could be remedied, if the protocols that he professed were followed diligently by the sick individual. He never claimed he could cure cancer, but rather the herbs would strengthen the sick person's body and they would heal themselves. Once the mind and physiological body were ready, it would reverse any medical condition in the body. Sometimes it would be only a few hours, other more complicated diseases could be weeks, months or years in the recovery process. The plants and herbs would provide (replenish) the necessary nutrients, organic minerals and vitamins that the body was lacking. This, in turn, stimulated the appropriate nerves, organs, bones, blood, lymphatic system, etc., to rebuild itself.

In repeated cases, he references how patients were able to regrow back lost teeth (and completely new sets of teeth as well) by changing their dietary habits and ingesting plants and herbs that would restore homeostasis to the body. Similarly, individuals who were diagnosed with pyorrhea (periodontitis, infection of teeth, resulting in their removal) could quickly reverse the condition within a few weeks by consuming white oak powder (contains natural organic calcium) that would cement the teeth back naturally and permanently into the bone.

If there was an accumulation of inorganic minerals/materials inside of the body, other herbs and plants would be used to leach out and extract them from the body, naturally. This would eventually result in homeostasis of the body and the individual would have less pain. Christopher had set up a process by which the sick person was required to clean out their bodies internally (3 day cleanse), implement a mucous-less diet (no meats, fish, poultry, processed foods, milk, cheese, butter, ice cream or other dairy product) and only eat natural and live foods (raw vegetables, greens, fruits, nuts, etc.) in their “whole” (complete, uncooked if possible) state. Once the body was vacated of putrefied wastes and fed healthy (unprocessed) foods, he would advise the person on which plants/herbs were relevant to attack the cancer and remove its fertile growing environment. Time and again, the testimonials from patients from all parts of the USA corroborated his unique holistic method of curing cancer and other incurable diseases, only with the use of natural herbs, plants and lifestyle habit changes.

Christopher was arrested on many occasions and was summoned to court in order to defend against the charge of practicing medicine without a license. He was able to demonstrate that he was not prescribing any medicines or conventional treatments for any disease. He only worked with natural plants and herbs and these were not classified as antibiotics or medicine. The many people that were cured of their cancer (and other ailments) provided testimony to the efficacy of cleaning out their bodies of waste products, forming new dietary habits and consuming wholesome plants and herbs to remedy their varying diseases (these were not considered as practicing medicine). He was aware of the Food & Drug Administrations (FDA) efforts to shut down any alternative medicine protocol that challenged the conventional medical protocols of the American Medical Association (AMA), the American Cancer Society (ACS) and other organizations to name but a few. He was aware of what had transpired between Harry Hoxsey and the AMA (the same Morris Fishbein).

Christopher was aware of the FDA's non-stop persecution efforts, where Hoxsey's 17 clinics were shut down in the USA. Hoxsey ultimately moved his cancer clinic to Mexico to heal his cancer patients, just as many other conventional medicine doctors had to stop treating their patients with alternative medicine or fear having their medical licenses revoked by the AMA/FDA/ACS cancer business and thrown in jail. In worst cases, those conventional medical doctors who happened to stray too far from the conventional medicine protocols (surgery, radiation, chemotherapy) to treat their cancer patients would find themselves embroiled in litigation and expect to be put in front of medical licensing boards to defend the pending revocation of their licenses. He promoted only natural plants and herbs in his remedies, thereby avoiding the standard booby traps set up by the AMA and FDA.

Christopher insisted that cancer was not unique to any particular organ or part of the body. If cancer was developed within the body, it was indicative of a toxic body and a debilitated liver. That the blood would transport cancer cells to all parts of the body, which then would manifest in any part that was weakened. The conventional medical cancer treatment wisdom would be to excise it (cut out) and declare the patient cured. Christopher found this approach to be untrue and that the cancer would simply reappear at the same location or the next weaker site in the body in a short period of time. He advocated not to treat the symptoms, but to address the root cause of the ailment in order to heal the person. This was one of the premises for the three-day cleanses, the mucous-less diet, implementing the incurables program, wet-sheet treatment and the consumption of specific herbs/plants to rebuild the body's natural immune defense system.

In his "Incurables Program", he identified the formula of natural plants/herbs used to eradicate cancer. He referenced that he had compared the ingredients list to that of Harry Hoxsey's cancer formula and found them to be practically identical. The major difference was the use of organic iodide (kelp) in his formula, instead of utilizing any inorganic ingredients (iodide chemical).

#### Blood Stream Purifying Formula Ingredients:

- |                        |                       |                 |
|------------------------|-----------------------|-----------------|
| 1. Red Clover Blossoms | 6. Buckthorn          | 11. Prickly Ash |
| 2. Poke Root           | 7. Stillingia         | 12. Marshmallow |
| 3. Licorice Root       | 8. Chaparral          | 13. Burdock     |
| 4. Cascara Sagrada     | 9. Peach Bark         |                 |
| 5. Sarsaparilla        | 10. Oregon Grape Root |                 |

Christopher frequently commented that only natural herbs and plants were ever used to treat his clients and thus could never cause any harm to their bodies. These were also considered natural food. Is red cayenne pepper a medicine or is it considered a natural plant/herb/food? If natural foods were consumed in their entirety (wholesome and not stripped of any individual components), then nature itself would ensure that no harm would come from consuming the natural plants. However, if any component were to be extracted or isolated from the complete plant/herb/fruit, then the potential existed for an imbalance and intoxication if abnormal amounts of any single component were to be ingested.

***“There are no Incurable diseases, but at times there are incurable patients”***

***- John Christopher***

Christopher’s Incurable Program is an integrated protocol that goes to the root cause of cancer formation, not symptomatic manifestations. In his book ***“Herbal Home Health Care”***, he describes the standard process used to remedy practically all the incurable diseases that afflict mankind. That these are only the manifestation of an imbalanced body, requiring adjustments to recover the immunological defense system, rebuild it and create homeostasis in it once again.

**John Christopher’s Incurables Protocol (synopsis):**

1. Week 1 – consume 8 oz.+ carrot juice each waking hour x 6 days, 1 cup of slippery elm gruel each day, consume various herbal formulas (in his book), deep breathing exercises, wear only natural fiber clothing, release static electricity by walking barefoot on grass, three (3) oil massage over six days, sunbath daily, hot and cold baths, herbal fomentation at night and zonal foot massages (reflexology).
2. Week 2 – Repeat week 1 steps, change carrot juice for freshly made apple juice from juicer. As toxins break free in the body, there may be a physical reaction (malaise, nausea, etc.) and is to be expected. It is a positive sign that toxins are being released from their deposited locations and continue pushing forward.
3. Week 3 – Repeat week 1 steps, change apple juice for freshly made dark grape juice (preferably concord grapes) from the juicer. Again, breaking down toxic deposits in the body.
4. Week 4 – Repeat week 1 steps, continue to rotate the three (3) juices every week. A single meal can be taken each day at this

point. Avoid all meats, poultry, fish, dairy products, milk, processed foods, sugar, salt, etc.

5. Body cleansing will produce expulsion of toxins and create homeostasis (alkaline) environment in the body for healing.

**Ernst T. Krebs  
(Amygdalin - Vitamin B17 Protocol)**

**D**r. Ernst T. Krebs Jr. (1911-1996) was a biochemist from the USA. He was an early researcher who discovered and defended his findings that cancer was caused as a direct result of a nutritional/vitamin deficiency.

That cancer was not in itself a byproduct of bacteria, virus or other organisms, but the lack of an essential nutrient that exposed the body to the development of cancer. The vitamin was subsequently extracted from certain fruit nuts and called vitamin B17-Amygdalin-Laetrile-Nitriloxide and was reported to have been used to treat thousands of cancer patients successfully. This natural ingredient can be found in 1,200 varieties of plant seeds (apricots, peaches, plums, peaches, cherries, grapes, apples, etc.) and is assimilated by chewing the seeds, as a natural food into the human body. He was a strong supporter of its properties and advocated for its further study and use as an anti-cancer proponent.

There is research literature supporting many of the scientific findings and tests that Krebs and others conducted, that conclusively demonstrated vitamin B17 (Amygdalin) had definitive and effective properties to eradicate cancer cells in the body. However, the resultant attacks by the US Food and Drug Administration (FDA), the American Medical Association (AMA), the American Cancer Society (ACS), National Cancer Institute (NCI), international pharmaceutical companies and other government, public and private organizations made it illegal in the USA to use as a treatment/cure for cancer patients.

Since when are natural seeds or its extracts deemed a national security threat to the health of the general population by the FDA? Since unilateral regulations were passed by the US Government to prohibit its use by the populace as a treatment for cancer! As ludicrous as it sounds, the FDA, AMA, ACS expect the general population to believe their unsupported declarations that fruit seeds are dangerous to the health of individuals. The most common and misleading pretext by the FDA is that apple seeds contain cyanide and ingestion of the seeds pose a health risk to the population (incomplete truth).

As Dr. Christopher referenced in the last chapter, if any component were to be extracted (e.g. apple seeds) or isolated from the complete plant/herb/fruit, then the potential existed for an imbalance and intoxication if abnormal amounts of any single component were to be ingested. Basically, if an individual would eat a cup of apple seeds entirely, that would be the equivalent of several bushels of apples in their complete/whole state. No human can effectively eat bushels of apples in one sitting, as they will not fit in the stomach. Unless an individual has an allergic predisposition to any particular fruit seed, there is little supporting evidence to give credibility to the government's unsound affirmation that chewing apple seeds is dangerous. The FDA should show how many people around the world have eaten apple seeds and died from cyanide poisoning yearly. How does this figure compare to the over 200,000 patients that die yearly from doctor prescribed secondary effects of medications while under their care? There is no logical argument or comparison to be made, despite the FDA's intent to mislead the populace.

As a result of being prohibited in the USA to treat any type of cancer, many cancer patients subsequently traveled to Mexico and Germany (many still do today) to get the life saving cancer treatment that the US Government has outlawed in the USA. It is illegal for any medical or layperson to treat any type of cancer patient with apricot fruit seeds (B17/amygdalin/laetrile) in the USA. Those who have done so in the past have had their medical licenses rescinded or worst, placed in prison for prescribing/selling apricot seeds to treat cancer patients.

The more investigation and research that was conducted on vitamin B17 by Krebs and other scientists, the more buried scientific information was uncovered. Much of the information collected from independent and renowned scientific laboratories was presented to the FDA, AMA, pharmaceutical companies and many other interested

parties for study and validation. These organizations subsequently turned against it, challenged B17's efficacy and advocated against its use/legalization. The cancer business and its sentinel's long reach tentacles were successful in suppressing public outcry in those forums.

These organizations apparently (unapologetically) were more interested in ensuring the discovery never achieved broad or credible dissemination and recognition across the nation. Public bulletins and partisan news articles charging the seeds were dangerous to human health were largely propagated as disinformation to the general public. The general conclusion, that attempts at suppression and retribution to those involved in spreading vitamin B17 awareness and access did not go unnoticed as well.

Dr. Banik and Edward Griffin have conducted their own, independent research that provided corroborating evidence, of major significance, that further reaffirmed Kreb's scientific findings and conclusions about vitamin B17/Laetrile. The data compiled by both men, presented irrefutable facts, statistics, scientific studies and testimonials that B17 had tangible and demonstrable efficacy against cancer. Dr. Banik travelled to the Hunza village in India and discovered a whole community who had no incidence of cancer amongst them. One of their main staples of food and oils was derived from the apricot trees (fruit seeds). The villagers highly prized the seed and claimed it to have many medicinal properties. In Dr. Banik's book **"Hunza Land"**, he makes multiple observations and conclusions as to why the locals live well into their senior years (80-90-100 years old) and do not appear to suffer body or joint pains, on top of being cancer free.

G. Edward Griffin, author of the book **"World Without Cancer"**, conducted extensive research into vitamin B17 and how the many different groups like the FDA, AMA, pharmaceuticals and others, have direct interests in discrediting and suppressing it's dissemination or use at any cost. Griffin makes a very strong case advocating for B17 and how the cancer business is placed at risk if it were to permit the broad use of B17 into the cancer medical field. Fortunately for the average individual, it is not illegal (yet) for a person to buy and consume an organic fruit, along with the internal seed freely. How will the crop pesticides and GMO seeds effect or neutralize the seeds efficacy over time? How long before legislators make it illegal to eat specific seeds, declaring them an enemy of the state, like the apricot seed that has the highest concentration of B17/Amygdalin of the 1,200 fruit seeds?

In a relevant case, Jason Vale was diagnosed with terminal cancer and received conventional radiation and chemotherapy only to have it return a year later, but only more aggressively in another part of his body. He relates how he had heard of utilizing apricots seeds/Laetrile to fight cancer and within a few months of ingesting them, he was able to reduce the size of his cancer tumor. Convinced of its efficacy, he began to share his experience with many others who suffered from cancer. He eventually opened up a business selling apricot seeds/laetrile to cancer sufferers and was arrested. The government filed charges against him and was subsequently imprisoned 5 years for claiming and selling apricot seeds/laetrile helped destroy cancer cells in his body. Where he was previously declared a terminal cancer patient, he is still alive today after consuming them personally.

There is an appearance that there exists an association between many prestigious anti-cancer foundations, global pharmaceutical companies and other cancer business enterprises, that these organizations are backed up by big government muscle to achieve their end goals against vitamin B17 and its anti-cancer properties under any circumstance. The intent seems to be nothing less than its complete extinction from the public forum. Suppressing, discrediting, undermining and denying physical access to vitamin B17, as well as, dissuading the general population of its use by disseminating erroneous and misleading information about the hazardous medicinal properties that it possesses.

The disseminated threat to the general populace that a simple organic apricot seed would be detrimental to human health is quite ironic, given the hundreds of thousands of patients that die every year in the USA, under direct care of a medical physician. The irony, I am sure, is not lost to those patients who could not access or benefit from B17/laetrile's use because of FDA regulations prohibiting its use against cancer and ultimately, succumbed to cancer's mortal grip on their bodies. What could possibly inspire a USG watchdog organization to issue a declaration of war against a fruit seed in the cancer battle?

Suppression, persecution, abuse of power are some of the adjectives that come to mind when a cancer sufferer is limited (sentenced to death) to using only conventional medicine protocols by the FDA/AMA/ACS/NCI, etc. Jason chose not to adhere to conventional cancer protocols. He has stated that during his time in prison, the cancer tumors returned and grew larger since he no longer had access to his apricot/peach seeds. Once on his deathbed from cancer at a

young age, he survived by consuming apricot seeds, went to prison for several years and is still living more than 20 years after being deemed a terminal cancer patient at the age of 18. The apricot seeds apparently worked for him, given he was a terminal cancer patient and abandoned by the conventional cancer business to die at that time.

One has to ask self, why would the FDA/Government charge and prosecute an individual for helping spread the word (and seeds) to other cancer sufferers who are desperate to be cured, where conventional cancer protocols have been ineffective and even abandoned? His story is a textbook case of suppression, persecution and retaliation against an individual who dared to challenge the deeply entrenched monopoly of the international cancer business/industry.

The ACS is said to have over \$2 billion USD in assets to fight and find a cure for cancer. Some of their financial contributions come from major pharmaceutical and inter-related cancer business enterprises. The appearance of indifference and slow walking by the ACS, to release any related cancer research studies that can potentially result in cancer cures to the public, is directly perceived.

After researching multitudes of information on B17/Laetrile, it would seem to be one of the most promising and effective (natural and organic) products that can help combat against cancer cells directly, without leaving any secondary effects like surgical mutilation, body scarring, chemotherapy and toxic radiation side effects.

#### **Amygdalin Vitamin B17/Laetrile (General) Protocol:**

1. Orally: 20-40 apricot seeds daily for advanced cancer OR
2. Orally: 500mg with meal, total 2,000mg daily OR
3. Injection: 3 to 9 grams IV daily, over 30 minutes, 6 x week.

Soak seeds for 8-12 hours, eat 1 initially, assess for any type of allergic reaction, increment and consume 1-4 seeds per hour x 10-16 hours daily (upon rising and until bed time). Apple and seeds anyone?

**Antoine Prioré**  
**(Electro-Magnetic Irradiation Protocol)**

**A**ntoine Priore (1912 – 1983) was an Italian electrical engineer. He invented an electro-magnetic machine that was able to cure various disease processes in animals and humans, including cancer patients. The technology was acclaimed to be able to penetrate, and rearrange, diseased/malfunctioning DNA and cells in the human body, resulting in total remission of terminal cancer tumors.

The utilization of his invention in the treatment of patients with different diseases (leukemia, breast cancer, others, etc.) would result in physiological homeostasis and the disappearance of all types of disease processes. Different wavelengths were utilized for different organ parts that were affected with disease. The charged particles would be accelerated in a particle accelerator, to enhance penetration into the desired organ and irradiated into the patient. The process reportedly strengthened the individual's immunological defense system, allowing it to work more efficiently as well. Priore's work was recognized as being highly effective and received funding directly from the French government to continue his research. He was able to demonstrate how the equipment functioned and converted many skeptical doctors into advocates and supporters of his invention. He was able to obtain significant funding to build a fully functional, multi-story unit that could treat a complete human body at one time.

The original working prototype would only allow for small areas or parts of the body to be treated initially. His goal was to be able to treat the complete body at the same time, instead of separate body parts. The treatment protocol was a 5 minute therapy, once a week for two weeks

and it would cure the terminal ailments/cancer. He patented his invention in Paris and in the USA. Priore was inspired to build a larger working machine so that he could cure his sister who suffered from cancer. It was reported that several unapproved modifications were made to the larger construction structure, without Priore's authorization, thus resulting in significant delays in making it fully operational. Ultimately his sister who was suffering from terminal cancer succumbed to the disease, before the full size unit was completely constructed. It is also reported that all financing and support was abruptly stopped, without any public reason being stated near its completion. It was alluded to in the research that significant pressure was put on the financiers to cease and desist funding for completion of the project or they too, would be subject to persecution. Antoine Priore's discovery/invention was commented on being the most important discovery of the century. A machine that could reverse diseases, including cancer, with only a few minutes exposure to the electro-magnetic frequencies.

The limited available literature on Antoine Priore's experiments makes it difficult to conduct an in depth analysis of his work. Regardless, enough material (writings, patent registry in France and USA, books in the French language, etc.) is available to form an opinion that he had invented a functional and effective piece of equipment that could reverse disease processes by having the patients receive electro-magnetic charges into their diseased organs, including cancer. In the book by Christopher Bird: ***"The Case of Antoine Priore and His Therapeutic Machine: A Scandal in the Politics of Science"***, he discusses in detail about Priore and the challenges he faced against the sentinels of the cancer business.

There appears to be sufficient evidence of suppression and persecution against his invention and his anti-cancer equipment. As appears to be a common theme amongst the many pioneering medical doctors, inventors, Nobel Prize winners, naturopaths, scientists, etc., there are those cancer business sentinels who resist change to the status quo. Those pioneers who have been involved with inventing and implementing unorthodox cancer treatments and cures, never seem to find a shortage of individuals (nemeses) who aspire to suppress, discredit, disparage, ridicule, persecute and prosecute ideas and methods that do not assimilate with their own belief systems or are congruent with their myopic economic aspirations.

Perhaps these fearful and reticent sentinels are merely front men, doing the bidding of the pharmaceutical and chemical corporations. Perhaps these are covert collaborators of the government and private sector cancer business related industries? It is not clear if this is in fact the case, but the circumstantial evidence alludes to this conclusion in light of Priore's documented experience with his invention and the untimely undermining of his invention against cancer and all diseases.

If Antoine Priore's invention was effective in the treatment of diseases and cancer (similar to Royal Rife, John Holt and others electromagnetic/radiowaves protocols) then he should have been nominated for the Nobel Prize as well. Instead, his invention was ultimately suppressed, disparaged, persecuted and dismantled by the ever vigilant sentinels of the international cancer business. Now gone forever, except for the registered patents he left for all to study and learn from are all that remains of his discovery and tombstone.

**Priore (Electro-Magnetic Irradiation Protocol):**

1. A single five (5) minute irradiation per week x 2 weeks.
2. Make your own unit from publicly available patent designs or see any available service provider for more information.

**Gaston Naessens**  
**(Somatoscope, Somatids & 714X Protocol)**

**G**aston Naessens (1924 – present) was a Frenchman who migrated to Canada and invented a unique and very powerful microscope (Somatoscope) that could magnify cells to a previously unheard of level (20,000 – 30,000 diameters). He was able to discover a living, micro size, sub-cellular life form that he named a “Somatid” that was inside of plants, animals and humans that seemed practically immortal and indestructible. It is believed to be the precursor of DNA/building blocks and instrumental in the formation of life itself.

Naessens was also able to identify and catalogue the sixteen (16) step life cycle of the somatid when a disease was present in the host’s body (a 3 step life cycle when no disease was present) and their individual physical forms. He was able to associate the different physical developmental stages with immunological weaknesses in the body and the development of different human diseases. The ability to detect and identify the individual stages of the somatid provided a predictable, pre-indicator of degenerative disease formation (including cancer) in the patient before it clinically manifested fully.

In conjunction with his invention of the powerful microscope (Somatoscope) and the discovery of the Somatid sub-cellular life form using the somatoscope, he also invented the 714X (*Trimethylaminohydroxybicycloheptane Chloride*) biochemical mixture. This injectable derivative of camphor (*Cinnamomum camphora*) is reported to contain various other minerals and metals as part of its composition. When 714X is injected into the patient’s dysfunctional lymphatic system, it has been found to

strengthen/improve the system and it's overall functioning, allowing it to clean and remove wastes and toxins from the stagnant lymphatic system in the body. Naessens was convinced that germs are not the cause of disease, but rather that germs are the result of an existing disease. The 714X injection validated his position.

714X is referenced as being able to liquefy materials in the lymphatic system. Subsequently, these could be processed and excreted normally with the normal bodily waste excretion system. By aiding in the ability to expel the waste, it prevents the body from becoming stagnant with waste/toxins, which can further contaminate the blood circulatory system and liver. If left untreated, this ultimately can lead to the development of a clinical and degenerative disease in the host's susceptible environment (body).

In Christopher Bird's book ***"The Persecution and Trial of Gaston Naessens"***, it discusses how Naessens was persecuted by the French government and had to escape to Canada. Ultimately, he was indicted in the Canadian court system, but cleared of any charges after the arduous legal process was completed. Nonetheless, it appears the intent of the government was to not only suppress his significant scientific findings, but to destroy his reputation and credibility in the public arena as the intended goal.

If a blood sample can be analyzed and the specific somatid life cycle existing in the body was identified, it would be able to accurately determine whether the individual had or was developing any type of disease. Once identified, countermeasure steps could be taken to preclude its full development (stopping the disease formation before it fully manifested). A major medical achievement capability if fully implemented. Nothing less than spectacular to fully arrest the growth of cancer in the body, tumors, leukemia and the full spectrum of human diseases before it had an opportunity to fully develop. A yearly pre-screening test could provide immediate differential diagnosis for medical doctors to treat their patients (like getting the answers to the exam before taking the test).

Naessens made amazing discoveries for humanity with his most powerful microscope, the somatid sub-life form discovery and the 714X injection. His accomplishments, to be able to identify early disease formation in patients, set him apart as an innovative researcher, scientist and inventor. The implications on health care alone would

globally alter the way to treat all types of patients (pre-screening as well). It was a very important discovery for humanity, worthy of a Nobel Prize itself, many times over and significantly relevant to the prevention and remedy for all cancers.

Unfortunately, the sentinels of the international cancer business were successful in undermining the possibility of any wide dissemination of the knowledge. The common theme continues to be relived whenever an innovative or alternative medicine protocol for remedying cancer surfaces in the public arena. Suppress, persecute, prosecute until complete submission is achieved.

**Naessens 714x Self-Injection Protocol:**

1. (21) day cycle, incremental doses of 0.1cc into lymph nodes.
2. Confer with a medical practitioner who provides this treatment. Once trained in proper procedure, individual can self inject the 714x regularly as a self treatment.

- The Persecution and Trial of Gaston Naessens: The True Story of the Efforts to Suppress an Alternative Treatment for Cancer, AIDS and Other Immunologically Based Diseases by Christopher Bird

**John Holt**  
**(UHF Radiowaves & X-rays Protocol)**

**D**r. John Holt (1924 – Present) is an Australian Doctor who utilized the combination of radiowaves and x-rays to attack and kill malignant cancer cells in all different types of cancer patients. His method was very effective in eradicating the growth of cancer without surgery and had a very high recovery rate of thousands of patients, as is referenced in the research literature. His methodology/invention was based on the improvement of a similar unit called the Tronado that came out of Germany. This unit was reported as using microwave radiation in the treatment of cancer.

The 434 MHz radiowave frequency unit that Holt designed, was used to stimulate the repair of damaged tissues, increase their recovery process and promote restoration of injured components. This first treatment phase was subsequently followed up with the use of x-rays into the affected cancer areas (2 step process). Treatment with his radiowave unit varied from a few days to several weeks/months, depending on the individual's cancer severity.

In his book ***“The Essentials of Cancer”*** Dr. Holt elaborates on how an anaerobic environment allows for the development of cancer cells and the associated process of fermentation (energy production for the cancer cells), similar to what Dr. Otto Warburg received his Nobel Prized for in Chapter 3. He clearly articulates the mechanisms and functions of how radiowaves and x-rays are used jointly, to safely attack and destroy all different types of cancer cells in the human body. The two (2) step process was key to successful treatment.

He affirms in his writings that by maintaining a maximum threshold (limit) of less than 600 rad dose per day, the patient suffers no permanent damage to the body (although there is increased body temperature during the exposure period). Thus, the smaller doses are given over a longer period of time, which results in the eradication of cancer cells within the body. However, that UHF radiowaves had to precede any x-ray exposure to help activate the cells (active mitosis), otherwise it was a useless treatment and the inactive cancer cells would be left unharmed by the x-rays. The radiowaves essentially sensitize the cancer cells, making them susceptible for a follow on attack and eradication by the x-rays. The injection of alcohol into the body, before the UHF radiowave exposure was commenced, also resulted in increased efficacy in the destruction of cancer cells in many cancer patients, by acting as a blocking agent.

Dr. Holt was able to analyze the different types of cancers, experiment with various treatment regimens, develop alternative protocols and implement them successfully to eradicate and reverse the cancer cell growths in many of his patients. Not all late stage cancers responded rapidly enough to assure patient survival, but most did have full recoveries or improvement in their quality of life. The quicker the cancer was treated in their early stages, the higher the probability for full recovery of the patient. Some patients are mentioned as having abandoned the radiowave protocols for more conventional treatments and were reported to have not survived for any significant period of time afterward while their peers who stayed with the Holt program did.

Although he was a very well respected surgeon and MD in Australia, he was frequently persecuted and maligned by his peers in the conventional medical community. The results he obtained during his many years of cancer treatments attest to his abilities, knowledge and the legitimacy of his protocols. The medical community (cancer field) of Australia appears to have mostly ignored his research and positive results, never acknowledging his discovery and efficacy throughout his career and practice, despite having supporting case studies to validate his successful anti-cancer treatment protocols.

Dr. Holt provides many research case studies that fully corroborate the positive results obtained utilizing UHF and x-ray protocols to eradicate cancer in a large percentage of his patients. He also concludes that cancer cells are more effective at conducting energy (electricity) than normal healthy tissues. He asserts from his experiments that intense

environmental electromagnetic radiation pollution can/does deposit more energy into the cancer cell, than normally would be occurring otherwise. He notes that if there is sufficiently intense radiowave contamination in the environment, then cancer cells grow more rapidly, as a direct result of the availability of this increased energy.

This observation, in itself, provides insight into variables of cancer development and promulgation in the population. He concluded that merely carrying a radio transmitter/receiver (e.g. cellular phone or other electronic emitting device) in the pocket is directly correlated to cancer and diabetes formation in the individual. *(Note: Perhaps there is a direct correlation between increased iron accumulation and absorption into cancer cells, and the attraction of electromagnetic radiation to them. Like a moth to the flame, resulting in increased cancer development.)*

Analyzing Holt's research material, his assessment that increased absorption of radiowaves in our environment (like those emitted from cellular phones, cell phone towers or potentially CFL – compact fluorescent lighting that emits electromagnetic radiation) can directly contribute to the growth of cancer cells is very important. It may result in considering preventive shielding of homes, work places, etc. as passive protective measures by the general population.

After researching and assimilating Dr. Holt's publicly available medical work, it is apparent that he should also have been nominated and received a Nobel Prize for his life long work in the cancer field. Not only do his theories stand on their own merit, he was able to repeatedly demonstrate how to completely eradicate even the most aggressive cancers, without re-occurrence in his patients, providing further validation and vindication to his work. As there are no two humans alike in this world, no two cancer patients are alike.

Conventional medical protocols from the cancer industry have yet still to develop or implement any cancer remedy that can consistently and effectively cure cancer patients of their diseases. Especially without physically maiming them (surgical interventions like breast, prostate, colon, brain, thyroid removals, etc.), without causing the loss of their body hair or having secondary reactions to the toxic medications and antibiotics that are administered to them. In many instances, the medical staff must use hazardous material (HazMat) protective equipment and clothing in order to just administer the medication into the cancer patient who is receiving chemotherapy. This is due to the

material safety data sheet (MSDS) mortal toxicity warnings of the medication and how to safely handle them.

Unfortunately, not all cancer patients were able to fully benefit from Holt's UHF radiowave and x-ray protocols in the eradication of the cancer. Some appear to have been too far progressed with their late stage cancer systemically, to have completely eliminated it with his treatments. However, many are reported as having an improved quality of life in their final days. Many are also reported to have lived past their original projected remaining life span estimation, given to them by conventional medicine practitioners at the hospitals.

The particular group that Dr. Holt repeatedly found to be non-beneficial to his treatment protocols, were those who had already conducted chemotherapy and radiation treatments, prior to seeing him for treatment. He concluded in his practice over many years experience that these cancer patient's cells/tissues had received irreparable radiation and chemotherapy damage and could not subsequently be healed effectively. They were past the point of recovery. Had the cancer patients not received the toxic radiation and chemotherapy protocols before being treated by him, they had a much higher probability of long term survival.

Dr. Holt was marginalized and never acknowledged as having treated cancer patients effectively by the conventional medicine establishment of Australia. For whatever reason, he was not significantly persecuted (arrested, taken to court, indicted, publicly ridiculed as merely a Warlock trying to use mystical anti-cancer potions on his patients, etc.) by the health ministry of his country for treating cancer patients with alternative medicine. It could be that since he kept such a low profile and did not publicly advertise his anti-cancer protocol that the cancer business tolerated his existence to a certain degree for those many years. Given the many other doctors, scientists and inventors who have been persecuted in the court systems relentlessly by the cancer business and their allies over the last 100 years, he may be one of the few who mostly escaped the cancer sentinels search and destroy at all costs agenda against alternative medicine protocols for cancer.

**Dr. John Holt UHF Radiowaves & X-Ray Protocol:**

1. Individual treatments varied by patient stage of cancer development. It could be a few minutes over several days or even months, since no two cancer patients were alike.

2. Dr. Holt retired and does not offer treatment. Perhaps in time, one of his medical doctor sons or another brave doctor can take the torch and continue his anti-cancer work.

**Hulda Clark**  
**(The Cure for All Cancers Protocol)**

**D**r. Hulda Clark (1928 – 2009) was an American Scientist who discovered a direct correlation between the development of cancer and (1) the infestation of body organs by various parasite species, (2) the physical exposure to pollutants and (3) the physical ingestion of contaminants in the human body. Her broad research and experimental investigations led her to discover that in the majority of her cases, once those three areas were adequately addressed, cancer eradication or significant reversal was obtained. She did not claim to cure cancer, her patients did. She is referenced as having treated over 20,000 patients in her lifetime.

In her research, she developed different protocols for eradicating the parasites with natural products. To eradicate the various worm infestations throughout the body, she used a combination of natural products that were very effective. One of the main natural products was green-black walnut hull (BWH) tincture. It is a natural poison for worms/parasites and also attacks the outer walls of tumors/cysts due to its high potassium content. Other natural products used to kill off the parasite colonies in the intestine and in the liver were wormwood and ground fresh cloves, to name but a few.

Clark was emphatic that practically all clinically degenerative diseases were the result of an improperly functioning intestine and liver. When these were constipated with putrefied excrement and toxins, the parasites/worms would flourish and release their own toxins in the body as well to further poison the body. When the liver was found to be malfunctioning, or it's liver ducts were blocked with bile stones (that

did not allow for proper excretion of bile into the intestines) this would force the blood and lymphatic systems to back up with additional wastes and toxins, affecting the body and organs (resulting in dysfunction and toxicity).

When the organs and intestines were infested with various different worms/parasites species, the body could not expel the bodily wastes and toxins properly and these same parasites frequently would migrate to other organs of the body (e.g. pancreas, liver, heart, lungs, brain, etc.). When worms/larvae (e.g. *Eurytrema Pancreaticum*) would migrate to the pancreas and maintain their life cycle inside the organ, it would alter the pancreas's ability to produce insulin, resulting in the onset of diabetes. She discovered that when the invasive parasites were killed off, the individual would quickly regain function of the organ to normal levels and no longer require any medications to keep the pancreas functioning properly. These would oftentimes be subsequently diagnosed by conventional medicine as merely spontaneous healing, not attributable to parasite eradication.

She further concluded that the creation of a toxic internal environment (putrefied and stagnant waste/toxins) in the intestines was well suited for harboring these parasites and the development of other diseases (cancer, diabetes, skin diseases, Parkinson's, tumors/cysts in the brain, etc.) to develop and fully mature. How, at times, parasites/larvae would leave their preferred organ in the host, enter the blood stream and travel to the brain (e.g. Cysticercosis) or other location to wreak havoc. There, they would settle in to live out their life cycle and reproduce. When the human body detected them, the white blood cells (WBC) would be sent out to the site to attack or encapsulate the parasites.

Ultimately, if the body's immunological defense system could not detect them (the parasites can emit chemicals to avoid detection in the human immune system) they were free to feed and prosper inside the host. If the parasites were detected, but exceeded the body's capability to eradicate it, the formation of a cyst/tumor occurred in order to quarantine the parasite from doing additional harm to the brain. These are sometimes seen in MRI's as an individual or multi scattered cyst/tumor or caverns inside the brain. These types of tumors/cysts would then be cataloged by conventional medicine as non-malignant, requiring surgical excision to remedy the patient. The use of green, black walnut tincture has been effective at destroying the parasitic tumor/cyst walls.

Clark's investigations repeatedly demonstrated that most of these ailments would auto-resolve, once the parasites (catalysts) were eradicated in the body/intestines/liver. As part of her investigation, Clark also invented a treatment protocol to eradicate parasites in the body by electrocuting them with small electrical currents throughout the body. One of her most famous inventions was a parasite "Zapper", which could be adjusted for different frequencies and attached to the body. The weak electrical charge emitted from the unit would penetrate the human body and reach the parasitic organism, causing resonance on their bodies (shaking them uncontrollably until they burst and died). This zapper is theoretically similar to that of Royal Rife's machine, but on a much smaller scale.

As part of her research, she concluded that a virus (like herpes for example) could not be eradicated in the body until all three levels of hosts/sub-hosts were also eradicated. For example, a common tapeworm in the body would be killed off (parasite host #1), releasing another sub-parasite (#2) that was parasitically living within the tapeworm. Once this second parasite host was killed off, the third parasite with a herpes virus (#3) would be exposed and killed off with additional electrical charges. Basically, the patient would be required to conduct three (3) complete cycles of electrical zapper charges to kill off the three (3) different parasite sub-hosts that were living in their sub-layers of the original host (human body). This process would be repeated as needed in cases of parasitic re-infection through contact with other individuals or via pet re-contamination. There are many testimonials supporting the efficacy of her pathogen zapper invention.

Clark also identified molds, mycotoxins, toxic dental metals, household contaminants and other environmental pollutants as major factors in the development of degenerative diseases in humans. Exposure (be it minimal over long periods of time or maximum, over short periods of time) to the chemicals, household cleaning products, air pollution, mold, food contamination and other vectors that are potential contaminating agents. The simple absorption of ethyl, wood or other chemical alcohols through the skin, into the bloodstream or specific organs (pancreas) resulted in the creation of an artificial environment that was favored by parasites/flukes. Once these locations were detected, the parasites/flukes would migrate to their preferred environment where they could continue their reproductive life cycles and feed off their host.

During the course of her lifelong work, she developed a 21 day cancer cure protocol. It is referenced in her book ***“The Cure For All Cancers”***. In it, she discusses the root causes of many different diseases (pancreatic, prostate, brain, leukemia, thyroid, liver, etc.), the many different protocols to remedy them and the many other variations of cancer and degenerative diseases in the human body. She had quite an amazing life and accomplishments for a single life span. She was not nominated by the Nobel Prize committee for her lifelong research or scientific findings on health discoveries, but should have been. The FDA, AMA, ACS nor any other governmental or private organization involved with cancer research or health related services recognized her work or nominated her for any scientific award. Her 20,000 patients are a testament to her effective protocols that she refined over the years. Her patients would probably reaffirm what Clark had indicated during her life; cancer and other severe ailments can be eradicated and remedied.

Her multi-step process was to (1) keep the human body healthy by cleansing the intestines, liver, kidneys of accumulated wastes and toxins and eradicating parasites/flukes from the body in the process, (2) remove contaminants from the teeth fillings (mercury), deodorants (aluminum), toothpastes (fluoride), soaps, shampoos, foods, etc. and (3) remove pollutants like cleaning supplies, paints, petroleum products, formaldehyde, aerosols and others from the immediate area to ensure a healthy environment to breath, eat and live at home and at work. Her protocol is too extensive in detail to include all aspects here, but can be found in her other book ***“The Cure for All Advanced Cancers”***. Her protocol included the combination of three (3) natural anti-parasitic plants that were key to recovery:

1. Green, black walnut hull tincture
2. Wormwood powdered capsules (tea appears more effective)
3. Freshly ground clove capsules

These three anti-parasitic plants killed off the adult, larvae and egg stages that were difficult to eradicate within the body. These parasites may be infesting the colon, liver, gallbladder, pancreas, brain, lymphatic system, lungs, blood or other organs in the body.

***Black Walnut Hull (BWH)*** contains high amounts of potassium that can break down the cyst/tumor wall and kill the underlying parasite, resulting in passive (non-surgical) intervention to resolve

a parasitic infection that may be mimicking a cancerous tumor/cyst growth (e.g. Taenia Solium – Pork tapeworm that causes Cysticercosis in the brain). These parasites/cysts can remain hidden and asymptomatic for many years while they mature and grow. When they become enlarged, they can push/press on the brain nerves and cause physical (seizures) and psychological (dementia) symptoms and effects to the person. The BWH tincture is effective at reaching all parts of the body and eradicating other parasitic larvae that commonly migrate out from the colon.

**Wormwood (WW)** tea is a tremendous anti-parasitic plant that immediately kills pin worms, roundworms and other parasites that the BWH does not kill as effectively. The WW is very effective at massacring these types of worms in the GI system, body and brain as well. It has been found to be more effective (potent) in dehydrated plant leaf form and made into tea, vice consuming powdered capsules. The hot tea more rapidly penetrates into the body for effective killing of the parasites, but both are effective.

**Cloves**, freshly ground and consumed in capsules are very effective at killing the Taenia Saginata (beef tapeworm), Taenia Solium (pork tapeworm) and other parasite species of eggs and larvae that are inside the GI and blood system. The cloves contain eugenol which is acclaimed as one of the strongest germicidals available in plants to kill parasitic larvae and eggs. Once grounded, they begin to lose germicidal potency over time. They should be used fresh grounded.

The three plants far exceed commercially prescribed anti-parasitic de-worming products. There are cases of individuals consuming mebendazole (vermox) and other antiparasitic medications to kill parasites and having no parasite expulsions. Subsequently, 1-2 weeks following, commencing the BWH, WW and Cloves mixture and having hundreds of parasitic worms, larvae and eggs be expelled over the course of a few days. The potent strength of the mixture is key to eradicating the parasitic colonies within the body.

Multi-step process:

1. Clean out the GI system of stagnant & putrefied waste.
2. Clean out the Liver, Gallbladder & Kidneys of wastes.
3. Change diet to whole fruits, nuts, vegetables & grains.
4. Remove processed foods, animal meats, poultry, fish, sugars, dairy products and acid forming foods from diet.

5. Add alkaline forming foods in the body to diet.
6. Consume Green-Black Walnut Hull Tincture; below table.
7. Consume Wormwood capsules; below table.
8. Consume Clove capsules; below table.

<b>Black Walnut Hull Extra Strength</b>		<b>Super W Capsules (Wormwood)</b>	<b>Clove Capsules</b>
<b>DAY</b>	DROPS, once a day, on empty stomach, 15-45 min before a meal in 4 ounces of water	<b>Once a day on empty stomach, 15-45 min before a meal</b>	<b>Capsules 3 x day on empty stomach, 15-45 min before a meal (B-L-D)</b>
1	1	1	1,1,1

14	-	7	-
15	-	7	-
16	-	7	-
17	-	7 caps all at once, repeat weekly	-
18	-	-	7 caps all at once, repeat weekly

Additionally, the slow moving or stagnant GI system can promote a toxic environment, ideal for the development and growth of multiple species of parasites. These release toxic byproducts and can contribute to the formation of cancer. By eradicating the parasites with this passive protocol, some of the variables for cancer formation are removed. The integrated approach (clean the bowels, expel parasites, nourish with whole foods and develop new dietary habits) has been successful in producing dramatic (positive) results

in cancer treatment. Her protocol is passive in nature and does not require any surgical or medical intervention to implement.

**Dr. Hulda Clark Cancer Protocol:**

1. Cleanse the body of putrefied waste in intestines, liver, kidneys, teeth, body.
2. Kill off invasive parasites/flukes (adults, larvae, eggs) in the body.
3. Remove toxic contaminants, chemicals and pollutants from home and work.
4. 21 day cancer protocol.

**Robert Beck  
(Beck Protocol)**

**R**obert Beck (1931 – 2011) was an American Electrical Engineer and scientist who invented equipment designed to kill off bacteria, virus and other pathogens in the blood, lymph and body. Working as an electrical engineer and inventor, he developed patents and innovative machines for the government and industry. In his latter life, sick and overweight, he opted to pursue the development of equipment that could help eradicate diseases in the human body and bring about a better quality of life for mankind.

To this end, he has several inventions that have been demonstrated to be effective against pathogens and improving bodily health in humans. One of his main objectives was to design them so that anyone could fabricate their own units for the cost of the materials and their own time. He did not sell any product or service and stated repeatedly that his intention was to help spread the knowledge so that everyone could practically heal their own bodies if they so desired.

One of his first inventions was the *Blood Electrification Unit* (BEU). Basically, the unit produces a small electrical micro-current from a 9 Volt DC battery. This current enters through the top layer of human skin and travels down onto the top of a vein/artery. The small electrical charge penetrates deep into the red blood cells (RBC) and helps destroy bacteria, virus, fungus and other foreign pathogens that are on and around the RBC within the surrounding blood stream. The complete blood volume is estimated to circulate continuously through the body at a rate of about once per minute, each time passing by the micro-discharge point. This assures continuous exposure of the RBC's over

the course of 1-2 hour exposure. Beck references a personal instance whereby the BEU was used for several weeks on his blood, then a blood sample was taken and inspected under a glass slide. It was catalogued and then it was stored away in a box with other different samples. A month later, the same slide was re-examined under a microscope and the original sample (red blood cells) was still alive, where other blood samples (taken about the same time from other individuals) had dried up and died many weeks earlier. He termed his blood as “immortal” since it was demonstrated to be still living and potentially, could live indefinitely. Quite a feat for a 9 volt battery and a few dollars worth of electronic parts (to be able to prolong the lifespan of RBCs without any other equipment (refrigerator, dry ice, cryogenics, etc.).

Beck also developed another unit, designed for the production and use of *Ionic Colloidal Silver* (ICS) in his treatment protocols. He was convinced of the efficacy of colloidal silver to treat many different kinds of infections and injuries (bacterial, viral, burns, injuries, etc.). He would connect a 9 volt battery to alligator clips and two 99.99% pure silver wires, then place the wires into a glass of water (preferably distilled for purity, but tap water could be used with its contaminants if no other water was available) to produce ionic colloidal silver. He could vary the parts per million (ppm) based on the duration of time the system was connected and functioning. He recommended a concentration of 5-ppm per glass, several times a day to attack existing diseases and general preventive prophylaxis. The ppm can range from 0-ppm to 20-ppm (or more) if needed, depending on the duration of exposure, strength of the battery and temperature of the water.

Beck also invented a unit called a *Magnetic Pulse Generator* (MPG) that could destroy all types of pathogens in the body, without causing damage to any human cells. To demonstrate the simplicity of his device, he used a simple camera flash and some electromagnetic copper wire coiled together to construct a fully functional unit. Once completed, an individual could self-treat his body anywhere (from head to toe) without concern for physical injuries. The isolated electromagnetic pulse would penetrate the lymphatic system, blood system and the rest of the body organs, destroying the pathogens with the MPG. The small coil of electro-magnetic copper wire was directional and had a very short penetration range 6”-12”, thus could be focused onto a specific area easily for more effect. The MPG would irradiate the pathogens to death with its electromagnetic pulse, without harming the individual. The cost of materials was less than \$100 USD.

The last invention of his Beck Protocol was another simplistic unit called the *Water Ozonator* (WO) and was used to produce oxygenated water. This protocol involved the consumption of ozonized water (O<sub>3</sub>) everyday. The extra oxygen atom added to the clean H<sub>2</sub>O would enter the body and act as an oxidizer. Basically, it would destroy pathogens that were foreign to the body, while providing additional oxygenation into the human body, resulting in a more alkaline environment. He was able to take common commercial items off the shelf and modify them to pragmatically achieve the same result as high-end units of higher significant cost.

His quartet of protocols: (blood electrification, ionic colloidal silver consumption, magnetic pulse generator and drinking ozonized water) were dubbed “The Beck protocol”. Beck would demonstrate to everyone the safety of his protocols by electrifying himself (blood), producing and consuming the ionic colloidal silver and ozonized water, and penetrating his body with his magnetic pulse generator unit in front of attendees at his lectures. He claimed he was able to drop over 130 pounds body weight, improve his health and even that his hair was rejuvenated (it turned from gray, back to black) on his head. Beck was convinced that the four protocols, working synergistically, were capable of strengthening the immunological defense system, removing sickness from the body and achieving physiological homeostasis.

He indicated that electrical current treatments had existed back in the 1800’s and that it was not new technology he was sharing. It had only been suppressed and he wanted to share his knowledge with mankind so that they could be able to heal themselves. The combined process of his protocols demonstrated a full body concept of healing. Cleaning the blood with micro-currents; killing pathogens in the lymphatic system and body (that were alive, dormant or in hiding) with the MPG; killing pathogens with colloidal silver and oxidizing pathogens with the O<sub>3</sub> throughout the body.

This whole body approach left little room for the pathogens to hide or escape his protocols, provided they were all conducted regularly. He indicated that many individuals reported to him of being cured of HIV, AIDS, Cancer and other degenerative diseases, utilizing his protocols. He never sold any products or services to anyone and made the plans/information on how to construct the units available to anyone who wanted them, for free online.

Beck's alternative medicine book "*The Beck Protocol*" has simplicity, directness, a common sense approach and a pragmatism that has been demonstrated as effective against cancer and other diseases. Like others of his character, he did not seek monetary gain or fame. He appears to have pursued the calling of empathy, to help his fellow man overcome sickness and disease. A noble and selfless drive that sets him apart from those of the international cancer business, who seek monetary gain and status, at the expense and suffering of mankind around the world.

Once conscious awareness is achieved by an individual on what can and cannot be realized with their body and health, there is no turning back. The cat is out of the bag at that point. The antiquated days of surgical butchery, mutilation, blood letting and poisoning of the body by the modern cancer industry will be history of the past. Beck strived to convey this type of message during his lectures to all his viewers. The specific details and step by step process are too numerous to include here, but can be found in his book.

**Bob Beck Protocol:**

1. Cleanse the blood for 1-2 hours daily x 30 days with the BEU.
2. Drink ICS daily, at least 5-ppm concentration.
3. Apply the MPG daily throughout the body to kill pathogens.
4. Drink Ozonized water daily.

**Dolores Cannon  
(Quantum Healing Protocol)**

**D**olores Cannon (1931 – 2014) was an American Hypnotherapist who practiced with her clients for nearly 50 years. She developed the Quantum Healing Hypnosis Technique (QHHT) of hypno-regression. She also discovered a direct correlation between degenerative disease processes and the human subconscious (higher self/spirit guide), amongst other interesting areas of humankind, psyche, reincarnation, metaphysics, etc.

In her regressions with clients into the deeply relaxed somnambulistic state of mind and body, the subconscious would come forward and make their presence known to her. She stated she would not channel any beings and indicated that her role was more of a reporter, documenting the occurrences for accuracy. In treating her thousands of clients, she conveyed that the subconscious that emerged would oftentimes be the same being/higher self, manifesting itself over and over again. These same beings would continue their ongoing conversations with her over time, despite emanating from different and unrelated hypnotherapy clients. These would occur at different locations and times of year, hundred and thousands of miles away at times. There would be no direct or indirect interaction (conscious awareness) between the conscious client and their subconscious higher self during a regression with her.

She discovered that when a client was regressed far enough in their past lives to discover the root cause of their present day ailment, and their higher self was in agreement to share this knowledge with the physically incarnate body/soul at that moment, the higher self would

provide practically instantaneous healing for any physical ailment that the client was afflicted with. However, this healing would occur only when there was no additional karmic need to finish learning a life lesson from the past and the individual was ready and willing to consciously allow the healing to take place. A common theme in her hypnotherapies and books is that we (humanity) are born into this world in order to learn life lessons during this period of physical manifestation. Each person has lessons in life that were not completed in their previous dozens, if not hundreds, of lives. Once a needed life lesson was completed, the ailment could be dispensed with in the physical body. When a life lesson was not completed, the individual would be reincarnated into a new body and begin the cycle again to learn the pending life lessons to master for continued spiritual growth. The ailment or affliction could sometimes be referred to as a catalyst or reminder to incite the intended action of the person, thereby nudging them onto the planned life lesson path to experience what was needed.

Cannon had an amazing and unorthodox approach to help the individual heal any disease manifested in the body or in the mind. Additionally, that there are several variables that can contribute to physical ailments and degenerative disease formation in people. At times, the degenerative disease process can be a subconscious manifestation to end the individual's life in this lifetime. A self-termination sequence if you will, by neglecting or allowing their body to decay with sickness (e.g. cancer or other disease) or malnutrition to the point where it can no longer sustain the life body and the soul/spiritual life force which inhabits it is forced to vacate it.

Once the point of no return is reached to safely sustain the body (breakdown of the physical body) and it dies, the soul/spirit body returns back to its higher self in the ether/universe. Once there, it can take a break to evaluate the lessons learned during the recent lifetime, prepare to return to earth once again or depart for other adventures in the universe. When all life lessons are learned (which can take hundreds and thousands of lifespans) and the soul graduates from the planet earth school of life lessons, then the higher self can return back to other galaxies and planets to begin the process all over. Once it has learned everything in the universe over eternity, it can return back to source (e.g. God, the creator of all things in the universe) to re-assimilate as one with God and share all the lessons and experiences learned over many lifespans.

Cannon speaks about thousands of her clients, some of whom have very amazing stories of ailments, recoveries and how past lives directly affected their present lives. How many of them carry over traumas of past lives into present form subconsciously, and without an understanding of why things are transpiring as they do. She affirms time and again that when the clients are regressed, and once the present day physically manifested person/body comprehends the root cause of their present illness (a past trauma, a past life lesson that wasn't completed or adequately learned, a catalyst for action, etc.), the individual experiences practically spontaneous healing and comprehension as to what significance or meaning their sickness has in this life. A eureka moment if you will. Canon indicates she has had clients who had been previously scheduled for major surgeries and that they were no longer required when the client consciously understood the reason why they had manifested their sickness under regression (including cancer), after their regression session had ended. They had been healed of their ailment, previously requiring surgical intervention.

She writes in her books and shares in her lectures, that she has been instructed by the higher self to teach her method of healing to as many people as she possibly can. That she should teach this form of healing since it will become the therapy of the future for humankind, That they want to disseminate it far and wide for everyone to benefit from its existence. A special note of interest that was emphasized in her writings is that, she was also instructed to convey to humankind that their minds are extremely powerful and the body is capable of self-healing if it has been properly instructed to do so. The human mind is capable of doing so many things that we still have no conscious awareness of, even today. Thoughts are manifested, so manifest and think positive things. Similar to manifest destiny.

The ability to heal oneself should not be considered lightly or trivial. If the present day scientific method of science were to be used for every possible analysis in the world, we would probably find that life could not even exist because of a "xyz" theory or postulation. There are so many areas of the mind-soul-consciousness-body complex that still has not been unlocked at the conscious level. The things that do occur, but cannot be adequately explained by science/scientists, are discarded as unknown, an anomaly, a statistical error, a deviance, a fluke, etc. At what point do we give those events a proper name, title and recognition of its existence or is mankind so easily tricked into falsehoods?

On occasion, the emotions and psyche of individuals have a direct correlation with the health and wellness (sickness and disease) of the person. She discovered through many of her clients, that when they suppressed anger inside of themselves, and did not release it, the development of cancer and other degenerative diseases occurred in the body. If the cancer were surgically removed, it would re-manifest elsewhere on the body as another example of the same expression of anger. She affirmed that forgiveness of the other person, and of self as well, hold the key to healing the body. Otherwise, the karmic load would continue through this life and every subsequent life, until the life lesson was learned and forgiveness removed the load of karma (debt) in the person's life. Forgiveness is the key to advancing on your journey and getting off the negative wheel of karma (repeating over and over the same life experiences, in different lives, never learning your life lessons). You can forgive and not forget, that is fine. The objective is to remove the anger, fear, hate, jealousy, envy or whatever other term is applicable. Once forgiveness is honestly given to self, the healing can begin and negative karma removed. That person and the negative emotions that were associated with their name/experience no longer exists or can do you harm. Once the life lessons were learned, graduation could occur and move into the next life lessons to master.

Cannon referenced that if an individual felt alone, or had a feeling of being home sick from some place unknown, that it could be for a longing to return back from whence they came from originally. Could this place be outside of this physical third dimension environment that we call home (planet earth), in this incarnation? What if your higher self came from elsewhere and is not native to this planet or galaxy? Would the higher self, discovering itself isolated and alone in this incarnated flesh and bone body uniform become depressed and long to return to be with those who are their family and friends afar? Those whom they love dearly and miss them, albeit with the veil of amnesia in this lifetime of their existence elsewhere? Longing for someone or something that cannot be explained, yet it exists down to the core of your cellular memory?

Cannon stated the quickest way to get out of this heavy, third dimensional life school is to graduate and move on. If a person succumbs to suicide, lives precariously to tempt an early demise, or perhaps even allows the physical vehicle (human body) to waste away with poor care until cancer or other diseases sets in to bring an abrupt end to life, they will return to the wheel of karma and start all over

again in another life. By neglecting the body (consciously or unconsciously) the person foments the development of degenerative diseases (e.g. cancer) to reach the end objective (to die and leave this life experience). In regressions, Cannon acts as an observer and facilitates the sharing of past lives with the present life incarnation, thereby helping to bring comprehension and understanding so that the person can now effectively move forward in their life journey without negative karma weighing them down emotionally or physically.

Cannon's nearly 50 years of hypnotic regression therapies have taken her through a journey that many can ponder as either true or fantasy. If even a single person has been healed through their regression (thousands already have), there must be validity to her ability to help the individuals heal themselves (she did not claim to heal anyone either, her patients did) of whatever karmic ailments and diseases they have brought forward from their past lives to present day. She brings a new perspective on human diseases and shares how individuals are all empowered to heal themselves whenever they require. Everyone just has to unlearn all the indoctrination that has been promulgated by conventional medicine and society over generations. To learn to trust our inner selves and strengthen our conscious ability to manifest healing powers on demand.

Dolores Cannon has written over 17 books on hypnotic regression. In her book ***"The Convoluted Universe Book III"***, she provides some client cases and their unique experiences relating to diseases and healing, including cancer. Her many other books provide enormous information on the metaphysical aspect of human and spiritual existence. This particular protocol requires the assistance of a trained regression professional and cannot be conducted as a self-treatment. The hypnotherapist provides the needed knowledge and experience to guide the individual to the source of the ailment, bypassing any extraneous distractions that may materialize along the way.

#### **Dolores Cannon QHHT Protocol:**

1. On average, conduct a single regression session with a trained QHHT therapist to heal ailments

- The Convoluted Universe Book III by Dolores Cannon

**Tumilio Simonchino  
(Baking Soda Protocol)**

**D**r. Tumilio Simonchino (1951 – Present) is an Italian MD and Oncologist who developed the use of common baking soda for the eradication of cancer in the human body. His research, investigation and treatment of hundreds of his terminal cancer patients with baking soda led him to conclude that cancer was caused by a fungus (*Candida Albicans*). He discovered that the use of baking soda was very effective in eradicating the cancer from their bodies. Over his many years of oncological practice, he was able to reconfirm, time and again, the efficacy of his alternative medicine protocol.

Simonchino took a bold and unorthodox approach to attacking the cancer in his medical practice. Once he realized the positive effect that his protocol was having on his cancer patients (that utilizing baking soda destroyed the tumors) he began treating more and more of his patients with it. When terminal cancer patients were sent home from the hospital to die, some would seek him out and most would survive (provided the hospital had not completely destroyed all the remaining healthy cells that may have been previously exposed to radiation or chemotherapy toxins).

Unfortunately, some patients were unable to survive their cancers because they had waited too long to contact Dr. Simonchino for treatment. Their bodies were too weak and poisoned from radiation and toxic chemotherapy medications given to them at the hospital. Their bodies had already shut down at that point and were physically unrecoverable under Simonchino's care.

As more and more patients came to him with terminal cancer (brain cancer, liver, pancreatic, breast, cervical, bladder, colon, prostate, etc.), he concluded that some of them could be treated with baking soda intravenously (IV). Others, with deeper and harder to reach manifestations of cancer inside the body would require a tube be inserted into their abdomen to ensure the baking soda would directly reach the affected body organ.

He determined that a simple IV route could not always penetrate deep enough into the organ to have a direct effect. Thus he applied variations of his baking soda treatment, based on the location of the cancer in the organ/body. These protocols would last from a few days to a few weeks time, depending on the location and severity of the patient's cancer. More details on the various procedures can be found in his book ***"Cancer is a Fungus"***.

He also developed a protocol for using 7% Iodine on the skin of his cancer patients, resulting in the skin cancer being eradicated without secondary effects. He affirms that skin cancer is caused by the Candida Albicans fungus and it can be eradicated by brushing on (with a nail polish type or fine art painters brush) coats of 7% Iodine to the affected site. Painting layer upon layer (10-20-30-40 brush coatings, etc.) and this would kill the cancer after several days of application. Subsequently, the dead cancer growth would simply fall off the skin.

When the Italian medical board discovered what Dr. Simonchino was doing to cure his cancer patients, he was persecuted and brought before a medical review board. Despite his demonstrated efficacy of curing patients of cancer and the hundreds of testimonials from his patients attesting to being still alive as a result of his treatment with baking soda, the Italian medical board rescinded his medical and oncological license to practice medicine in Italy.

Hundreds of his patients are still alive today, 10-20 years or more after being abandoned by conventional medicine and were expected to die. Dr. Simonchino was able to remedy their terminal cancers with his innovative baking soda protocol, without secondary side effects. These are some of the same patients that had been sent home to die from the hospitals when their conventional cancer treatment protocols (radiation and toxic chemotherapy medications) could not provide any additional medical or psychological hope for them.

Basically, those patients that resisted surrendering their will to live sought out Dr. Simonchino for alternative medicine treatment. He used the baking soda protocol, but some of his cancer patients were too far gone immunologically and physiologically to be healed, due to the saturation of toxic radiation and poisonous medications into their bodies. These types of hopeless cancer patients (who passed away) were used as examples by the medical review board to show how the baking soda protocol was ineffective on cancer patients and that they had died while under his care (despite having already been abandoned by the cancer business and sent home to die). That deviating from the established medical community's protocols for cancer treatment was undoubtedly the sin by which Dr. Simonchino was vilified, banished and ex-communicated from the conventional medical community.

No doubt the sentinels of the cancer business found his baking soda protocol a threat to their cancer monopoly. Just a few hundred dollars worth of baking soda, doctor office time, IV tubing, catheters, alcohol wipes and bandages, etc. vice several hundred thousands of dollars in the conventional medicine treatment (and the patient still had a life expectancy of less than 5 years). Perhaps his effective protocol was too damaging to the return on investment (ROI) for the cancer business to allow his continued service to the cancer community and was removed.

The public documentation available demonstrates a classic example of attempts to discredit any alternative medicine protocol that can eradicate cancer (e.g. slandering Dr. Simonchino). This is followed by suppression/distortion of the facts and ultimately, the persecution of the doctor/health practitioner who develops or practices any type of an alternative remedy (persecution and prosecution). Dr. Simonchino referred to this oppression as national and trans-national oppression by renowned health organizations that do not offer any real cures.

In research literature, the best results of conventional chemotherapy treatments have been anecdotal (2-3% efficacy). As has been observed on multiple occasions, the different cancer and health organizations inherently appear to skew the statistical outcomes in favor of cancer radiation and toxic chemotherapy medications. Surgical excision (butchery) is not a cure for cancer, it is merely the removal of a detected cancer manifestation, leaving the patient disfigured or mutilated at best. The underlying cause of cancer still remains inside of the patient. Until the root cause is eradicated, the cancer is destined to manifest again at an adjacent or other site in the body.

It can be surmised that the cost of a baking soda protocol to eradicate human cancer could be \$100-\$500 USD and several weeks of treatment vice hundreds of thousands of USD and no guarantee the patient would not have a remission, or even survive the chemotherapy.

Dr. Simonchino indicated that cancer killed 1 in 100 back in the 1900 and today, it is 1 in 3 people who die of cancer around the world, about 1.8 million people yearly. What changed over this period? Personal eating habits, environmental changes, work/home related contaminant exposures, human de-population agenda, psychological and emotional stresses? All are contributing factors to a healthy or unhealthy body. He downplayed the role that genetics plays in the cancer development and that it has been sold as propaganda (the lie that genetics causes cancer) to the population, as an alternative to the main reasons for cancer development. Multiple scientific studies point towards the consumption of the western diet (animal proteins, processed foods, refined sugars, dairy products, amongst others) as a primary catalyst for the development of degenerative diseases, including all types of cancer. Genetic predisposition to cancer is more of a myth, than a partial truth, promulgated to instill fear in the individual and coerce them into surrendering their ability to think for themselves.

Once an individual is indoctrinated to believe they have no options, they likely will surrender their will to seek out other options. The indoctrination process will keep them in line and they will automatically surrender to the conventional cancer treatment protocol that will maim, mutilate and ultimately be their manifest destiny downfall. The likely solution is not under a butcher's knife or deadly radiation exposure, but rather changes to nutritional and dietary habits. These would likely reverse the body's acidic level into alkaline and remove the anaerobic environment in which cancer cells thrive. The cleansing of the gastro-intestinal system would strengthen the immunological defense system, allowing the body to directly eradicate any excess cancer cell development naturally.

Dr. Simonchino is indeed a pioneer and representative of alternative medicine (pragmatic and effective). He has the battle scars of standing up against the sentinels of the cancer business and the medical review boards, who have abdicated their Hippocratic oath to do no harm. Like so many others of his caliber and vision, he knows intuitively that it is his birthright to heal others, despite what the cancer business continues to dictate as the only cancer treatment (not cure) protocols.

**Dr. Simonchino Baking Soda Protocol:**

1. One teaspoon in 4-8 ounces of clean water, several times a day x 7-8 days on first cycle. In more difficult organ locations, it may require an IV injection, depending on type and severity of cancer (refer to Fungus is a Cancer for more on procedure details).
2. (7%) Iodine applied to skin cancer (20-30-40 brushes to site), twice a day x 5 days. Then once a day x 10 days. Once the cancer spot becomes very dark, an escharotic (scab) forms. It is very important to paint along the sides and underneath the scab as it breaks away and rises from the skin itself. The process is repeated two (2) additional cycle times to penetrate deep into the skin layers. It may be necessary to inject 5% bicarbonate to ensure no remaining cancer/fungus cells remain, then recolonizing the site.
3. Additional specific details can be found in his book "*Cancer is a Fungus*".

### **Other Non-Surgical Cancer Protocols**

**T**here are many other cancer protocols that have been publicly shared over the years and have demonstrated positive results, contrary to what the cancer business spokespersons and lobbyists profess openly. Depending on whom is asked, and if they work in any of the cancer business industries, an individual may obtain varied and opposing responses. Some of these protocols have never made it out of the private homes of their inventors or even pharmaceutical research laboratories. Others have been disseminated and accepted or rejected by the public as quackery or a miracle remedy.

The only specialists who should be asked if they were effective remedies are not the pundits, trolls, partisan hacks or other interested party, but rather the cancer patients themselves who were healed. Those who chose to explore alternative medicine options, instead of those protocols from conventional medicine (surgery, radiation, and chemotherapy) and their individual experiences.

Amongst the many publicly disseminated alternative medicine protocol remedies for different types of cancer diagnosis, several have leaped out to the forefront and stood apart for varied reasons. Whether it was due to its fast acting ability, it's ability to eradicate difficult cases, its passive and non-surgical method of action or other reasons, etc. Many have supporting case studies from the actual patients, providing first hand testimonials of their individual experiences and resultant eradication of their cancer. These should not be construed as all encompassing, but rather as complementary. There are no two individuals alike, and even less when afflicted with cancer.

In many instances, the individuals themselves elected to deviate from the established dosages and even added additional ingredients, to push the limits on pre-conceived limitations of the protocols they implemented. The terminal prognosis of many cancer patients has the unique ability of removing fear from their minds and allows them to explore creative alternatives. They no longer fear the sentinels of the conventional medical community who have already abandoned them to die. These brave pioneers have been on the cutting edge of developing improved protocols, where the cancer business has remained stagnant.

Mankind owes a debt of gratitude to those individuals who selflessly chose to push the envelope with their own bodies and health, in the hope of finding alternative solutions to their cancer and those of humanity. Some remain nameless and forgotten today as they were unsuccessful, while others who were successful exclaim to the world how they were able to remedy their individual cancers. They only want to rejoice in life and share with all who will listen to how they were able to overcome their disease so that no one else will have to live their dreadful experience. They do so, even despite having to defend themselves against the cancer business and its allies, as they try to suppress their successful experience and prosecute them if they attempt to share their protocol with others as a cure for any cancer. Logic would suggest that the cancer business would publicly embrace any new protocol that could eradicate any type of cancer, not the persecution and prosecution of a cancer survivor trying to selflessly disseminate the knowledge to others. Here are some of the popular protocol remedies that have been shared in the alternative medicine community as being effective by their advocates, but they are not intended to be an exclusive or all encompassing list:

## **I. Iron and Sweet Wormwood Combination**

There is research literature that indicates iron is a primary source of building material for tumor formation (e.g. iron feeds the cancer) in the body. That cancer not only develops at sites in the body where there is an over abundance of iron, but that it also actively seeks it out. A premise that is socialized in cancer treatment is to starve out the iron source from the patient's diet, thereby slowing down and impeding tumor growth and cancer development without chemotherapy or radiation. There are claims that this is an effective strategy to pre-emptively attack cancer formation.

Another strategy (taking advantage of the iron over abundance in the body) is to utilize the old Chinese treatment protocol of combining iron and the Sweet Wormwood (*Artemisia annua*) medicinal plant, together as a tea. The iron is drawn into the cancer cells (piggybacking along the sweet wormwood with it) and once inside the cancer cell membrane, the wormwood attacks and kills the cancer cells (similar to a Trojan horse attack against cancer).

Life Sciences Journal reported on a study that indicates there is a 95%-98% efficacy of killing breast cancer cells in patients (within 16 hours) utilizing this lethal cancer mixture. This is a passive, non-invasive (no surgery) protocol to eradicate the cancer by utilizing its need to acquire tumor building material (iron) against itself by infiltrating the deadly wormwood alongside of the iron. Additional factors in evaluating the possible root causes and the potential long term efficacy are:

1. Clean out the GI system of stagnant & putrefied waste.
2. Change diet to whole fruits, nuts, vegetables & grains.
3. Remove processed foods, animal meats, poultry, fish, sugars, dairy products and acid forming foods from diet.
4. Add alkaline forming foods in the body to diet.
5. No concrete limits have been defined, daily dose suggested is between 4.5 to 9 grams of dried herb, prepared as a tea infusion with hot water (sit for 15 minutes and strain).
6. Consume only distilled/reverse osmosis clean water daily.
7. Do not use any aluminum/copper pots or utensils.

Avoid if pregnant or lactating, may interact with diabetes and anti-seizure medication (a strong hypothesis is that parasitic larvae/worms may already be inside the brain/body and taking wormwood tea may initiate a Herxheimer reaction by causing a mass kill off the worms inside the brain, leading to a potential onset of a seizure. Increased blood pressure or migraine headache may also be related to the parasitic bodies blocking free flow of blood in the brain vessels after the mass kill off). If any nausea is experienced, it is suggested to readjust (lessen quantity or concentration) as necessary according to body reaction. Reevaluate protocol progress regularly. Treatment duration is different for every individual, based on severity of cancer. Protocol is referenced as effective against breast and other cancers. This protocol is passive in nature and does not require any surgical or medical intervention to implement. It is 100% user defined and executed.

## **II. Sodium Bicarbonate and Molasses Combination**

There is literature that indicates sodium bicarbonate (common kitchen baking soda) is effective in killing cancer cells and *Candida Albicans* (CA) fungal growth. That cancer thrives in an anaerobic environment, consumes fermented and others sources of sugar that are readily ingested in the person's diet. The strategy utilized for this combination is similar to the iron and sweet wormwood protocol. The baking soda and molasses (or honey/maple syrup) are mixed together in a glass of hot water for better effect and is ingested several times a day.

The cancer cells seek out the sugar for it's own energy consumption that is drawn into the cancer cell (piggybacking along the bicarbonate). Once inside, the baking soda and molasses combination kills the cancer cells (again, similar to a Trojan horse against cancer). This alternative medicine protocol has been reported as being very successful in prostate and other cancers. This is another passive and non-invasive (non-surgical) protocol to limit cancer's ability to acquire nutrition for itself. The goal is to maintain a high alkaline pH balance (above 8.0 to consistently kill cancer cells) during its use. Additional factors in evaluating the possible root causes and the potential long term efficacy are:

1. Clean out the GI system of stagnant & putrefied waste.
2. Change diet to whole fruits, nuts, vegetables & grains.
3. Remove processed foods, animal meats, poultry, fish, sugars, dairy products and acid forming foods from diet.
4. Add alkaline forming foods in the body to diet.
5. Mix the following drink and consume 1-3 times per day:
  - a. 1 teaspoon baking soda (aluminum free).
  - b. 1 teaspoon black strap molasses, maple syrup or honey.
  - c. 1 glass distilled/reverse osmosis clean water.
  - d. Warm lightly on stove in NON-aluminum/copper pot and mix together, drink 1 - 3 or more times per day, at least 1 hour before a meal, preferably upon wakening and before going to bed at night.
  - e. Duration is 1 to 4 weeks, depending on body's response.
  - f. Monitor and strive for a continuous pH reading above 8.0 throughout protocol to eradicate cells.
  - g. Consume only distilled/reverse osmosis clean water daily.

It is referenced that an individual may experience occasional nausea from massive cancer cell die off (Herxheimer reaction), loose stools and/or headaches. If experienced, the instructions are to back off quantity and readjust (decrease amount if necessary) according to body reaction. Reevaluate protocol progress regularly and adjust as necessary for individual requirements (no defined quantity).

Treatment duration period is different for every individual, based on severity of cancer progress. There are various variations for consumption and some are combined with other ingredients. Protocol is referenced as being effective against Prostate and other cancers. This protocol is passive in nature and does not require any surgical or medical intervention to implement. It is 100% user defined and executed.

### **III. Amygdalin – Apricot/Nitriloside Seed Consumption**

There are reportedly over 1,200 fruit and plant seeds that contain various concentrations of the naturally occurring Amygdalin (Nitrilosides). The apricot seed has been identified as having the highest concentration of these seeds. There are other seeds like apple, grape, plum, peach, cherry, etc. that have lesser concentrations, but are more readily accessible to the individual in the commercial market place. It is reported that these can be eaten in conjunction, or independent of one another.

The seedless grapes do not contain Amygdalin (no seeds) and the Genetically Modified (GMO) grapes potentially do not contain the same levels of Amygdalin as organic grapes. Since apricot seeds and laetrile have been stigmatized by the FDA as being illegal if they are sold or marketed as an anti-cancer cure in any capacity, some supermarkets may have opted not to stock apricot seeds on their shelves. Health food stores may be an alternative option.

There is no definitive daily consumption dosage of apricot seeds as there are no individuals alike (height, weight, body mass index, GI system, severity of cancer, etc.). There are suggested daily quantities to be consumed, based if intended for prophylaxis, early-mid-late cancer stage development. The further the cancer progression, the higher volume and aggressiveness that is suggested for consumption in order to halt or reverse the trend for growth.

**Preventive use:** 1-12 seeds daily (adjust for body weight/mass)

**Early stage use:** 10-20 seeds daily (adjust for body weight/mass)

**Late stage use:** 20-40+ seeds daily (adjust for body weight/mass)

It is suggested that a single seed first be consumed to test for allergies, wait 1-2 hours and evaluate if there are any adverse reactions. If none, proceed slowly and increment a seed every few hours. The body may experience a sudden die off of cancer cells (Herxheimer reaction), thus a slow, methodical and deliberative process is warranted to prevent any negative reactions in the body. After 1-2 days, if all appears normal, continue incrementing to the desired daily amount. It is also suggested to break out the quantity over time (e.g. 48 seeds/16 hours in a day = 3 seeds per hour/ 60 minutes = 1 seed every 20 minutes). This is intended to have a more consistent (continuous) effect on the body and not extreme peaks and lows of amygdalin concentration.

It is also suggested to pre-soak the seeds overnight for 8-12 hours to moisten them up and help activate the seeds Amygdalin absorbability for maximum assimilation (optional). The duration of seed consumption is determined by the individual's level of expectation and tolerance to seed saturation. There are no known contraindications or adverse effects, except allergies to apricot or other Amygdalin containing seeds. This protocol is passive in nature and does not require any surgical or medical intervention to implement. It is 100% user defined and executed.

#### **IV. Beck Electrifier Cancer Protocol**

Robert Beck designed and implemented an integrated approach to helping heal mankind of diseases and cancer. His four-pronged approach overlaps and complements each other by bombarding the pathogens in the body, when used in conjunction.

1. Blood Electrifier Unit (BEU) – attached to the wrist, apply micro-current for 1-2 hours (or more if time permits) for an initial 30 days as a loading dose to achieve “immortal blood” level. Once attained, a reduced daily maintenance dose to help prevent pathogens/fungus from re-entering the blood stream and body is maintained. There were no set limits on exposure time established.

2. Ionic Colloidal Silver (ICS) - Consumption daily of multiple glasses of distilled/reverse osmosis water to clean and protect the body of pathogens. Three x 9 volt batteries are placed in series, attached to two x 99.99% pure silver (not sterling silver) wires and connected into the glass of water. After 5-20 minutes of continuous electrical current flow through the silver wire and into the distilled water, it produces a 5-10 parts per million (ppm) concentration of ICS. This is consumed as many times a day as desired. The ICS is an anti-bacterial, anti-viral and anti-fungal mixture that has broad spectrum application, including for use in eradicating all types of pathogens.
3. Magnetic Pulse Generator (MPG) – Unit is activated and discharged from top of head to bottom of feet (or specific sites as desired). The magnetic pulse extends out 6-12 inches from the hand paddle and penetrates deep into the blood, lymphatic and other tissues of the body. The pulse attacks harmful pathogens, while leaving healthy cells unscathed. Daily pulsing into the lymphatic nodes and organs assist in the destruction of invasive pathogens systemically.
4. Ozonized Water (O3) – Utilizing a homemade or commercial ozone generator, infuse O3 into a glass container filled with distilled/reverse osmosis clean water for 10-15 minutes (the higher time equates to higher O3 concentration) and drink within 10 minutes to preclude the O3 from evaporating out of the water glass quickly. Avoid plastics as the O3 may leach out plastic chemicals into the water and be consumed. A standard gauge for daily volume consumption is 1 ounce of H2O per 1 pound of body weight, per day (a general guide, not a set requirement). The O3 enters the body and oxidizes (kills) foreign bodies/pathogens that are alien to the human body. These are subsequently expelled out via the Gastro-Intestinal (GI) and Genitourinary (GI) systems.

The four (4) component Beck Protocol system is intended to assist in attaining and maintaining a healthy body. Beck insisted that his protocol had helped hundreds of individuals recover their health, including cancer, and was very effective. His protocol is passive in nature and does not require any surgical or medical intervention to implement. It is 100% user defined and executed.

The following are but only a few of the *hundreds of alternative medicine cancer remedies* that are publicly open source and are not meant to be a complete listing. They are randomly listed and any that may have been omitted, my apologies beforehand as there are too many to be listed and none were intended to be overlooked or marginalized:

- Rudolf Steiner (Iscador drug/Mistletoe)
- Dr. Aubrey Brewer (Cesium Chloride – High alkaline pH)
- Dr. James Boyce (Ozone Therapy)
- Dr. William Lane (Shark Cartilage)
- Dr. Max Gerson (Juicing Diet)
- Dr. Brian Peskin Protocol (Oils and Diet)
- Dr. William Kelley – (Metabolic Enzymes)
- Dr. Nicholas Gonzalez (Pancreatic Enzyme Therapy)
- Jim Kelmun (Maple syrup and Baking soda)
- Hyperthermia (raising body temperature above 107.6 F)
- Organic Sulphur & LIPH
- Rick Simpson (Cannabis oil for skin cancer)
- Dr. Rashir Buttar (integrative & holistic medicine)
- Vitamin C Chelation Therapy
- Greg Caton (Cansema)
- Coley's Toxin Vaccine
- Dr. Eugene Blass (Oxygen Therapy)
- Pancreatic Proteolytic Enzyme remedy
- Dr. Stanislaw Burzynski (Antineoplaston Therapy)
- Hyperbaric Oxygen Chamber Therapy
- Sunshine (Vitamin D Therapy)
- Dr. Lawrence Burton (IAT-Immuno-Augmentive-Therapy)
- Tumeric and Curcumin Therapy
- Aveloz (escharotic anticancer skin salve)
- Alkaline/Ionized Water Therapy
- Bloodroot-Black salve (escharotic anticancer skin salve)
- Beetroot (anticancer)
- Sheep Sorrel (anticancer herb)
- Carrots (anticancer)
- Chaparral (anticancer herb)
- Hydrogen Peroxide Therapy (anticancer)
- Wormwood (anticancer herb)
- Iodide (skin anticancer)

- Jim Humble: Protocol 1000 (MMS1:Chlorine Dioxide)
- Protocol 2000 (MMS1 + MMS2:Calcium Hypochlorite)
- Jim Humble: Protocol 3000 (MMS1+DMSO)

The present list of cancer remedies out in the public arena is very long. There is no known registry or archive that contains each and every alternative medicine cancer protocol out in the world. This list is only a partial listing snapshot and demonstrates that there are many alternative protocols for individuals suffering from cancer to evaluate and make their own educated decisions on how to proceed. There are also many different cancer information weblinks available online to provide background on all aspects of cancer to an interested researcher.

I did not invent any of the aforementioned cancer remedy protocols referenced and chronicled in this incomplete history book. Nor can I take credit for any of their successes or failures. The individual protocol developers conducted their own tests, experiments, analysis, reviews, case studies and ultimately they felt confident enough to share with the world their unorthodox discoveries to remedy cancer. Some were embraced, others mocked, most were suppressed, persecuted and prosecuted as a result.

An individual should not conform themselves to the first protocol that stumbles onto their doorstep or is given to them by a concerned friend or relative. Research, analyze, comprehend and make an educated decision on what may be the best protocol for your individual situation, not one driven by fear. Disregard those protocols that do not provide adequate supporting documentation on efficacy or credible patient testimonials who have survived cancer using them, etc., as an additional cross check. Access to knowledge, and options to choose from, can help each individual become more educated on their disease and the many multiple alternatives available to try as a remedy. Commence at the grassroots level and build upon that knowledge. Passive implementation is likely the preferred choice for most cancer sufferers vice radical surgical intervention and radiation.

- A Fighting Chance Silver Solution by Dr. Gordon Pedersen.

**Body Systems, Organs,  
Diseases & Remedies**

**1. Gastrointestinal System (GI):** The GI system (starting at the mouth and ending at the rectum) is the main digestive system that ingests foods, processes them by fine mastication and mixing of digestive enzymes in the oral cavity. The solids are then dissolved into liquid form in the stomach; vitamins, minerals and nutritional value from the foods are then extracted in the small intestines and subsequently, the water from the residual wastes products is also extracted in the large intestine. The residuals from the metabolic process of digestion are ultimately excreted through the colon as solidified body wastes. This system, if fed natural and organic foods designed for human consumption, should function perfectly without the development of any GI or other types of degenerative diseases. It is designed to consume wholesome (in its natural state) fruits, vegetables, grains, nuts and clean water. However, if unnatural, synthetic, contaminated, polluted or genetically modified foods that lack nutritional value are consumed, these can impede proper functioning of the digestive system or cause slow moving peristalsis in the intestines over time. The mixing of protein (acid forming) and carbohydrate-sugar (alkaline forming) food groups together at a meal should be avoided. If the two food groups are eaten simultaneously, the stage is set for a less than optimal functioning GI system. Proteins require acids in the stomach for digestion and starches/sugars require different enzymes for digestion.

When the two opposing foods are mixed/collide in the stomach simultaneously, the digestive process is negatively affected (arrested) and the foods push through into the small intestines as incompletely digested foods. In Dr. William Hay's 1929 book "***Health Via Food***",

he elaborates on the effect these foods have on the body in more detail. The accumulation of partially digested foods in the GI system can cause slow moving peristalsis-constipation, which ultimately can result in the formation of degenerative diseases within it. This can be localized in the GI system (stomach and colon cancer, irritable bowel syndrome, crohn's disease, leaky gut syndrome, gastritis and others) or become systemic and manifest itself in other manners on the body (eczema, psoriasis, distended abdomen, malodorous flatulence, constipation, abdominal colic, worms, parasites and other disease processes).

Foods like meat (beef, pork, etc.), poultry (chicken, turkey, etc.), fish (sushi or cooked), dairy products (milk, cheese, butter, ice cream, etc.) were never intended to be the staple foods of human existence. However, when world history has thrown cataclysms and natural disasters that have destroyed or limited access to foods designed for human consumption (fruits/vegetables, nuts, grains, etc.), mankind has adapted and adjusted their food intake to be able to survive those periods of famine and scarcity, sometimes even with cannibalism.

By virtue of being capable of eating another human being, it does not mean a person is designed to eat another person everyday as part of their diet. It is a naturally conscious and subconscious choice not to eat another human being. Should mankind be eating any type of animal proteins? The answer appears to be no, by every account.

Do you consider it natural to provide breast milk from gorillas, pigs, giraffes, rats or any other animal species to human babies? Why then should mankind consider cow milk to be acceptable for human babies, teenagers and adults? Is it because the cows have been domesticated? A rat can also be domesticated and its milk can be passively harvested as well. Are you willing to consume ice cream made from rat milk or give it to children? We have all been misled to consume something that is inherently unnatural for mankind. Does a carbonated soda flow from a creek, stream or well? Can it keep any plant or even grass alive if watered with it? Likely not and probably will result in its demise.

Mankind's natural decision-making process has been selectively undermined and neutered by constant media and marketing blitz's to subconsciously override man's natural instinct not to consume animal proteins, dairy products and man made synthetic edible garbage. The first time a child or adult observes the live slaughtering of any animal for food consumption, it has a naturally nauseating effect on the

person. It is instinctual, as mankind was not intended to slaughter and consume animals. Again, these instincts can be bludgeoned out of the person's psyche, permitting them the ability to suppress and disregard that unnatural experience on a daily basis. The subconscious knows what the conscious chooses not to see. Can you see yourself killing any animal with a knife, hammer or other weapon then gutting its organs out of its chest, followed by skinning and dismembering? Did you feel uneasy as you visualized it in your mind? That is your natural instinct not to kill or eat animals kicking in. You can tolerate the eating of a hamburger because you have been indoctrinated to before you could even speak. It is a learned habit, not an instinctual one. Slaughter any animal and then eat it and you will know instinctually it is unnatural.

Business interests in modern times have overtaken what should have been a natural process of food consumption. It appears to be more profitable for businesses to raise and sell animals for protein/fats to the average consumer (not sustainable), instead of fruits, vegetables, grains and nuts (which are sustainable crops around the world). The increased animal production of methane gas into the atmosphere and dwindling water/land management resources are not sustainable, but appear to be an acceptable an inconvenient truth by government and big business (refer to the documentary film ***"Cowspiracy"***).

Despite mistaken modern day beliefs that a single bowel movement (BM) per day is adequate for the expulsion of human wastes, the reality is much different. As many main meals that are consumed in a day by an individual, that is the average quantity of BM's an individual should be having daily. If two main meals are consumed daily on average, then there should be on average two reciprocal BM's per day as well. The fast pace and stressful work environments of today have indoctrinated most individuals in this arena to withhold themselves from having BMs during the workday, or they are hesitant on utilizing public toilets for sanitary concerns. Thus, when they frantically arrive home to utilize the toilet, they have already negatively trained their GI system to slow down the evacuation process and develop stagnant material waste backflow into the body. These types of negative lifestyle habits are contributing to slow degenerative disease development in the body.

The direct effects of this unnatural backlog of bodily wastes that causes constipation can be readily detected by the perception of halitosis (bad breath) in a person standing nearby, the pungent body odor (BO) that emanates from an individual's body/scalp, chronic flatulence, oily skin-

acne-eczema-psoriasis, etc. All are clear signs of putrefaction and GI dysfunction within the body. Normal attempts at masking these emergency signals of GI distress are using mouth mints, perfumes, colognes or other odor camouflaging products. These only serve to hide the real culprit (putrefied intestines) that require prompt expulsion and cleansing to ultimately rectify. The human sewer system is clogged and spraying deodorizers will not solve the malodorous problem. Only cleaning the human waste pipes will stop the backflow of toxic wastes and odors out of the body. Once the root cause is treated effectively, the body's recovery process begins to take place and the immunological defense system has an opportunity to recover and function properly once again.

As the years progress, the cumulative effects on the GI system become more and more apparent (distended abdomens, love handles, gastritis, abdominal colic, gastric reflux, etc.) as well as the manifestation of other diseases and ailments. Over just a few years, the buildup (typically referred to as colon plaque and putrefied fecal waste) has a significant effect on the body. The food consumption continues unabated, but the body reduces its efficiency in food processing, extraction of nutrients and final waste excretion. As the body's emergency response to counter the backup of bodily waste excretions in the GI system, it invites and allows the propagation of parasites (various species of intestinal worms and other organisms) to colonize, develop and reproduce within it. These worms help by feeding on decaying bacteria (like flies on dead animals, laying their maggots to clean up the decaying corpse and ultimately, clean up the local environment of wastes), excavating, aerating and moving the slow moving fecal wastes that might otherwise dehydrate and cause an impaction (very dangerous). If this was to occur, immediate surgical intervention might be needed to remove the solid waste blockage and avoid toxic secretions from further poisoning the body.

Parasites in this sense are two sides of the same coin. They can be detrimental to the human host if allowed to siphon off the nutritional value of foods ingested, invade healthy organs and cause the development of degenerative diseases (e.g. diabetes in the pancreas, liver disease/cancer when invaded with liver flukes, etc.) or they can keep the human GI system from cementing shut by helping to maintain the movement of bodily wastes (that are slow moving in a poor GI system) by burrowing through the compacted fecal material. It is not intentional on the part of the parasites to help the intestines function

more efficiently, it is just a secondary benefit to the GI system while the parasites feed off their unaware and unsuspecting host.

However, to clarify, germs, bacteria and parasites are not believed to be the cause of diseases in humanity. These materialize and congregate where there is already a weakness/disease (worms for combatting constipation) or disease formed in the body (germs to eat the decaying cells). Diseases produce the natural food supply for germs, bacteria and parasites that these pathogens subsequently scavenge as food. If there was no disease, the germs and parasites could not feed, multiply or survive. A simple analogy to visualize in your mind is this: A dead animal carcass attracts flies, which in turn then lay their larvae upon them to feed. These fly larvae then morph into maggots, and then convert into flies themselves, repeating their life cycles. A live carcass does not attract flies to lay their larvae and these cannot (normally) survive on a live host as they are actively chased, removed or killed by the host (cause and effect). The natural process of food foraging.

It is unnatural for a person to have a single bowel movement once a day. It is not healthy for a person to have a single BM every 2-3-4-5-6-7 days. It is dangerous to continuously accumulate so much fecal material in the body as it generates toxic wastes that affect all healthy organs in it and creates an environment conducive to the formation of degenerative diseases. An analogy that has previously been used in the book: ***“New Body – New Life”*** is this:

*“If I place an 8 ounce filet of raw or cooked beef, chicken breast, fish, milk or cheese on the table (say at 98.6 F degree temperature, like the human body) and leave it exposed to the environment for say 12 hours, 24 hours, 48 hours, 72 hours, etc., what would happen to the food? Yes, it would become putrid and create a foul smelling stench (gas). It would excrete dangerous chemical liquids (toxins) as it decomposed onto the table. It would provide an ideal environment to cultivate dangerous bacteria, virus and fungus and would be revolting to look at while it decayed. Now imagine the food is inside your intestine. This is exactly what was happening to me (more or less) when I did not have regular bowel movements (BM) to expel the metabolized waste products from my body.*

*Here is a hypothetical situation to contemplate: I ate breakfast, lunch and dinner yesterday (3 meals) and I only had one (1) BM during the course of the day. Today, I will eat breakfast, lunch and dinner and I*

*expect to have my regular one (1) BM today as well. Tomorrow, I will have breakfast, lunch and dinner and expect to have my regular one (1) BM also. In the course of these 3 days (72 hours), I will have consumed nine (9) main meals (not including any junk food in between meals) and only had three (3) main BM's during this same period of time. That places me in arrears for six (6) meals BM's over the course of only 3 days (assuming I would normally have 1 BM per day).*

*Basically, on this hypothetical schedule, I will always be in arrears for expelling toxic BM waste from my intestines. Multiply this hypothetical schedule for 1 month, 1 year or 1 decade. My body is backlogged with putrefied waste and it is absorbing toxic by-products from the decomposing food into my blood (circulatory system), lymphatic system, organs, skin and lungs, via my small intestines. There are people in the world who only have a single BM once a week or even longer!!! I suspect these types of individuals suffer great pain and may have angry personalities from the chronic suffering inside of them. The normal (estimated) duration for processing meals from mouth to expulsion is 18-24 hours duration, give or take a few hours. Whatever quantity of meals you consume each day, that is the average quantity of BMs you should be having each day as well, is what I learned.*

*My body has been accustomed to only 1 BM per day, for decades. As I have learned, this is not good for my body and was directly contributing to my physical ailments. I have since resolved this issue and now have 2-3 BM's per day (I only eat lunch and dinner everyday). I believe fasting has also had a positive effect on my body. I have not regularly eaten breakfast for decades. I am not usually hungry in the morning (unless I skip dinner and lunch the day before), so why should I force myself to eat something that my body is not wanting? I have learned to listen to my body more and when it wants something, I will provide it. If it does not want something extra, I will not provide it. Once I learned to listen more keenly to my body, I saw another piece of the puzzle materialize before me. They are all integral to my better health balance."*

*As you probably already know, the GI System, if properly fed, maintained and cared for, should function perfectly and without the need for any type of chemically or mechanically induced assistance to expel the naturally produced wastes. Gastric acid reflux, constipation*

and degenerative diseases could not develop in a continually flowing (excreting) GI system, etc. Unfortunately, the ingestion of unnatural foods like carbonated drinks, processed foods, fast foods high in trans fats, grains that have been genetically modified and stripped of nutritional value in the food processing factories, animal meats and dairy products all have their negative affect on the body. These foods like bread (acts like a dry plaster mix) and milk (the casein protein is a natural glue and adheres to everything) now act together like cement and line the inside of the intestines, layer upon layer. The refined/synthetic sugars are all direct participants in this gastrointestinal concrete plastering project inside of the intestines and helps to leach out organic calcium from the body (causes varicose veins, hemorrhoids and bone density loss, among others).

The western diet, high in animal protein from meats, fish, poultry and dairy (milk, cheese, ice cream, butter, etc.) have been contaminated with animal vaccinations, growth hormones, antibiotics, other ground up animals for feed, air and water environmental pollution, fertilizers and other toxic ingredients that are absorbed into the animal's natural and artificial food chain. The western diet has been repeatedly associated with the formation of degenerative diseases (e.g. cancer and others) for decades. Any country that has adopted the high animal protein diet has significant increases in population disease formation and mortality rates. ***“The China Study”*** is a long-term study of population health statistics that spans several decades. In it, the researchers were able to clearly make the direct correlation between high animal protein consumption and degenerative disease formation in the population time and again.

When cross checked with other countries health statistics, it becomes notably apparent the direct correlation of the western style diet (high economic affluence has increased consumption of animal proteins / trans fats and a higher parallel incidence of cancer and other degenerative diseases). Countries with lower economic levels have less animal protein and higher plant protein and carbohydrates diet, with less development of cancer or other degenerative diseases. Again, the statistics from the multiple years' research studies reaffirm these same findings in the China Study and other research material.

A healthy diet (less animal protein consumption) is directly related to a decrease in human diseases. Until mankind comprehends and accepts that his body is intended to consume fruits, vegetables, nuts, grains and

clean, uncontaminated water as the primary staple of foods, he shall continue to experience the maladies of the western diet. Generation after generation will be indoctrinated into the food industry diets (sugared cereals, milk, carbonated sodas, cheese, meats, fish, donuts, pizza, refined breads and the list goes on until the cycle is broken (lifestyle habits) by conscious awareness and dietary consumption education. This education cannot be found in any textbook or seen on the food pyramid chart hoax, presently in public schools and nutritionists' educational curriculum. The pyramid chart is more aptly identified as an advertising and marketing chart to indoctrinate children at an early age and reinforce the message to parents (buy these animal products daily for the health of your family as a good parent).

The common and unsupported argument that mankind is carnivorous and would cease to exist without consuming animal proteins is an advertising and propaganda tactic by the food industry in movies, TV, radio, magazines, etc. and ludicrous in its assertion. As you already know for an example, how can an elephant that has hundreds and thousands of pounds of flesh survive by only consuming vegetation? How is it that a Rhino can survive on only vegetation? Since apes and chimpanzees have been catalogued as some of mankind's nearest relatives, how is it that they can survive on fruits, berries, nuts, leaves, etc. (hundreds of pounds of sheer muscle on the gorillas) without eating any animal meats or milk from a cow (excluding the cannibal apes who eat their own)? The invalid argument that man cannot survive without animal proteins has been proven false millions of times over. There are hundreds of millions of vegetarians and vegans in the world who do not eat any meats or products derived from animals, who have lived a normal life for decades, never eating animal proteins.

The more you read and research, you will learn that being a carnivore is a learned trait, not a biological drive or instinct. Does a newborn human baby crave for a steak like a shark or other carnivore? A baby will continue to eat fruits, vegetables, grains and nuts (when in a blended consistency - until their teeth emerge) as it grows up, until the parents begin indoctrinating it to eat the unhealthy meats, dairy products and processed foods when their teeth finally come out. Consumption of animal meats is a learned trait, fully implemented with indoctrination programs in schools, society and the nuclear family. Once the alien parasites (worms, fungus, pathogens, bacteria, virus, etc.) that inhabit the human body (that have hijacked the biological control center for food consumption in the brain) are eradicated, and

stop excreting chemicals/hormones that control human cravings for food, the body will regain control of its natural food consumption process. The realization and ability to stop consuming animal proteins will emerge and come naturally (without withdrawals or cravings) when the parasites are all eradicated and they stop releasing those controlling chemicals into the brain and body.

Actual experiments have demonstrated that once these parasites and fungus were eradicated from the body, the individual no longer craved any animal meat (after being a life long carnivore) and became a full vegetarian/vegan (vegetables, fruits, nuts and grains only) within a few short weeks. Body fat dropped immediately, muscle tone increased, strength and endurance skyrocketed and other positive changes in the body were realized. The physical cravings for all types of sweets and junk food vanished completely once the parasites and the candida albicans fungus were eradicated from the intestines, liver and body.

The combined research information of over 100 years all validate what is an inconvenient conclusion to the food industries and pharmaceutical/chemical companies; consumption of natural foods, without animal proteins, processed foods, sugars or trans fats, results in a healthy body and GI system. If the GI system is fully functional (2-3 BM's per day), there is a low probability of developing any GI or systemic degenerative diseases (e.g. cancer and others). This in turn, reduces the need for consumption of any unnecessary antibiotics, medications, surgeries and other procedures that likely do more harm to the individual than the actual disease itself (secondary effects).

To ensure the GI system is fully functional, it should be maintained with: (1) regular cleansing of stagnant and putrefied colon plaque waste (intestinal-colon cleanse), (2) regular neutralization of existing acidity in the body and reduction (consumption) of acid forming foods in the diet and (3) fed natural foods that do not contain animal proteins or trans fats (rejection of the western diet) and are more alkaline producing in the body. These three steps can help bring order back into the GI system that can subsequently help rebuild the body's immunological defense system, thus helping to self-heal the body of any disease and ailments.

This process focuses on the cause of the illness (toxins and waste in the GI system and poisoning the body), not the symptoms that are treated with ineffective medications, antibiotics and surgery. By maintaining

an alkaline environment, the GI system becomes more aerobic. Cancer and fungus have a higher propensity to develop and grow in an anaerobic (no oxygen) environment and feed off of fermented foods and sugars. They cannot, however, survive for long in an oxygenated environment that has good peristalsis and which does not afford the opportunity for diseases to develop. The many individual healthy eating and body cleansing lifestyle habits combined, when in synchronicity, create the ideal environment for body homeostasis and a strengthening of the immunological defense system so that it can shield itself from any degenerative disease formation.

**2. Liver:** The liver has multiple functions in the human body and all are very important to maintain homeostasis and good health. When the liver is weakened, diseased, enlarged, congested, inflamed or painful, it is indicative of a potential, major health issue. When a diseased condition exists in the liver, it confirms there is/will be other degenerative diseases manifesting elsewhere in the body as a direct cause and effect relationship. There is a direct correlation with the dysfunctional liver and sickness within the body. The liver performs various tasks like removing wastes and toxins from the blood, producing and excreting bile for food digestion and various other bodily tasks that help keep the body functioning properly.

Did you know that when any of the hundreds of liver bile ducts are blocked off with bile stones, parasites, worms or other wastes, it can cause a backup in the blood circulatory and lymphatic systems (wastes and toxins)? These wastes, when they backflow, subsequently can cause yet more damage to the body with its toxins. When there is excessive blockage, multiple manifestations can result like blood poisoning, cysts, skin diseases like psoriasis, eczema, boils, furuncles, carbuncles, acne, pus and various other ailments. Since there is no way for the bodily wastes and toxins to be efficiently removed via the liver due to the blockages, the body pushes them out through the skin as a makeshift emergency exit to expel the toxic wastes. If there are bile stones present in the liver, the duct blockages can also create pockets or chambers in which parasites/worms can safely hide behind as they live out their reproductive lifecycle (e.g. human liver flukes, hook worms, fasciolopsis buski and other parasite species).

When the liver is ceasing to function properly and bile backflows into the blood stream, the development of jaundice in the eyes (yellowish coloring of the sclera) and skin can manifest and becomes visibly

apparent. As more damage is incurred, the development of cirrhosis of the liver, or even a fatty liver can manifest itself unexpectedly. The fatty liver becomes enlarged with fat as it has bile duct blockages and therefore, an inability to remove/excrete the fatty wastes from the blood/liver system. The wastes are continually recycled over and over through the circulatory system, constantly becoming more viscous with fat and other concentrated toxic wastes. The liver then begins to accumulate the fat inside and outside of the liver. Until the liver can recover its functionality, it can continue to grow in physical size and decrease in circulatory and cleansing effectiveness. The dysfunctional liver can then affect the other organs in different capacities, but ultimately can result in the formation and manifestation of a degenerative disease somewhere within the body.

The only way for the liver to potentially recover its full performance capability is to remove/expel any wastes, or accumulated bile stones, that may be blocking its ducts. Most individuals (and conventional doctors) are unfamiliar with how to clean out the liver of blocked bile stones and parasites (not instructed on how to do alternative medicine protocol in conventional medical academia). There is no single magic pill from the pharmaceutical industry that can cleanse a liver, it requires old school alternative medicine from hundreds of years past.

The liver cleansing process requires comprehension of the alternative medicine process and a firm commitment to cleaning and recovering the liver's health. If the other factors (consumption of processed foods, acidity, alkalinity, hydration, medications, lymphatic system cleansing, circulatory system cleansing, exercise and others) are not also addressed and integrated into the whole body approach to recovering liver health, then the individual is destined to repeat the process that led them to their original state of sickness. The liver is an amazing organ and has the capability to heal and regenerate itself with new cells if damaged or partially removed. It only needs a healthy environment, good nutrition and for the spiritual occupant of the body to stay out of its way to heal and regenerate itself completely.

**3. Gallbladder:** The Gallbladder is typically affected when there is a parasitic obstruction or there is an accumulation of bile stones (calcified) within it. As this occurs, it becomes blocked off and inflammation takes place. If the lumen (opening) is not recovered quickly, there is a high probability that conventional medicine will intervene and excise it (Cholecystectomy) from the body. This leaves

the liver without any reservoir to store bile and use as needed during the day. When there is no bile reservoir (gallbladder), it flows continuously out of the liver. It has been demonstrated that the oral consumption of Epsom salts with water results in the dilation of bile ducts in the liver area and also has an effect on the gallbladder as well. This is further corroborated with the calcified bile stones (with the physical outline of the gallbladder) that emerge during a standard liver cleanse (alternative medicine protocol, not conventional medicine).

A more effective alternative for medical consideration should be the use of Epsom salt in the removal of calcified bile stones from any inflamed or blocked gallbladder, in lieu of having the gallbladder excised permanently. Passive and preventive cleansing of any liver/gallbladder calcified stone(s) would be more beneficial than surgical intervention. There types of alternative medicine protocols used to remove calcified bile stones are passive and do not require surgical intervention.

Cleansing out the GI system of putrefied wastes, changing poor food consumption habits (processed, trans fats, synthetic, GMO, animal proteins, dairy products, sugars, etc.), changing from the acidic western diet to a more alkaline one, neutralizing existing acidity levels in the body with alkaline ingredients (like baking soda), implementing moderate exercise regimens, positive lifestyle habit changes, etc. may help prevent the development of cancer in the Liver/Gallbladder. The integrated approach is instrumental in not only maintaining a healthy and functional gallbladder, but all the other body organs as well. When one organ is dysfunctional, all others are directly and indirectly impacted as well.

**4. Kidneys:** The kidneys filter and remove waste from the blood stream. These can be toxins, inorganic materials, bacteria and other byproducts excreted from the cells and body. They are instrumental in keeping the body free of wastes in the blood. If poor diet, lack of hydration, toxic medications, chemicals and pollutants saturate and overwhelm the person's body, these can manifest as acute or chronic pain and inflammation anywhere.

The development of kidney stones occurs when there is excessive accumulation of salts, minerals and/or a lack of adequate hydration. They break free from the kidney, migrate into the ureter and eventually are excreted out by the urethra. All along the excretion pathway, the sharp cutting edges of the stone (like razor blades) slash and gouge the

fragile and delicate cellular wall lining of the kidney and ureter, resulting in extreme pain to the individual. The level of pain described by individuals who have suffered this experience state it is the worst pain they have experienced in their lives, comparable only to childbirth.

If medical attention is not given promptly (in severe cases), large kidney stones can obstruct urine flow (obstructive uropathy) and cause urinary retention (inability to urinate/void urine) that can lead to backflow into the kidney and cause extremely severe pain. Complicated cases of obstructed urinary tracts may require emergency medical intervention. If the flow of urine is not promptly rectified, this can result in kidney failure. The most practical and passive method of avoiding the development of kidney stones is to always stay hydrated and avoid excess absorption of salts and minerals into the body. Performing regular regimens of natural kidney cleansing helps to reduce the potential accumulation and formation of kidney stones.

**5. Cancer of the Brain:** When an x-ray or magnetic resonance image (MRI) is taken of a brain and a cyst/tumor is detected, it is not always easily defined as benign or malignant at that moment. Additional tests are sometimes taken to help narrow down the differential diagnosis and put a name to the medical finding. Common conventional medical (cancer) treatment is to perform a biopsy, conduct exploratory surgery, excise the growth once inside of the brain, commence radiation/chemotherapy, continue to take medication and take a wait and see (frequent monitoring) approach for the foreseeable future.

It has been demonstrated that a parasitic larvae (e.g. *Taenia Solium* - pork tapeworm – from undercooked pork products) can migrate from an infected persons gastrointestinal system (via blood or other avenue) into a person's brain. These larvae can then stay there and live out their life cycle for many years undetected. If not eradicated, they can produce cysts, grow larger and cause brain and nervous tissue damage in the body, paralysis and even death. The most common characteristic found on post mortem brain autopsies of these types of patients are multiple cysts/holes in the person's brain (Cysticercosis).

As you read and assimilate more research information, you will discover it is an undeclared pandemic of human parasite infestation around the world, with conservative estimates of over 25 million infected individuals in Central and South America alone (just with the *Taenia Saginata* (beef)/*Solium* (pork) tapeworm infestations).

The USA medical community has taken a passive approach to acknowledging the mass incidences of parasite infestation into the brain-intestines and declaring it a national crisis (similarly with the chronic propagation of other diseases like: Lyme's disease, Mad Cow disease, Liver Flukes, Intestinal Flukes, Morgellons disease and other parasitic infestations, etc.) and tend to mostly disregard the differential diagnosis of a simple larvae infestation. By default, it then is diagnosed in the line of cancer related disease and the cancer business apparatus goes into full motion to treat the (malignant/non-malignant) cancer cyst/tumor detected in the brain. Where a few cents worth of a natural anti-parasitic plant (***black walnut hull tincture or wormwood tea*** for example) has been demonstrated to resolve the larvae infestation, it is discarded and deemed ineffective. Instead, surgical intervention, x-rays, MRI's, radiation and chemotherapy are the default treatment of choice by conventional medicine and oncology (cancer business) to address the cyst/tumor.

A more effective treatment protocol would likely be to treat passively (non-surgical) for Taenia larvae with natural anti-parasitic plants (wormwood tea, ground cloves and black walnut hull tincture). The black walnut tincture is high in potassium and breaks down the exterior walls of cysts/tumors. Once it has completely perforated the wall, it attacks and eradicates the larvae itself. Subsequently, the remnants of the cyst/tumor and larvae are absorbed by the body (macrophages & phagocytosis) and disposed of as waste in the lymphatic system. This process eradicates the symptom (manifestation) of the detected larvae-cyst/tumor in the brain, but it does not address the root cause of its development (the other larvae and parasites in the stagnant and putrefied GI System that continue to exist in the body).

If larvae/parasites are deemed not to be the cause of the cyst/tumor in the brain, then the focus for the usual suspects in alternative medicine shifts to other areas (e.g. holistically by increasing the alkalinity and decreasing the acidity in the human body). This can normally be achieved with dietary changes, cleaning out the GI system of wastes and increasing the alkalinity levels of the body (above 8.0 pH for several weeks) by consuming alkaline producing foods and baking soda to neutralize the existing acidity within the body. Both of these options (anti-parasitic plants and increase in alkalinity) are passive in nature, do not require surgical intervention and can do no harm if not abused and are taken in moderation.

**6. Cancer of the Colon:** The 20-40 feet of intestines (duodenum, jejunum, small intestine, large intestine, cecum, ascending, transverse, descending colon, etc.) the average adult person has potential for the development of degenerative diseases (e.g. colon cancer). The ingestion of toxic chemicals and pollutants, slow moving fecal material that produce biological toxins, parasitic worms and fungal infections (e.g. Candida Albicans) can result in chronic pathogenic infestations, bowel obstructions and diseases. This can ultimately lead to perforated bowels (e.g. leaky gut syndrome, irritable bowel syndrome, crohns disease, etc.) and other physiological manifestations that can contribute to sickness and disease formation.

As you probably already know, the typical conventional medical treatment protocol for colon cancer is to excise the diseased segments of the intestine, reconnect it and expose to radiation in order to kill off any remaining cancer cells in the area. Other options include mass removal of the intestines and the patient is left with a colostomy bag attached to the side of the body or any other variations of the same. None of those treatments effectively eradicates the cancer, rather only maims and mutilates the patient. Prevention is more effective than surgical intervention as it prevents its development from the onset.

The root cause of the cancer is mostly overlooked and never fully treated. Only the symptoms are addressed (cut out of the body) and the patient succumbs to the limited conventional medicine protocols. Simply modifying the daily food consumption habits, cleansing of the GI system, eradicating invading parasites and neutralizing existing acidity in the body have shown positive results in alternative medicine. Many have claimed to be fully healed, never developing any secondary instances of cancer during the rest of the patient's life. The first step is to remove the putrefied wastes that are likely leaching out toxins into the colon, resulting in disease manifestation. Remove the catalyst and the body likely can heal itself, despite any misguided intervention by the body's spiritual occupant who has never been properly trained on the human body instruction, maintenance and repair manual.

**7. Cancer of the Breast:** The statement that a lump or mass has been detected in the breast and that it can be cancer is terrorizing to most women, and rightly so. It evokes uncertainty and dread, leaving the woman in a state of fear. The explosion of cancers in the breast has been attributed to many different causes over the decades, each with their own statistical evidence to demonstrate their suspected root

cause, but never directly identifying the causative catalyst. Conventional cancer Research today suggests that women over 50 years of age are more susceptible to breast cancer development than younger females. This category of women is urged to often have annual/biannual mammograms to help provide early detection.

Wouldn't most women, however, like to know that there is other opposing scientific research that challenges this misguided and often promoted disinformation? Their position is that the constant radiation emitted by having yearly mammograms is one of the primary causes of breast cancer development in normally healthy women. Not only in older women (who likely have had more mammograms over the years than younger women), but younger women as well. ***"The Mammogram Myth"*** provides insight into this cancer business economic phenomenon.

This preventive breast cancer procedure that is constantly promoted appears more to exacerbate the development of cancer in women, rather than detect it. Many researchers advocate for women to avoid at all costs, this unnecessary procedure while conventional medicine advocates for women to be screened regularly to provide early detection of cancer development. Even health insurers advocate for regular mammograms screening (cancer business) as it is usually included in the health coverage and deductibles, thus the economic incentive to get them done more often. Which came first, the cancer or the x-ray machine radiation that likely caused it in an otherwise healthy person? There are other risk factors that have been identified by the medical community and associated with breast cancer, like hormone therapy (estrogen), smoking, obese-overweight, oral contraceptives, previous radiation treatment, consumption of other medications, etc. Some other unorthodox conclusions are that possibly tight fitting bras/clothing can restrict blood flow to the breasts and disrupt healthy circulation of the blood and lymphatic systems, the ingestion of toxic medications, the exposure to environmental pollutants, absorption of chemicals in makeup, hair dyes and their cleaning products, absorption of other creams, aluminum laden deodorants and lotions through the body's skin, etc. as all viable catalysts in the development of cancer.

The lymphatic system of the body also extends into the breasts (sub-areolar lymphatic plexus, internal mammary lymph nodes, etc.) and transports wastes from the body's cells, out of the body. If the human lymphatic system is burdened with excess wastes and toxins, the toxic

wastes can backflow into the blood stream and organs. If the lymphatic vessels are congested with solidified or viscous wastes, the excretion and disposal process is much more difficult from the breast tissues.

Given the many lymphatic vessels that are present in the breast, and the restrictive-occlusive bras/clothing that constrain lymph and blood flow in them, there may be a direct correlation between these variables and cyst/tumor formations. In the case of a bruised muscle or tissue, blood may leak into the injured location and result in a stagnant pool of fluids. When there is pooled blood anywhere in the tissue, it has been discovered to be a suitable and desired location for the manifestation and propagation of new cancer cell growth. It is not clearly known why this manifests, but provides a possible risk factor for future inclusion in physical breast examinations (any injury sites).

What is known about cancer of the breast is that it is not normally associated with a single occurrence. You likely have heard over the many years that the probability of developing cancer in the second breast is high when there has already been a previous incidence of manifestation in the first breast (whether a mastectomy was performed or not). The root cause should be addressed (diet, acidity, exposure to contaminants, pollutants, other) in order to eradicate and remedy the development of cancer in the breast, not the maiming of the patient.

Where significant health, body and lifestyle changes have been made by an individual (food, exercise, organ cleansing, etc.), positive results have been noted in the patients overall health and recovery process. Passive and non-invasive options should be considered prior to any invasive-surgical intervention.

**8. Cancer of the Prostate:** The phrase cancer can place any individual in a state of shock, without question. Just as women react to a diagnosis of Cancer in the Breast, men equally shiver in fear at the words “Prostate Cancer” that can be interpreted as the proverbial kiss of death for masculinity and virility in some men, including life itself.

Prostate cancer development has been associated with several risk factors: over 50 years of age, African-Caribbean American, obese-overweight, geographic location (higher prevalence in western societies of North America and Europe vice lower prevalence in Africa and Asia), absorption of carcinogens, pollutants, etc. Dietary and lifestyle habits are downplayed as major risk factors by conventional medicine.

However, alternative medicine concludes that most degenerative diseases, including cancer, are directly related to poor dietary habits and nutritional intake. The ingestion of the Western diet (high animal protein diet) is a major contributor to the formation of diseases. ***“The China Study”*** again provides damning statistical and research data that directly points to a direct correlation between the two areas (diseases and animal protein consumption).

Conventional medicine advocates in many advanced cases for surgical intervention like removal of the prostate, radiation and toxic chemotherapy medication treatment for an indeterminate period of time. The typical end result expected is a brief remission of the cancer, severe secondary effects from the radiation and chemotherapy treatment, impotence due to severing of many delicate nerve tissues and other associated maladies. Alternative medicine pursues other areas that are passive in nature (no surgical intervention) and are intended to provide lifelong changes for overall health (cleaning out the body of wastes, increased alkalinity, consumption of nutritious and wholesome foods, exclusion of western diet junk foods and other optional factors).

The cancer industry indicates that they still do not know the root cause of cancer, yet provide only limited options for treatment that leave the patient maimed or mutilated at best. Research has shown that a cancer patient that had never performed any type of radiation/chemotherapy, would likely have survived four times longer or even self healed, than an individual with a similar cancer who did perform conventional chemotherapy for the same exact diagnosis. This statistical literature directly implies the cancer patient had a much better chance of surviving, and quality of life, if they had never gone for cancer treatment from the onset. The information and findings discussed by the researchers and the implications on the patient directly are significant.

There appears to be little public bulletin information available on websites, literature, health magazines, clinics, cancer hospitals or any part of the medical community, communicating that a passive approach may prove more beneficial in the management of cancer vice radical surgical procedures (extraction/mutilation) and chemotherapy intervention. Passive treatment protocols are suggested to be considered first and foremost by alternative medicine, before implementing any radical or surgical intervention.

**9. Cancer of the Skin:** To define the human skin, its texture and its various shades of color is like being asked to identify each and every variation of color and warmth on a rainbow. Each is unique unto itself and has its own origins. Some skins are more delicate while others are more pronounced. The lighter shades are more susceptible to overexposure of the sun and require supplemental protection (clothing, not sun block) from its powerful rays. Inversely, darker skins can absorb much more significant quantities of the sun's rays, without suffering any damage to its cellular structure. Cancer of the skin is fiendishly similar in many regards to the rainbow. Once understood, half the battle is over.

The human skin is a very strong, functional, pliable, repairable and protective organ. It absorbs air and nutrients while excreting wastes and cools the body when overheating. It is designed for maximum wear and tear on the planet. It can withstand the sand, snow, rain, ocean water, ice, humidity and the sun. In one capacity or another, it adapts to the environment in order to provide maximum efficiency and protection to its owner. If, however, the body's immunological defense system is weakened or dysfunctional, it allows pathogens to penetrate into the body that otherwise would have been consumed by the cellular macrophages/White Blood Cells (WBC) that live to kill foreign bodies.

As you are previously aware from reading in this book, when the human immune/blood/lymphatic system is dysfunctional, the body may not be able to effectively consume, quarantine or evict foreign pathogens or wastes from the body efficiently. When the body is functioning inappropriately, one of the quickest ways that foreign pathogens, toxins or pollutants can be expelled from the body is through the lymphatic/blood system, via the body's skin (e.g. through a boil, cyst, carbuncle, furuncle, pus, etc.). This is more prevalent in the case of a weakened body that may have dysfunction in the liver, lymphatic or blood systems and cannot filter out and expel the toxic wastes without potentially harming the body excessively. The emergency exit is presented as a boil, cyst, pus, etc. so that the toxins are expelled out in bulk more efficiently and the liver or other organs are spared the toxic overload that may cause excessive harm to the body. The skin becomes the emergency exit hatch per se.

In the case of cancer of the skin, the malignant cells have broken through the natural defenses of the skin and body, have ripened inside of the weakened body and are branching out to escape the quarantine

wherever they can inside and outside of the body. The underlying catalysts are the cancer cells. Beneath those, there is *Candida Albicans* (CA) or some other catalyst that has overrun the body's natural defenses (immunological defense system). When there is strong immunity, there is little probability of pathogen growth or expansion.

The underlying cause of the cancer of the skin is not the sun, nor the CA, but rather the immunological deficiency that allows the pathogens to exist, reproduce and thrive. As in a previous example of a fly laying its larvae on a dead carcass (which it is attracted to by nature as part of its life cycle), a healthy carcass does not attract flies or larvae (strong immunological defense system that keeps the body from developing environments conducive to pathogen growth and reproduction). Disease, bacteria and pathogens do not unilaterally manifest on a healthy body's skin. There has to be a root cause (not the sun). What attracted the pathogen to the body, like a vulture circling overhead?

Alternative medicine indicators consistently point toward a dysfunctional Gastro-Intestinal (GI) system as the primary catalyst for a weakened immunological system (discarding radiation, carcinogenic chemicals and toxic medications). This attracts the pathogenic bacteriological, viral and fungal vultures to feast.

The sun, if abused in excess, can cause 1<sup>st</sup>, 2<sup>nd</sup> or 3<sup>rd</sup> degree burns if the individual is not cognizant of its power. In moderation, it is healthy for the human body, despite the advertising and marketing campaigns to buy white inorganic and chemically laden liquid chalk to place on the body and protect against the sun's natural energy providing rays.

The sun plays its part in the protection and nutrition of the skin. The sun provides the needed energy to begin the process of Vitamin D production. It only takes 15-20 minutes every few days in the early morning sun to synthesize vitamin D. Any surplus production is normally stored away in the liver and fatty cells of the body for later consumption. Given that the sun is a natural source of energy for the body, it is completely unnatural to apply a layer of motor engine oil, transmission oil, sunblock oil or any other type of synthetic coating that clogs the skin's ability to breathe or absorb nutrients.

How ludicrous then to apply any type of sun protection factor (SPF) oil/lotion on the human skin in the belief that it is protecting the human body. It is comprised of inorganic chemical ingredients that can

be absorbed into the body, but also, blocks the sun's beneficial rays that help the body synthesize the sun's natural energy into Vitamin D.

As an example to further demonstrate the skin's unique abilities visualize in your mind the following: if a castor oil soaked cotton cloth is folded and placed across the abdomen area of a person, then a moderately warm heating blanket/pad is placed on top with a protective covering (to keep the oil from leaking onto the bed or heater) and the oil is allowed to be absorbed for 30-60 minutes into the abdomen skin uninterrupted, something amazing occurs. During the course of the hour in most cases, the taste of castor oil will come out through the mouth. This demonstrates the castor oil penetrated not only the outer layer of skin and into the blood/lymphatic system and liver, but was also absorbed and circulated through the body. In some instances, an oily patch may be detected when using the toilet (#2) as a result of the castor oil penetrating into the body's GI system (reference: Edgar Cayce's castor oil pack). The same process applies for any synthetic lotions, cleaning creams, alcohol wipes, shaving creams, all types of makeup, aftershaves, deodorants, foot sprays, shampoos, cream rinses, soaps, colognes, perfumes, aerosol sprays, etc. that make contact with the human skin. The exposure to carcinogenic contaminants that can be absorbed through the skin and circulated throughout the body should be avoided.

The use of escharotics to naturally extract the complete skin cancer tumor and its mycelium roots from any part of the body's skin has been used for hundreds of years by native American Indians. This protocol is a more pragmatic solution in lieu of surgical excision and radiation than can leave remnant cancer cells in the wound site, and then are free to escape into the systemic blood stream. Ask yourself, is it better to continually cut a patch of skin every few months on the body to remove skin cancer (like cutting holes in a t-shirt everywhere to remove coffee stains) or is it better to simply wash the shirt and remove the stains (clean the body inside and out), thereby avoiding any holes or scars on the body's skin? Ultimately, the solution is not cutting out every section of the shirt or skin on the body, but rather cleaning and removing the catalyst that is generating the skin cancer from the inside of the body.

**10. Cancer (Others):** The list of cancers in the human body exceeds well over 100 different types. These are normally named for the organ, cellular structure or any specific detail that helps identify the type of cancer with the medical diagnosis. Cancer is potentially infinite in its

reach for both men and women, and has no cultural, economic or social aversion to share itself with all individuals. Other common cancer types are: Blood, Ovarian, Uterine, Cervical, Testicular, Lung, Rectal, Leukemia, Lymphoma, Colon, Pancreatic, Multiple Myeloma, Intestinal, Oral Maxillofacial, Throat, spinal, etc., and covers every organ and body part of the human body. Very little changes, except for the location. The pain and suffering are non-exclusive to any one type. The predominantly suspected root causes and allies for cancer development identified by alternative medicine practitioners hardly ever changes (western diet, animal proteins, Candida Albicans overgrowth, carbonated drinks, dairy products, contaminants, pollutants, radiation exposure, carcinogenic chemicals, etc.).

An imbalance of physiological homeostasis and a dysfunctional immunological defense system can result in the formation of an anaerobic and disease friendly environment. This can allow for the creation and growth of cancer cells (which are fed with anaerobically fermented sugars) and are the usual suspects (excluding nuclear and inorganic/carcinogenic chemicals which are ingested or absorbed and attack the body directly). These imbalances can be created by poor food consumption habits, the creation of a highly acidic environment, the infestation of parasites systematically and/or the slow expulsion of toxins and wastes from the body.

These are the constant and common denominators found in many degenerative disease processes, time and again. If any of these significant variables are changed or halted promptly, there is research that indicates diseases will likely have difficulty in further developing and may even be reversed, if it is already present in the body.

There are other diseases attributed to parasitic infestations and/or chemical pollutants absorption/ingestion (cancer and non-cancer causing) like Parkinson's disease: ingesting chemical pollutants that can be related to ingredients such as malonic acid seeping from tooth fillings into the brain, Alzheimer's disease: Aluminum accumulation in the brain from the environment, intestinal liver flukes and larvae migrating to brain and wreaking havoc as well, xylene and toluene absorption and saturation of the brain, Mad Cow disease: fungus and larvae infiltration into the brain that can cause tremors, lethargy, dementia and other similar signs and symptoms that can potentially masquerade as any other type of degenerative disease.

Western medicine historically focuses on treating the symptoms, vice finding and curing the root cause of the disease. For example, a hypothetical case in point to imagine in your mind: is it better to chronically flush out the mouth with a mint smelling mouth wash 3-4-5-6-6-9 times per day (or constantly chew fresh gum) to cover up halitosis or is it better to treat the multiple cavities, plaque buildup and periodontal disease that have been festering for years, untreated? Perhaps the individual has perfect teeth and the origin of the halitosis is not in the oral cavity. Perhaps it is manifesting itself from a putrefied and stagnant Gastro-Intestinal system and is suffering from leaky gut syndrome as well? Treat the symptom or treat the root cause directly?

One option provides a permanent solution while the other keeps the individual buying a useless product that can never cure the halitosis, only further debilitate the body and probably develop into a more painful degenerative disease systemically as time progresses. Why should the cancer business be considered any differently? Over 100 years of charitable donations have been incapable of finding a “cure” for cancer and researchers still continue to go down dead end streets, except the one road that can lead to real healing for mankind.

Is it possible the most likely reason why researchers branch off into all other areas except a healthy diet is because there is no profit earnings or bonuses dispersed in telling people to eat healthier, avoid pollutants and maintain an alkaline balance in the body? The cancer business would likely collapse if the charitable donations would cease to fill the coffers of the cancer business, their permanent business development staff and lobbyists who manage and control the money flowing in the cancer pipeline.

**11. Candida Albicans (CA):** This unique fungus has been found accompanying practically every type of cancer patient under treatment and in autopsy examinations. The CA fungus is believed to be a *prime catalyst* for the development of cancer by alternative medicine healers (e.g. Dr. Tumilio Simonchino Chapter 18). Conversely, the CA fungus is considered to be a *byproduct* of cancer by conventional medicine practitioners in the cancer business.

It is quite a dilemma when two different mainstream points of view, with different arguments on the etiology of cancer development, arrive at opposing conclusions about the same fungus. By the same token, a reverse analysis can be made: do healthy individuals, who do not have

cancer also have CA? Some do, but most do not and show no signs of any CA overgrowth in their bodies. Do sick individuals with cancer have CA? Yes, typically confirmed cancer patients have CA fungus overgrowth systemically in their bodies.

A very stark contrast in statistics that supports a direct link between cancer manifestation and the influence of CA on its growth in the body (a cause and effect relationship). Some common signs and symptoms of Candida infections in a person are: infected toenail fungus, white coated tongue, discharge from the vagina, foot fungal infections, fungal infection of the groin area, to name a few of the prominent sites. Candida is resilient and can systemically affect the whole body, very quickly. It should be considered in any self-evaluation as a probable catalyst in the development of cancer in the body or at least, a co-infection occurring simultaneously. CA is difficult to eradicate once it sets in the body. There are different locations outside of the body where it can also find safe harbor (moist and warm areas of the feet, groin, anus, etc.). Likewise, once inside the body, it can settle in practically anywhere of its choosing.

A fully functioning and healthy human body is equipped with a strong immunological defense system. When this is weakened or damaged, the body loses its ability to fully defend itself against bacteria, virus, parasites, fungus or any other type of pathogens. As the body debilitates further, the pathogens reproduce and further infest, saturate and weaken the body. If the immunological defense system is fully functional, pathogens are unable to enter it and begin colonizing at will. Understanding that simply attacking whatever physical manifestation (bacteria, virus, fungus, etc.) that is visible on the body will not necessarily address the root cause of how or why the body's immune system has not destroyed the invasive pathogen(s).

By proactively investigating potential causes, through a structured process of elimination (similar to the example provided in the Introduction Chapter), a general conclusion can be made as to what is the likely root cause of the ailment(s). Once conscious awareness unfolds on how the body functions and why it reacts under certain environmental conditions, an individual has the ability to comprehend why the body is lashing out with disease. It is the body's emergency response mechanism not only to draw attention to the spiritual occupant of the body (that it is improperly operating, feeding and maintaining the body), but it is also attempting to quarantine (into a

cyst/tumor/boil) the sickness in the body so that it cannot spread and do no more serious injury to other parts of itself. If this emergency effort fails, the body may seek out other means to neutralize the pathogen/disease state as best it can in whatever way possible.

The Medical Profession Doesn't Want You To Know About by Rolf Hefti

## Observations & Analysis

**A**s you read every word in the preceding chapters, you likely detected several common denominators and risk factors that have been identified as reoccurring throughout the cancer research process. These appear to be the usual suspects for the development of a degenerative disease, including cancer for the average person. There is no high tech scientific method or peer review laboratory analysis conducted in this book that cost millions of dollars, but rather the culmination of observations, repetitive pattern formations and common sense conclusions. *(Comment: The Scientific Method is an irrelevant and flawed system, with a corruptible and unsound foundation. Even when the results validate any particular finding, evaluators have had a history of skewing the results to favor their biased views or rejecting them if they challenge the established views and present-day agendas, or threatens the economic and political status quo.)*

The scientific community has fostered the scientific method as the gold standard for validating or discrediting any type of medical/scientific research or discovery. When the system is broken, unresponsive, biased or favors a pre-determined outcome, is it worthy of public trust? Trust should be in oneself and the decisions that the subconscious shares with the conscious mind. Through personal education, application, experience and assimilating the opinion of those others who have gained your trust and respect, those are the individual variables that command credibility and an educated opinion can be derived of them. A medical journal that directly or indirectly receives advertising money from the same industry it oversees, or a research facility that is sponsored by an industry that has direct financial interests at play in determining effective products, cannot be deemed as independent, arbitrary or credible. Rather at best, they should be considered as

merely paid commercial extensions of the industry that are attempting to pass themselves off as authoritative sources of knowledge and credibility. In reality, these should be identified as registered lobbying groups or as the classified section of the industry, promoting its own biased agenda and products.

### **Genetics Disinformation - The Family History of Cancer**

The assertion that family genetics passed on from the parents to their offspring is a primary factor in developing cancer in the next generation is perceived as mainly a scare/fear tactic to falsely indoctrinate individuals to think they have no escape from cancer. That somehow, their DNA was so corrupted or altered at its inception and formation to a point that the human body becomes completely susceptible to pathogens that cause the development of cancer in the breast, prostate or other location in the body is an unfounded affirmation. When this statement is made, it generally implies the individual does not have a complete understanding as to what the cause is and is using “genetics” as the default scapegoat to avoid the appearance of not knowing the answer, or is clearly cognizant of the catalyst that formed the cancer and is purposely deflecting responsibility to avoid publicly identifying the real provenance of the cancer. A hypothetical example is this: how is it that one of two biological twins can develop cancer while the other exact biological twin shows no development of any cancer and lives a long and healthy life? They are technically and biologically 100% exact twins. The argument does not hold water from a genetically inherited perspective of cancer. There is no correlation between the two, especially if they have lived together most of their lives.

If there is a history of female cancer in the family (sister, aunt, cousin, mother, grandmother, etc.), by default, all female members of the family are injected with fear that they will likely develop the same type of cancer as well. This fear based tactic to keep future cancer customers in line is psychologically convincing, until the individual person researches and discovers there is a very miniscule possibility of acquiring the same cancer disease the parent or family member had previously contracted. A more likely suspect is a poor nutritional diet (western diet) or exposure to contaminants that they all share together at home or work. There would be other variables such as quantity-quality and concentration of foods that would vary from person to person in the home as well.

Arguments have been made (for and against) on the myth that family genetics is a major contributor to cancer's development in the body. Taking into consideration the many other risk factors previously identified (radiation contamination from dental and chest x-rays, mammograms, radon leaks in the home, granite counter tops radiation emissions, environmental contaminants and pollutants, weakened immunological defense system, lifestyle habits, exposure to carcinogens and various other factors), one of the main theories continues to be based on malnutrition and poor dietary habits. The western diet is high in animal proteins, processed foods, refined grains, sugars, carbonated drinks, dairy products and many other types of processed foods that lack nutritional value. These types of weaponized foods provide minimal nutrition for assimilation while saturating the body with trans fats and less than nutritional choices of edible garbage.

Picture this hypothetical analogy in your mind that if three generations (grandparents, parents and adult children) live in the same household, and all three women (grandmother, mother and granddaughter) develop breast cancer, it must be genetic. The same applies for the three men (grandfather, father and son) developing prostate cancer, that it must be genetic. It would be a logical conclusion based on conventional medicine beliefs of the irrelevant, flawed and unreliable scientific method. Given that the medical community claims to still not know or understand why cancer develops, it is difficult to accept the conclusion that cancer is genetic or that a family history of it is even relevant to individual cancer formation in a person's body (except maybe exposure to the same contaminants/pollutants/dietary habits).

A more logical process to determine the root cause of cancer development (breast, prostate, others, etc.) in the same household would be to conduct an in depth analysis/investigation as to what each of the occupants has in common and identify any likely catalysts. When conducted, a random checklist would entail inspecting individual variables such as:

#### **Short checklist**

1. **Water contamination** – chlorine, aluminum oxide, and fluoride in shower, tap, pool water, garden vegetables, etc.
2. **Air contamination** - central A/C unit, filters, neighboring businesses, factory smoke stacks, local incinerators, etc.
3. **Radon (radiation)** - leakage into the home from underground or radioactive waste material in soil.

4. **Cleaning products** - laundry soap, shampoo, hand soaps, bleach, ammonia, glass cleaners, table top cleaners, wood polishers, disinfectants, aerosol sprays, drain and floor cleaners, benzenes, cleaning/wood alcohol, etc.
5. **New clothing** – unwashed, containing Azo-dyes (carcinogens) absorbed through the skin before washing.
6. **Metal poisoning** - excess aluminum, copper, nickel, chrome and other metals absorbed through cooking utensils, pots-pans.
7. **Microwave oven radiation** - excessive emissions, standing too close while operating, leaking or damaged unit.
8. **Domestic chemicals** - furniture, carpet, curtains and other items emitting toxic or carcinogenic formaldehyde from their cloth and wood preservatives in their construction.
9. **Industrial Chemicals** - paints, thinner, varnish, gasoline, diesel, oils, fertilizers, pesticides, other chemical products stored in house/garage that can seep into household unabated.
10. **Electromagnetic** - exposure from nearby cellular phone towers, TV, radio towers, power lines, Wi-Fi, Compact Fluorescent Light bulbs (CFL) continuous emissions throughout household, etc.
11. **Weaponized food** - consumption of processed and refined foods, western diet, dairy products, refined grains and sugars, foods with inorganic ingredients that cannot be assimilated like steel shavings (iron) in cereals or calcium.
12. **Systemic physiological collapse** - poor GI system habits with one or less irregular bowel movements (BM) per day that contribute to accumulation of wastes in the bowels that accelerate putrefaction and secretion of toxic wastes into the body, destroying the body's natural immunological defense system, congested and polluted lymphatic system, circulatory system and debilitating the GI system to allow the infestation of parasites and other pathogens.
13. **High body acidity** - low alkalinity in the body, resulting in an anaerobic environment that is ideal for the propagation of degenerative diseases and cancer formation.

You are the investigator sent to discover why some or all of the occupants in the same family develop the same cancer; what is the common denominator between them that you identified? Is it poor diet, contaminated water, pollutant exposure or other? Once the different potential catalysts are identified and the usual suspects are narrowed down, a more tangible list of potential suspects can be

further examined. What if there is asbestos seeping from old roof insulation into the central air conditioning, affecting the women mostly since they are home makers? What if there is an accumulation of toxic paints and chemicals in the unventilated garage and these are seeping into the air where the men all do wood shop work on the hot weekends? The many benzenes, lacquers, finishes and paint vapors affecting them more than the women by their constant exposure in the afternoon heat, etc. The possibilities for contamination are infinite and require a detailed analysis to develop a conclusion.

The list above is a random and abridged version of potential catalysts. An even more detailed and expanded checklist can help further determine common denominator links between each of the occupants in the home. There are many other variables that have to be taken into consideration as to what may be the ultimate culprit(s). Any one of the above, or combination thereof, may be the catalyst(s) for the development of any degenerative disease, including any type of cancer.

The list of usual suspects is long and may seem as innocuous as making popcorn (GMO corn?) in the microwave (electromagnetic damage to the corn), adding margarine (contains trans fats) and generic salt (toxic fluoride ingredient in some salts) for flavoring or preservatives mixed in to form some toxic cocktail combination thereof. Some of these individual ingredients have been associated in research as catalysts for the development of degenerative diseases unilaterally. Perhaps only the women ate the popcorn, margarine and fluoride salt copiously every night and that the diet (not genetics) was the catalyst for their combined breast cancer. Perhaps if the men had also consumed the popcorn, they may have developed another form of cancer, no one knows for certain and cannot claim that those were hypothetically, in fact the causes. The point is that defaulting to the “genetic” scapegoat for cancer development is not a valid response. More in depth analysis is required by the cancer patient as well as the health care practitioner to isolate and identify the true catalyst(s) for the development and manifestation of any cancer in the family. What are the connections?

After reviewing and analyzing the many books, articles, journals, research papers, testimonials, statistics and so many other supporting documentation on cancer overall, a conclusion comes to the forefront. There are at least three (3) major contributing factors associated in the development of cancer that have been identified as pertaining to the list of the usual suspects, resulting in the manifestation of cancer anywhere

inside or outside of the body. Documented patient histories and patient follow up studies support the conclusion that at least one (and up to all three) of these processes can lead directly to the manifestation of cancer. When the root causes were removed or negated, there was either an arrest, reversal or eradication was observed in the individual.

### **Three Major Contributing Factors**

1. **Radiation:** radioactive material, body x-rays, chemical carcinogens absorption and ingestion, electromagnetic exposure by cellular towers and electrical power lines, irradiated pollutants exposure in air, water, food, etc. Once the root cause or source is identified, the physical body should be removed to a non-contaminated location a safe distance away. Follow up action would likely involve removal, containment or isolation of the catalyst if possible and higher level containment activities conducted if necessary. Nuclear-radiological contamination would likely require Potassium Iodide supplementation to protect the thyroid gland, while implementing any necessary decontamination protocols. Electromagnetic radiation would likely require radiowave cancelling measures or non-use of equipment that generate them (cellular phones, Compact Fluorescent Light bulbs – CFL, etc.). Ingestion of carcinogens would likely require chelation of poisons and other inorganic materials from the body. Pollutants would likely require effective filtration systems be utilized and new sources of food (organic, non-GMO, distilled or reverse osmosis H<sub>2</sub>O, air scrubbers/filters, etc.) to avoid further contamination. This is probably the most difficult of the three categories as the causative agents may have caused irreparable damage to cells and organs in the body. Likewise, urban and rural areas each pose unique challenges to access viable (uncontaminated) water and food supplies. Other likely variables for additional consideration:
  - a. Decontaminate body (cleanse outside/inside of body).
  - b. Physically remove contaminants when safe to do so or move away from location if not feasible (cellular phones, towers, power lines, factory wastes, fluoride in water, toxic cleaners and chemicals in home, radon leaks, etc.).
  - c. Avoid supplemental exposure (move away, shield, neutralize, etc.) by protecting against any additional body exposure to harmful chest x-rays, mammograms and other carcinogenic

producing practices. These have been identified as likely causing more cancer in women/men than actually preventing it. Research studies repeatedly come to the same conclusion that any type of x-ray exposure is detrimental/accumulative to the human body and is ineffective for preventative use in cancer prevention.

2. **Acidosis:** in the body and malnutrition caused by poor dietary habits (western diet – processed foods, carbonated drinks, refined sugars, heavy animal proteins, dairy products, etc.) have been shown to result in the development of putrefied waste buildup and slow peristalsis action in the gastrointestinal system. This then can lead to the production and release of dangerous toxins within the body. These wastes subsequently can saturate the body with toxic excretions, resulting in systemic acidosis (high acidic pH) and the creation of an anaerobic environment that is ideal for cancer cell growth. This progresses to fermentation that then produces additional sugars to help feed the cancer cells. Poor diet turns into toxin production. Toxins release into body and organs. Fungus and cancer can then grow and manifest as tumors/cysts. Once the GI system is cleansed of the putrefied wastes and toxins, the body is converted into a more alkaline pH that is not conducive to cancer cell formation. If an alkaline forming food consumption diet is then maintained, cancer is unable to survive in the aerobic environment (Dr. Otto Warburg, Nobel Prize winner). Variables that can be considered to create an alkaline environment and homeostasis are:
  - a. Cleansing the body organs as applicable (intestines) by performing colon plaque cleanses that purge and expel the putrefied wastes and parasites every 6-12 months for life.
  - b. Cleanse the liver of impacted bile stones and parasites every 6-12 months for life.
  - c. Cleanse the kidneys of accumulated salts and stones every 6-12 months for life.
  - d. Cleanse the blood system regularly to remove toxins, parasites, etc. that have entered into the blood stream via a leaky gut or toxic overflow from the lymphatic system. This should be conducted on a regular basis over a lifetime.
  - e. Cleanse the lymphatic system of accumulated body, blood and food wastes. This is the body's *internal* sewer system and if not purged regularly, it can become backed up and overflowing back into the blood stream, causing further

degenerative diseases to the body organs, skin, etc. Dry body skin brushing, moderate exercise or 10 minutes on jump rope, mini-trampoline or other exercise may be of benefit to helping move stagnant lymph material out of the lymphatic system and body. The kidneys should be cleansed prior to ensure the wastes are expelled from the lymph system. This process should be conducted regularly for lifelong benefit.

3. **Parasite infestation:** multiple varieties of flukes, worms, eurytrema, fungus, etc. of the organs, brain, blood and/or lymphatic systems. Once the body is invaded with these alien parasite species, the larvae can migrate throughout the body unimpeded, wreaking havoc and destabilizing the proper functioning of any individual or collective organs. Once all parasites are eradicated, homeostasis of the body can be reached more readily and the body healing process can begin. The various different species of parasites have been linked to varied diseases and benign/malignant tumors-cysts throughout the human body. They have also been linked directly with the development of cancer in diverse organs. When parasitic larvae migrate into the brain (Cysticercosis: caused by Taenia Solium – Pork Tapeworm) or into the pancreas (Pancreatitis- diabetes: caused by Eurytrema Pancreaticum – Pancreatic Fluke) and have overpowered the body's natural immunological defenses, these organs subsequently can develop different forms of cancer. When they have been treated with effective anti-parasitic natural remedies (black walnut tincture, wormwood tea, freshly ground cloves capsules and other natural anti-parasitic plants), individuals are known to have recovered their health and their previous growths receded or disappeared. Direct cause and effect events. Conventional medicine historically classifies these tumor/cyst reversals as a spontaneous healing of unknown origin. Some variables that can help create body homeostasis are:
  - a. Cleansing the inside of body organs to remove the stagnant and putrefied waste products that attract and harbor the parasites-worms-fungus, etc.
  - b. Cleanse the liver of impacted bile stones and parasites, thereby removing breeding colony safe havens and breaking their life cycles (eggs, larvae and adults).
  - c. Changing dietary habits to remove processed foods, refined sugars, dairy, animal meats, poultry and other inorganic

products from clogging the gastrointestinal system, thereby promoting effective peristalsis (continuous movement of waste products (e.g. 2-4 bowel movements per day).

- d. Not mixing proteins (requires an acid environment in stomach to metabolize) and carbohydrates/sugars (require alkaline enzymes in the stomach to process) in the same meal as these opposing food groups counteract each other during the digestion process (acid versus alkaline) in the stomach. These opposing food digestion processes need to be separated to effectively digest the food efficiently.

A more universal analysis and synopsis of potential catalysts and some of their unique characteristic markers to halt, reverse and prevent the development of all degenerative diseases (including cancer) should be considered and expanded upon. Any individual or combined catalysts can potentially be the unsuspecting prime suspect for cancer development. The following individual factors should be considered in the overall assessment process.

### **Potential Catalyst(s)**

***Clean Water:*** Not all water is alike in every community. Some elect (via their city councils/mayors) to have toxic fluoride and other chemical pollutants added to the potable water supply, while other communities comprehend the inherent dangers of fluoride in the human food supply chain and emphatically reject their use as a deadly poison against humanity. Those communities whose political leaders have sold out their constituents likely have been deceived by others through their naivetés or are directly complicit in this structured human culling and reproductive sterilization of mankind (***“The Fluoride Deception” and “Water, Salt, Milk – Killing Our Unborn Children”***). While other educated countries have outlawed the use of fluoride in their potable drinking water supplies (or any other use), the USA and a few other complicit countries have increased their importation of this toxic waste byproduct (fluoride) that cannot even be disposed of in landfills because of its toxicity and threat to all life. The use of clean water for drinking and cooking (no fluoride, chlorine or other contaminants in the tap or bottled sources) is better in less developed nations than in the USA. These only need to worry about lesser pathogens that can be eradicated with safer methods, in lieu of toxic and deadly chemicals. Avoidance of passive absorption (contaminants) through the skin via the shower, pool or any other

water source is achievable by installing reverse osmosis water filters at home and at the work place. Even distilled water contains contaminants, thus must be filtered with effective reverse osmosis water filtering systems to ensure it is free of all toxins. Expensive air conditioning, heating, plumbing, electrical and other amenities are installed at home and life cycle costs are projected for many years of occupancy and use. Why not invest in clean, potable drinking water for the family by installing a reverse osmosis or other effective type system at home? It will pay for itself by avoiding the health insurance bills and sicknesses that can be prevented by drinking clean, potable water over the life of the home? Water is most likely the most important commodity humanity has, why trust the government or other disinterested agency in ensuring the health of the nuclear family, especially when they have failed its own citizens by allowing fluoride from the onset?

**Clean Air:** It is probably safe to say that not all air is alike in color, smell, texture, consistency, quality and appearance. Air from a smog filled city is not as clean as air in the deep country. Likewise, the air of a residentially zoned housing area is generally much cleaner than a commercially zoned area. However, when industrial chimney stacks emit plumes of toxic chemicals into the air (normally in compliance with extremely low Environmental Protection Agency (EPA) rules for acceptable emissions in an industrial zoned area) the plumes do not recognize or respect invisible housing zones, boundaries or regulations. As is commonplace, one only needs to investigate the border towns of any chemical or industrial complex. The air contaminants and pollutants fly through the air, affecting all things within its reach (humans, livestock, pets, birds, wildlife, vegetation, crops, fish, trees, water, etc.). Is it better to live in an inexpensive housing community that is adjacent to one of these industrial facilities and possibly suffer from poor health or would it be better to relocate the family to another location, away from the pollutant source(s)? There are many instances of air contamination passing through invisible boundaries that are not respected by the air currents or even enforced by the government. Small fines are given to the businesses that emit the toxins, after they have already been dispersed over the communities. Meanwhile, the individual resident who breathes in the contaminated air and suffers poor health is left to fend for himself with all the medical bills and physical health issues. A simple example would be the Chernobyl nuclear incident in Ukraine, 1986. The nearby town was evacuated and is still a ghost town today (evacuated and abandoned), more than 30

years later because of the toxic fallout. What is not mentioned as much is the radioactive cloud that languished over Western Europe for the many months and years following, covertly affecting the many millions of residents, livestock and crops of each country who were oblivious to what was transpiring above and around them. Their many governments turning a blind eye to the health dangers that enveloped all of them. Another example, closer to home in the USA (one of many EPA Toxic Super Fund sites and over 1,000 National Priority List – NPL locations) is the town of Picher, Oklahoma. A forgotten casualty of lead mining operations that had to be abandoned because of the health and safety risks. Similarly, many decades previously in Love Canal, New York, this residential area experienced long term contamination from toxic wastes that were buried into the ground and leached out, affecting the local air, water and soil. There is no statute of limitations for how long toxic poisoning and exposure can continue to effect humans and animals by buried or invisible pollutants and toxic chemicals.

***Clean and healthy Food:*** What defines a clean or healthy food supply? Grown organically, processed humanely, less preservatives or by what standard is it catalogued? Clean food is the cleanest food you can obtain in whatever region of the country you are confined to working and living in. A clean carrot from the countryside may be more contaminated (if saturated with pesticides and GMO chemicals) vice a homegrown carrot perched inside a windowsill in a major metropolitan city. Processed and refined foods are now basically weaponized against humanity. When the foods that are eaten can harm or eventually kill its consumers (directly or indirectly through illness and slow diseases processes) then they should not be considered clean or healthy food, but a biological-chemical weapon. Likewise can be said for all types of animal proteins, in all their different levels of processing. The barons of the food industry have been able to squeeze out as much profit (and nutrition) from the food chain supply that there is little, if any, nutrition remaining in the processed and refined foods eaten in the western societies today. Adding inorganic vitamins, minerals (rocks) and iron (metal shavings) that cannot be assimilated by the human body, to the processed foods as artificial replacement for the missing vitamins and minerals does not equal healthy food. Those who have knowledge of eating wholesome and clean foods fare a better chance of consuming healthy foods. Many imported foods lack the rigid sanitary and health controls needed to ensure safe foods are being commercialized everyday.

The astute and nefarious global business tycoons have learned to game the system over the last century, thus bypassing many of the safeguards that were put in place to protect the end consumers. The search for the bottom dollar profit has superseded the health of the many. Individual situational awareness and attention to detail are the last bastions to protect against contamination and sickness. An individual should not place their misguided trust and faith in a governmental system that has never been intended to protect their interests, but rather those of international food business conglomerates and the profiteers within them. The larger the government role in any area, the less accountability or oversight from any participant and the deeper in the shadows the executives can camouflage and slip away from the public's prying eyes. If the food label contains words that cannot be pronounced, it is likely not wholesome. If the drink can remove rust and oxidation from metal, it is likely not beneficial for biological life consumption. Choose your weaponized poison or choose your health. As the spiritual occupant of the human body, it is ultimately your responsibility to operate, care for and maintain it. You are directly liable for any dysfunction, damage or negligence to it, no one else.

**Nutrient & Mineral Awareness:** The chronically over harvested soils of today are nutrient and mineral deficient, incapable of providing humanity with the same level of nutrition as of 100 years past. The genetically modified organisms (GMO) plants and foods derived from soils devoid of adequate nutrients leave the individual unaware of their systemic malnutrition. More is eaten, but the nutritional value is less. All food crops farmed require the soils to be adequately nourished with vitamins and trace minerals. Many soils are being saturated with toxic and dangerous pesticides, fertilizers, pollutants and chemicals, etc. and produce food crops that are mostly physical shells, deficient in nutritional value internally. Awareness of the requirement to consume organic and wholesome foods (raw, unprocessed or refined) is suggested as a major part of disease prevention and recovery in alternative medicine. Healing the body and then saturating it with unhealthy foods will revert the physical body to a weakened and ultimately, a diseased state. A body that has homeostasis cannot become ill. Only a weakened body / immunological defense system can allow bacteria, virus, parasites, fungus and other disease processes to manifest, including cancer. Synthetic vitamins and inorganic supplements cannot replace organically occurring vitamins and minerals in plants.

If you were unaware, plants naturally absorb and assimilate all their organic nutrients, vitamins and minerals from the soils. These are the natural vitamins and minerals that can be assimilated and the human body needs for a healthy lifestyle. If the plants are eaten in their whole state (not processed, canned with preservatives and chemicals, etc.) the body can absorb and assimilate all the organic vitamins, minerals and other nutritional components. Inorganic vitamins and minerals consumed from processed foods can accumulate inside of the body (like inorganic calcium, iron, copper, etc.) and lodge themselves in joints, organs or any part of the body it finds acceptable and can lead to pain, inflammation and other anomalies.

Research has identified that consumption of dairy products (milk, cheese, ice cream, etc.) leaches out calcium from the skeletal body. Once the dairy products enter the body, they convert into acidic foods. The body, in response to the increased acidic levels, is referenced as extracting calcium from its skeletal bones to complement the bile and help neutralize the acidity in the intestines. Thus, the increased consumption of Vitamin D (dairy products) has been shown to actually increase acidity in the body, resulting in the body leaching off its own calcium supply to neutralize the increased acidity levels. How ironic that what the layman believes is providing more calcium to help fortify and strengthen the body's skeletal system, is probably contributing to its depletion.

Is it any wonder why the USA has one of the highest consumption levels of dairy products on the world level, yet also has one of the highest incidences of hip/pelvic fractures in the world also due to calcium deficiency? Sugar poses a similar challenge in that once ingested, it also leaches out calcium (from arteries and veins), resulting in the development of varicose veins, hemorrhoids and other calcium deficiency afflictions. Consuming inorganic calcium does little to counteract the depletion, as it cannot be assimilated into the body properly. Foods containing natural calcium (white oak bark powder, other plants, uncontaminated seawater, etc.) can be used to replenish any vitamin or mineral depletion naturally. There are over 90+ essential vitamins and trace minerals that the body must have to function efficiently. If any are lacking, there is a systemic effect and places a nutritional imbalance on the body. This results in an unhealthy burden on other body systems to compensate for the deficiency, in order to function properly.

***Physical Exercise:*** The simple habit of walking daily has the benefit of increased blood and lymphatic circulation in the body. The rhythmic movements of the limbs and increased cardiovascular output keeps the body producing energy and expelling wastes. Conversely, the lack of any or reduced physical activity has an equal effect on the body. The principle “use it or lose it” stands out and is applicable. As in a car that sits idle in the barn for days-weeks-months-years-decades, it begins to deteriorate and break down without use. Rubber tires usually have a life cycle of 5 years before the dry rot kicks in. The same for any rubber component like radiator hoses, fan belts and gaskets. As more years elapse, the rust penetrates deeper into the chassis and other body components. The human body is similar in analogy. In lieu of the rust, however, the body can develop any number of manifestations due to its inactivity. Physical exercise is paramount to not only maintaining a healthy body, but also as a means to burn off accumulated energy and stress. The constant movement of the muscles, flow of blood and lymph material help prevent the accumulation and formation of pathogens in any particular location within the body, thus passively helping to prevent the manifestation of any type of degenerative disease. Likewise, the excessive exertion of physical exercise can be just as damaging.

You probably know a person who is a marathon runner and constantly runs 10 miles daily or more and consumes a standard western diet. It will only be a matter of time before their body manifests a disease. The many vitamins and minerals (e.g. magnesium, chromium, manganese, selenium, lithium, germanium, gallium, phosphorus and many others) that the runner’s body needs to function normally on a daily basis are constantly depleted. If these are not replenished consistently with a broad based diet, these can have a negative effect on its normal body functions. If the marathon runner is 30-40 years old (or any age) and already has significant gray hair, he is already likely to have a vitamin/trace mineral deficiency. This gray hair is likely a sign of a systemic copper deficiency in the body. Also, weakened arteries/veins subsequently result from the deficiency and can form aneurisms (weakened blood vessel walls) anywhere in the body (brain, aorta, etc.). Unless a conscious approach is taken to proactively replace each of the many *organic* vitamins and minerals consumed, the runners body may experience an insufficiency breakdown. Moderation in exercise, complemented with consumption of organic and wholesome foods and clean water to replace those nutrients expended daily should help maintain a healthy and balanced body.

***Lifestyle habits:*** The daily routines and patterns that are created in early childhood development can carry over into adulthood quite easily. Those habits (good and bad) that were learned by watching others, formal education, the nuclear family, social outlets, TV, movies, music, peers and so many other contributors are the role models mimicked. Things like what time to awake in the morning, to eat a full or partial breakfast (if at all), physical exercise or sleep longer, read the newspaper on the toilet for an hour with a cigarette in the mouth (producing hemorrhoids) or a quick in and out, shower in morning with scalding hot or cold water, at night or both? Is the breakfast filled with processed foods and refined cereals (with supplemental metallic iron shards for minerals), dairy products and other items from the food pyramid hoax bad? Perhaps some freshly squeezed orange or carrot juice from the juicer, followed up with some organic millet or oatmeal, fresh fruit and nuts is good? Perhaps after lunch, a 1-2 hour siesta is taken on the bed or sofa. In the office/work, if bowel movements (BM) are suppressed and prevented (bad habit) throughout the day because the belief that the office bathrooms are unclean, convince the person to “hold” on until getting back to the home toilet can have significant physiological impact on the GI system, psyche and homeostasis of the body.

Long term effects can be dramatic and unhealthy. Is perhaps the dinner meal celebrated at 5-6PM good or 9-10PM bad? The later the meal, the less the bile production available to help process the meal. The later the meal, the more likelihood of gastric reflux developing if the individual lays down not too long after eating. The natural digestion process and peristalsis is affected by any number of variables. Those habits that are firmly established in youth can carry over into adulthood. Good or bad, each should be analyzed and validated as either a positive or negative habit that should either be maintained or replaced. Taking a nap immediately after eating a meal is not a good lifestyle habit, unless gastric reflux disease or an early death is the intended goal. There are many lifestyle habits that should be considered individually or as a couple (if applicable). Natural biological waste excretion processes should not be hindered by social beliefs or unfounded fears. The human body is a perfect machine and knows what to do, in spite of what the spiritual occupant thinks it should be doing. Step aside and allow the body to naturally perform its daily functions unimpeded or it may simply decide to shut down the body itself, unilaterally, until it can regain systemic homeostasis (normally a high fever with no desire to consume any foods – a direct form of fasting to expel the wastes).

***Awareness of Environmental Pollutants:*** There are a multitude of pollutants that can directly and indirectly affect the human body. Electromagnetic radiation from cellular phone towers, radiowaves, electrical power lines, nuclear power plants consistently emitting low doses of radiation (below the acceptable government limits), chemical (bleach, paints, cleaners, acids, etc.), manufacturing (clothing dyes, automotive parts, plastics, etc.), food industries (animal waste runoff and body parts from pork, beef, poultry, fish and dairy), agricultural (pesticides, nitrogen, phosphates, fertilizers, etc.) to name but a few. When these pollutants are released into the air, the water systems and landfills, they inevitably find their way into the human food supply chain in one capacity or another. Whenever the rains arrive and come down upon the thousands of acres of agricultural lands; the fertilizer and pesticides then runoff into the local creeks, streams, rivers and eventually flow out into the main river arteries and ultimately, the nearest ocean.

Satellite imagery has repeatedly identified toxic kill off areas along the coastline (e.g. Gulf of Mexico Dead Zone) that have produced massive fish kills and dead regions. These have been traced back to uncontrolled runoff from farmland fertilizers or animal processing plants that dump their residual wastes into the water system. Fines are sometimes issued, but it appears little if any, definitive corrective action is enforced by the government oversight agency. These combined pollutants ultimately touch every individual within their region via the drinking water they are exposed to, the air they breathe and the foods they consume (in one capacity or another). All the while, simultaneously being bombarded with the electromagnetic waves of internet Wi-Fi and cellular towers everywhere. The individual cell phone is a toxic emitter of low dose electromagnetic radiation and provides daily dosage of radiation to its user.

The cumulative effects will only be shared with the public at large when the government mandates full disclosure (unlikely) to the public or the industry auto regulates itself (less likely). Individual situational awareness is the only recourse that can prevent the development of degenerative diseases like cancer from forming. Simply by taking basic corrective actions (like using a hands free ear piece instead of placing the phone on the side of the brain and speaking directly into it is a good option for example) can make a significant difference. More situational awareness equals more options and potentially better overall health.

**Protection Against Contaminants:** Absorption into the skin of different chemicals, toxins and compounds that are mixed in with regularly used consumer products can be the foundation for the development of any type of diseases. Simple items like soap, shampoo, toothpaste, cream rinse, hair dyes, mouthwash, body lotions, shaving creams, air fresheners, laundry soap, deodorants, perfumes, rubbing and wood alcohol, benzenes from various products (dyes in new clothes), PSA in plastics, hairsprays, acetone for fingernails, sun tan oils, sun burn protection lotions and the infinite list of consumer oriented products that inherently contain chemicals and contaminants.

When an individual becomes cognizant that the accumulative effects of individual and collective contaminants can have short-mid-long term effects on the human body, conscious awareness and the decision making process evolve to a higher level. If the realization that applying toxic sun block lotion to the skin can result in damage to its cells, would this change the individuals' lifestyle habits? When the sun breaks down the individual components of the lotion and these individual chemicals are subsequently absorbed into the cellular tissue (the human skin is porous and absorbs nutrients and breathes air through it as well), what is the short and long term effect? Does it weaken the cellular structure and permit the development of fungus/cancer within it? The same analysis is applied to the absorption of benzenes and PSA into the body's many organs and the development of other viable disease processes.

If any liquid, cream or lotion touches the skin, it can potentially enter into the body. By proxy, any clothing that is contaminated or saturated can also penetrate the body if there is skin moisture present that allows the absorption of chemical agents. Awareness can make the difference between sickness and diseased. Throughout the investigation of the many doctors, researchers, scientists, health gurus and others on the origins of cancer, their treatment protocols, case studies and so many other sources, one of the main denominators that has consistently been identified is an inadequate diet. Time and again from the many patients referenced, the dietary food habits seem to always be at ground zero for self inflicted degenerative disease formation, including cancers of all types. Refined foods, GMO, sugars, carbonated drinks, fast foods, trans fats, animal meats, dairy products, poultry, fish and the full spectrum of nutritionally deficient processed foods are the usual suspects in promoting and maintaining nutritionally deficient human bodies.

Once the nutritional imbalance is established in the body and the immunological defense system is weakened, the front door is opened for the development and manifestation of degenerative diseases. Another primary denominator consistently found to be a catalyst in cancer patients is the parasitic infestation of the body by any number of parasitic species. The varied intestinal worms, liver flukes, pancreatic flukes, intestinal flukes, pinworms, roundworms, tapeworms (pork and beef species) *fasciolopsis buski*, larvae, *candida albicans* fungus, biofilm and other parasites have the tendency of penetrating or burrowing into the vital organs, brain, intestines, lungs, prostate, etc. Once inside, they can establish their life cycle indefinitely, until they are eradicated. In some instances, they are never detected while the individual is alive since they are asymptomatic. However, if upon death an autopsy is conducted, the parasite load and colonies can be detected. For example, is the formaldehyde normally injected into a human cadaver before burial (for preservation purposes) more appropriately used to kill off any still living parasites/worms in the body instead of simply preserving the body in the refrigerator? A supposition is that a cadaver would likely be devoured much quicker if not injected with the toxic chemical before burial. Unless fly maggots are purposely placed in the coffin with the cadaver, how could these enter into a sealed coffin and consume the body otherwise? The worms were likely always inside the individual and was completely unaware of their parasitic colonies throughout their life time.

These varied species of parasitic invaders can disrupt any organ's natural function (e.g. *Eurytrema Pancreaticum* or pancreatic fluke infestation of the pancreas has resulted in a dysfunctional pancreas, diabetes, pancreatic failure or diagnosis of pancreatic cancer). Similarly, the *Taenia Solium* (pork tapeworm) can migrate to the brain and form a single or varied cysts/tumors. These can be asymptomatic or masquerade as cancer for years as they grow larger and propagate in the brain. Until the many species of parasites are eradicated wherever they dwell, the body's organs and immunological defense system constantly struggle to maintain their strength and combat the invaders as best they can. It is possible that in some instances, the body may be under multiple attacks: toxic pollutants, chemicals agents, parasites, western diet, environmental contaminants, etc. Under these multi-front attacks, a single anti-parasitic treatment may seem ineffective as the other variables may mask any effectiveness that could have been achieved with the single protocol, leaving the individual to believe the treatment was unsuccessful when it may indeed have been successful.

Perseverance and commitment are required to overcome and succeed. In many instances, repetition of the protocols may be necessary as new parasites can migrate to the previously infested site, replacing those parasites that were recently eradicated. A blogger, editorialist, partisan hack, lobbyist, spokesperson for any chemical/pharmaceutical company has little recourse except to use fear tactics, skewed statistics, fabricated or exaggerated case studies, government law enforcement resources or a wide selection of other tools to keep a person in line with the cancer business goals and objectives. Any individual, private or public group cognizant that there are alternative medicine protocols available to relieve their cancer suffering are likely considered a major economic threat to the industry. Should medical knowledge be released into the public mainstream, and public awareness achieved, the cancer economic business model may experience an abrupt collapse.

The multi-hundred billion dollar cancer business is ever attentive at bombarding the population with cancer propaganda. Always at the forefront and only a few years away from finding a possible link that can finally solve the cancer mystery. Over 100 years of investigation and billions of dollars invested in research to find the ever-elusive cure. The human capital investment estimated at over 100 million lives affected or lost (great-grandparents, grandparents, parents, children, babies, fathers, mothers, brothers, sisters, sons, daughters and friends) all around the world, over the last 100 years. The brave health practitioners referenced in the previous chapters are just a few of the individuals who fought against cancer and to a large degree, were successful in remedying the diseases in their patients. Some were less fortunate in that the sentinels of the cancer business detected their activities and successfully intervened to halt their aspirations to find a cure for cancer (arrested, stricken of medical license to practice medicine, imprisoned, etc.).

Many of these pioneers concluded that cleaning out the GI system, liver, kidneys, fasting and removal of inorganic minerals and parasites in the body was a primordial first step requirement. Without this process, diseases would always be present or continue to manifest. The consumption of clean, wholesome and nutritious food/water was the other major component needed to strengthen the immunological defense system so that the body could protect itself from disease and pathogens effectively. The remaining component was to avoid absorption of pollutants/contaminants to minimize the accumulation of toxins in the body that might weaken the body's ability to function.

These are the major observations and take aways from their combined efforts. Analyzing the varied protocols, each is uniquely different in how the cancer was cured and none of them affirmed to have integrated the many different variables. However, if the varied protocols were to be integrated, there is likelihood of increased efficacy and success to remedy the majority of cancer diseases (in my opinion).

### **Cleansing of the Body**

**Intestines:** Conduct a cleansing of the Gastro-Intestinal (GI) system of putrefied waste and accumulated toxins. Conduct any variety of colon plaque and waste removal protocols, whereby the individual can maintain an average of 2-3 bowel movements (BM) per day can help ensure continuous peristalsis action in the intestines, negating the opportunity for the buildup and stagnation of human wastes. This in turn reduces ability of accumulated excreted toxins into the GI system, blood and circulatory systems.

If you didn't know before, now you know that an average adult carries between five and twenty pounds of putrefied waste in their intestines. When the bowel/intestinal cleanse is performed, the individual can experience a sense of energy returning to the body, while feeling much lighter on their feet. There is less joint pain as well, given the immediate loss of dead weight. The body also begins to assimilate nutrients, vitamins and minerals more efficiently, that had previously been blocked from absorption in the intestines because of the colon plaque barrier buildup. The skin, scalp, acne, body odor and various other areas of the body begin to immediately improve in health and appearance.

Apart from the actual accumulated *fecal waste* material that is expelled (may be months or years old), depending on the cleansing protocol utilized, the body may also expel *colon plaque* material buildup. This material is produced over years and decades of accumulation. It forms in layer upon layer, lining the inside of the 20-40 feet of intestinal wall and has a rubbery/latex type of consistency. This layer not only prevents nutrition from being absorbed by the intestines, but is also responsible for adding internal pounds of dead weight to the body. Since it is immovable, it manifests partially as a distended abdomen and can never be removed by sit-ups or liposuction. This colon plaque is formed by the constant consumption of milk (contains casein protein which acts as a glue) and is mixed in with white processed breads and

crackers (which acts as a plaster like material) and various other foods that result in the same end result. Together, they form layer upon layer over the years until the diameter of the intestines is very small and becomes more occluded. There is also present a thick gelatin like biofilm that is sometimes present with *Candida Albicans* or is stand alone. It physically coats the intestines, impeding nutrient absorption and provides a protective barrier for parasites and other pathogens from medications designed to kill or expel the parasites. Once these plaques are expelled with the putrefied wastes, BM's can become more frequent, less constrictive and are more readily expelled (laxatives are no longer required). Dr. Jennifer Clark has a colon cleansing protocol that is passive and effective.

**Liver:** Conduct a cleansing of the Liver to remove backed up bile stones, parasites and other accumulated wastes/toxins that are trapped within the liver. The liver requires unimpeded ducts to process and filter the blood and excrete bile continuously. If impeded, the resultant effects may be detected with increased bile spilling over into the blood stream (yellow or jaundice eyes become visible), the re-circulation of wastes and toxins into the liver that cannot be effectively excreted from the body during the normal cleansing process (fatty liver diagnosis), increased skin rashes-eczema-psoriasis as the liver/colon cannot effectively excrete the wastes via circulatory-lymphatic-GI systems and must resort to the emergency exit (body's skin). These are some of the manifestations of having a dysfunctional liver that can be detected. Once the liver is cleaned of obstructions, debris and contaminants, it has the ability to re-generate and heal itself over time. It will be able to once again receive, process and expel the toxins and wastes effectively, thus removing the requirement to capture, quarantine and store the toxins in body fat cells around the waist line and other parts of the body including the liver itself. The individual will likely experience immediate weight loss (fat) and develop a leaner physical build. Dr. Hulda Clark and Andreas Moritz both advocated for their liver cleansing protocols that are passive (non-surgical) and effective at removing liver and gallbladder stones and parasites painlessly.

**Kidneys:** Conduct a cleansing of the kidneys and genitourinary system to remove stones, inorganic accumulations and toxins. The kidneys must be free of obstructions in order to continually remove residual wastes from the circulatory system. Any impediment may result in the kidneys backing up with wastes, fluids and potentially leading to kidney failure. The best method of preventing the development of stones and

sediments is continuous hydration with water, reduction of inorganic components that are absorbed into the body and moderate exercise. When bacteria and viruses infiltrate into the kidneys and cause infections, Dr. John Christopher (Naturopathic Doctor) utilized and advocated for the consumption of parsley root tea (a natural food) several times a day for eliminating the pathogens quickly in the kidneys. In many instances, within 24-48 hours, any bacterial infection would normally be resolved. The complete removal of salt consumption is advocated in some alternative medicine practitioners as the salt directly damages the kidneys itself. The Material Safety Data Sheet (MSDS) for salt indicates a Lethal Dose (LD – 50% chance of death) of consumption for a 60 pound child is 11.8 ounces. The kidneys can be damaged at much lesser amounts and may be accumulative. In other literature, the association has been made decades earlier that the increased consumption of salt was projected to result in increased poliomyelitis incidences in the population (1950's) which apparently materialized at the time. Similarly, that 15 grains can damage the kidney and 150 grains can paralyze the hind quarters of small animals or result in their death.

It is referenced that if the lymphatic system is congested and backed up, the kidneys are also likely congested with wastes. In this instance, the kidneys should be cleansed prior to initiating any significant lymphatic cleanse protocol, otherwise the lymphatic waste material may continue to recycle back into itself as the kidney is still incapable of filtering out the lymphatic wastes it is receiving.

**Parasites:** The infestation of parasites, worms larvae, eggs, bacteria, virus, fungus and a host of other pathogens can have devastating effects on the human immunological defense system in the body. They consume (steal) vitamins, trace minerals, nutrients, blood and other essential elements the body needs daily to function from the host. These parasites can colonize practically any organ they deem satisfactory to maintain their reproductive life cycle. They mostly originate in the GI system, but can migrate to the liver, pancreas, lungs, brain and any other location they desire. They are responsible for the formation of a leaky gut syndrome (mycelium roots perforate the intestinal walls) and excrete wastes while scavenging nutrients from the unsuspecting host. There are multiple species of parasites (over 100 varieties) that can take the shape of a microscopic pathogen, micro filarial worm, eggs, larvae, worms, flukes, tapeworm, Candida Albicans fungus and many other shapes and forms.

The most effective anti-parasite natural plants that have demonstrated efficacy are the green-black walnut hull tincture, wormwood tea and freshly ground cloves in capsules. The anti-parasite medications in the commercial market have demonstrated lesser efficacy in comparison to the above combination. Dr. Hulda Clark developed a very effective protocol to eradicate the different stages in Chapter 15 that helps ensure the different life cycle stages are overlapped to minimize the possibility of new generations emerging from eggs, etc. There is no guarantee that re-infection will not occur from others or pets, but by eradicating them from the onset, it allows the body to begin the healing process and keeps the parasitic colonies at a minimum population level. Regular prophylaxis is intended to continually eradicate any emerging populations effectively, allowing the strengthening of the immunological defense system that may have been weakened as a result of a parasite infestation.

### **Additional Observations**

Here are a few observations and opinions that have been generated and compiled after reviewing and conducting an analysis of the many alternative medicine health practitioners' protocols to remedy cancer:

- a. Cancer, for all intents and purposes, presents itself as a systemic disease of the body. It manifests itself when there is an immunological deficiency and the body cannot defend itself sufficiently enough. A state of physical malnutrition that results from consumption of nutrient deficient foods, buildup of putrefied, constipated and slow moving bowels which impedes the body's ability to effectively absorb nutrients and allows for toxic secretions to saturate the body and/or the development of a highly acidic environment in the body which provides the ideal formation and development conditions for cancer. It is physically detected in a weakened location within or on the surface of the body. It is not an isolated manifestation. Removal of only the physically detected cancer tumor or skin lesion (surgical or radiation intervention) will likely result in a new manifestation at the same or other location in the body since the root cause of its formation was not adequately addressed (eradicated) from the onset. When a cancer tumor/lesion is detected, diagnosed and excised, cellular remnants of the cancer are released from their roots and escape into the circulatory and lymphatic systems.

Once dislodged, they are free to roam and colonize anywhere of their choosing. Hence, the physically manifested tumor may have been surgically extracted from its original rooted location, but its cellular survivors are roaming about and looking to start a new colony in another weakened site within the body. The perpetual life cycle continues repeatedly until either the host eradicates the remaining cancer cells by changing the environment that allowed its original formation and promulgation, or the cancer cells eradicate the host by overrunning its immunological defenses and saturating the body with an abundance of new cancer cells and their resultant tumors.

- b. Any inadequately functioning or dysfunctional Gastro-Intestinal system that is backed up with slow expulsion of putrefied and toxic wastes from the body helps create an ideal environment for anaerobic pathogens to grow and multiply, including cancer, fungus, parasites and worms. These food wastes produce toxins that negatively affect the human body and organs on many levels. The stagnant and fermented wastes attract worms, fungus, larvae, flukes and other parasites to burrow into and feast on the partially digested and rotting foods, intestines and organs. These parasites can potentially migrate to the liver, pancreas, heart, brain, lymph and circulatory systems and practically any organ of their choosing.

An infestation of parasites can eventually lead to the development of a leaky gut syndrome, irritable bowel syndrome, gastritis, blockage of the common bile duct with worms or lead to various organ failures over time. The liver also can suffer directly or secondarily the effects of a dysfunctional GI system. If any of the hundreds of bile ducts become clogged and backed up with bile stones or parasites, the blood cleansing process is negatively impacted and can lead to the development of a fatty liver, parasite infestation of the liver's bile ducts and other unpleasant ailments. The human body can continue to deteriorate as a result of its physiological dysfunction until the GI system and liver are cleansed of wastes and obstructions. If this is not accomplished promptly, the end result could be nothing less than the formation and propagation of any number of degenerative diseases.

- c. The western diet has been linked to having a direct correlation with the formation of degenerative diseases anywhere in the body, including cancer. The foods that mankind eats has a direct impact

on personal health and wellness. Mankind was designed by the almighty creator to consume fresh fruits, vegetables, nuts, grains and clean water as the main sources of food and nutrition. Only in recent history has mankind voluntarily chosen to saturate his body with contaminated, processed, refined, nutritionally deficient and weaponized foods. If 1 in 100 people had cancer 100 years ago and today, 1 in 3 has cancer, what does this mean? What has changed in these last 100 years that has caused this genocidal upheaval of mankind? Many variables have changed (70 years of atomic and nuclear bomb testing residues in the atmosphere, depleted soils, cumulatively exposed older generation of the population, nuclear accidents releasing radiation into the breathable atmosphere, potable and ocean water contamination and grazing soils for food livestock saturated with contaminants, etc.), but the most consistent theme across the world seems to be the adoption of the western diet (high animal based protein diet) as their dietary consumption standard. As statistical evidence demonstrates, the higher the economic affluence of the population, the higher the assimilation of animal meat consumption. This has led to the higher incidence of degenerative disease formation in those societies that have adopted the westernized diet. The converse also appears to be true. The less consumption of the western diet (animal proteins, processed foods, etc.), the less degenerative disease formation in the general population. These tend to have a higher consumption of plant based proteins in their diets. To deny this inconvenient truth is to sell one's moral compass to the highest bidder or food industry.

- d. Inflammation anywhere within the body promotes and maintains disease formation and development. Reducing inflammatory conditions results in a healthier body, improved physiological functionality and reduces disease manifestation. Free radicals, clogged arteries and various other variables are all identified as being integral to inflammation and disease formation, etc. How can inflammation be consciously reduced? By avoiding consumption of foods that cause mucus development and inflammation buildup is one option. In one example, an individual consumed dairy products regularly and constantly experienced mucus production and buildup in the nasal sinuses (respiratory inflammation). When the dairy products were removed from the diet, the sinuses cleared up and there was less kidney malaise as well. A direct cause and effect correlation in this instance.

Histamine release into the body (from an insect bite, pollen absorption or other allergic/inflammation reaction) can be traced back to a polluted lymphatic system. Once this is cleansed of toxic excretions and viscous lymph material, there is less inflammation detected in the body as it can more efficiently expel the backed up wastes. The less inflammation that is experienced in the body (caused by any source), the healthier it becomes and functions more efficiently as there is less stress on the nerves, arteries and organs.

An example of how common table salt is viewed by some alternative medicine practitioners: salt contains no nutritional value. It is generally comprised of silica, salt and sand. It is reported that when absorbed into the blood stream (silica and sand have sharp edges like glass) it scrapes and gouges the interior lining of the blood vessels (veins/arteries) and leaves a scraping wound that leaks blood. When the wound is detected, the body sends out cholesterol patches to occlude the injury site (like a band aid) and helps in promoting healing. Chronic consumption of salt leads to chronic injury of the blood vessels and increased cholesterol accumulation in them (also increased arterial blood pressure readings). Cholesterol has been negatively persecuted as being bad for the body and has been targeted with many anti-cholesterol reducing drugs (statins) by the pharmaceutical companies, for the health of mankind.

The human brain is comprised of an estimated 25% of cholesterol. If cholesterol were bad, humanity probably would have been wiped out by now. Those who advocate for reduced cholesterol reducing medications are likely the salespeople who generate billions of dollars yearly from its sales. The skewed and bias attacks against cholesterol that surfaced overnight (decades ago) in society coincide with the discovery and new product sales of cholesterol lowering statin medications. Every few years, the acceptable levels of cholesterol in the body are lowered further (likely supported by the conventional medical businesses and advertising journals), resulting in increased prescriptions and utilization of statin reducing drugs (direct correlation of increased sales with lowering of “acceptable” cholesterol levels). A self-evaluation is needed to better understand the causes of inflammation in the individual and if it is artificially induced by environmental factors, dietary habits, a secondary effect or a byproduct of a medication or a physiological (vitamin and mineral) imbalance.

- e. Poor health can be reversed with a healthy diet, cleansing of the body and its organs, moderate exercise, proper nutrition, positive lifestyle and habit changes, personal commitment, physiological comprehension and probably the most important component of all so the individual can live a happy and healthy lifetime – ***Conscious Awareness and responsibility of the spiritual occupant inhabiting the physical body; to operate, feed, care, repair and maintain it in optimal health.*** Without conscious self-awareness, the individual will likely continue to be oblivious to the negative daily actions on their bodies they select. They are likely not aware of their contaminated environmental surroundings and their poor lifestyle habits and routines that have a direct consequence on their health and that of their families. If the individual elects not to take responsibility for maintaining and caring for their body, they are destined to live a much shorter lifespan than the healthy 120+ years mankind is supposedly capable of living as a Homo Sapiens species.

There are many case histories of centenarians living well past their projected lifespans, consuming natural foods and living healthy lifestyles on their own terms. There are many cases of seniors growing second, third and fourth new sets of teeth and regaining their natural hair color (back from gray) by consuming organic foods and keeping their bodies clean and in the best physical condition they can.

The body is an amazing thing and was never intended to become sick or diseased. The spiritual occupant is mostly not trained to operate or maintain it. Business interests have likely intervened over the last 100 years to ensure humanity is not consciously aware of how to care for the human body. Otherwise, many pharmaceutical, animal production, chemical, food processing and assorted businesses might likely collapse and go bankrupt when the reality surfaced that they likely caused more damage to the body than what they are advertised.

Until proper health and nutrition is taught in the educational systems around the world, each generation will likely stumble and fall during their lives, without fully comprehending why. The solution is to assimilate the knowledge into educational institutions, medical academia and general knowledge for the world masses.

The intent is not to save money, but to save lives and families from pain, suffering and anguish. The question is, will the cancer business and its sentinel's fight to the death or will they surrender peacefully once the world population awakens and challenges the status quo?

### Conclusion

**I**t is my conclusion and opinion as an investigator, after assimilating and analyzing the compiled research material, that all the different types of cancer can be prevented, reversed and remedied. It can be prevented by conscious awareness of the various variables (avoidance of nutritionally deficient foods/drinks, infestation with unhealthy pathogens and parasites, contaminants absorption, pollutants exposure, etc.) and their direct impact on the body. It can be arrested & reversed if conscious awareness is focused on proactively taking corrective actions (removing accumulated wastes from bowels/organs, parasites, fungus, acidity, etc.) from the body, allowing the body's immunological defense system to be effectively restored and can directly attack cancer cells naturally. It can be remedied by taking an integrated approach (wholesome foods consumption, clean water ingested, removal of putrefied wastes, parasites, pathogens, processed foods, sugars, abandoning the western diet, adoption of plant protein based diet (vegan conversion), toxins chelation, cleansing of the various organs, maintaining an alkaline pH balance systemically, avoidance of environmental pollutants, contaminants and avoiding re-contamination). These are all inter-related and likely conscious cancer awareness can be achieved by implementing these measures early in life, contributing to positive, effective and healthy lifestyle habits.

As simple and innocuous as it may seem on the surface, it should not come as a surprise that the best solutions in life are usually the simplest. The reason being in this instance is that the human body was never intended to become diseased of its own volition. It is a perfectly designed machine. It can regenerate body parts (skin, liver and every single cell in the body), overcome broken bones, cuts, abrasions, burns

and practically every type of injury. If the spiritual occupant of the human body does not interfere with the day to day functioning of the body (e.g. feeding it garbage foods, chemically laden candies, contaminated liquids, chemicals, cigarettes, alcohol, drugs, processed foods, carbonated acid drinks, refined sugars, animal proteins, dairy products, poultry, fish, milk, pollutants and the complete spectrum of items previously discussed throughout this book, etc.), then the body and its immunological defense system can function optimally as it was designed to do by mankind's bioengineer (the creator of all things in the universe). If premature expiration is the subconscious intent of the spiritual occupant, then enjoy the buffet of weaponized foods and other environmental contaminants that will help bring a tormented demise via cancer or other degenerative disease. If the intent is to live for many more years a healthy life, then corrective measures should be implemented to nourish and maintain the physical body adequately.

***“Let food be thy medicine and medicine be thy food”***

***- Hippocrates***

In reviewing just a few of the various hundreds of alternative medicine anti-cancer protocols, it is difficult to identify what exactly is the health threat to the general populace that the FDA, AMA, ACS and other organizations fear on the public's behalf. Is it the consumption of grapes, fruit seeds, common garden plants mixed into a tea, baking soda, cleaning out the body of toxic wastes-pollutants-contaminants-parasites, repairing the weakened human immunological defense system, feeding the body with natural-wholesome foods and clean water or some other previously unnamed threat to mankind's health?

Perhaps it is the more elaborate protocol methods like UHF radiowaves, electromagnetic wavelengths, regressive hypnosis and other more benign protocols that pose but a miniscule fraction of the dangers to public health risk in comparison to conventional cancer treatments of present day that the cancer business references as dangerous to the populace? Perhaps it is the potential loss of revenue if public awareness and knowledge is disseminated and implemented?

Interestingly, none of these alternative medicine protocols discussed require surgical intervention, nuclear radiation or toxic chemotherapy medication to arrest, reverse or eradicate the over 100 types of human cancers. They are passive in their mechanism of action and mostly do

not have any secondary effects. An overdose of eating grapes and natural foods is not commonplace, whereas more than 200,000 patients die yearly from secondary Lethal Dose (LD) effects by diligently taking their prescribed medications. Where are the medical crimes tribunals investigating the needless deaths of these patients and who is accountable to their families for their manslaughter by secondary medication effects? Is it the individual doctors, hospitals, pharmaceutical companies, health insurance companies or all of them?

Knowledge is power. The more that is learned and validated by an individual, village, town, city, state, country, the stronger they individually and collectively become (collective consciousness and mindfulness). As mankind learns more about the truths of our world and universe, the less he is inclined to buckle over in fear of the previously unknown. Cancer has a stigma of fear that is reinforced by the cancer business. It is supposed to be sanctimoniously honored by complete submission and obedience, no matter the person. Only a god (small "g") from the cancer business has the right to decree when or how a cancer patient is to be butchered, mutilated or permitted to pass away. Whether it be with a complete or partially maimed physical body, or whether it be in the hospital/home with tubes and machinery attached to the patient.

To not be permitted to choose your own cancer treatment protocol (conventional, alternative, experimental, etc.) with dignity (or potentially that of your child), but court ordered to mandate the illegal radiation and subsequent killing of your child by the cancer business protocols is a crime against humanity. It demonstrates that the hypothetical coffee shop business previously mentioned does really exist. The advertising, marketing and psychological operations sections of the cancer business have done a superb job of fearful mass marketing, political lobbying, promoting legislative laws, suppressing and persecuting those individuals (and doctors themselves) who would dare challenge the present methods of cancer treatment and more.

If history has shown humanity one thing, it is that mankind is normally resistant to change. One need only look as far back as the history of Galileo, Nostradamus and other scientists, philosophers, mathematicians, visionaries and common individuals, etc. Those who went against the beliefs of religion, science, society of their day were quickly dispatched to public sacrificial bon fires, crucifixion, stoning, drowning or other ceremonial cleansing of the mind/body/spirit

complex to expel the demons that existed within their bodies. Luckily today, those antiquated methods of subduing and suppressing hidden knowledge no longer exist. These have been replaced with laws and regulations that are overseen by the FDA, AMA and other arbitrary governmental and private sector organizations which rely on the scientific method to exorcise the demonic spirits that dare to share the forbidden knowledge of how to obtain good health and wellness. Luckily again for this generation, modern government protects its citizens from persecution, retaliation and prosecution, just like the barbaric leaders and dictatorial bright minds of centuries past. If centuries ago they believed rules were for fools, would they think the same applicable today?

In researching the information of the various protocol's for this book, it became apparent that each proponent was successful in detecting individual variables that directly impeded cancer's ability to form, grow or spread within the body. In several protocols, the eradication of the cancer itself was achieved directly. Yet in others, the protocol process was more lengthy and indirect. What are the correlations between the different protocols? That is difficult to concretely pinpoint or validate without having full laboratory resources and scientists/doctors who are not beholden to the faulty scientific method or the cancer business and its sentinels to investigate. Autonomous and sovereign researchers would be needed to provide unbiased analysis and conclusions. In today's world of business and unfettered greed, the economic temptation for recruitment by the cancer business may be too great for a common person to withstand and would probably require individuals who are directly suffering from cancer instead. These individuals would likely be less corruptible and their reward for achieving the objective (cancer cure) would be physical health resurrection and an escape from the cancer businesses conventional butchery protocols that ultimately awaited each of them if they failed in their endeavor.

A simple analogy that comes to mind and that you already know is this: how many ways can a potato be cooked? More than 50 ways: It can be baked, mashed, fried, boiled, sliced, curly fries, steak fries, soup, salad, Au Gratin, oven fries, home fries, roasted, tater tots, potato skins, hash browns, etc. and the list goes on. The same can be said of cancer. There are various different methods of "cooking" cancer and eradicating it. Some are quicker than others, while others are more elaborate and require more time/ingredients in the recipe. The end result is ultimately the same, eradicating the cancer cells or regressing them to

their natural homeostasis where they can do no harm (and regain/maintain their naturally healthy and balanced state).

One would think that the days of the world being viewed as flat or the universe orbiting around planet earth would have slipped into the dark days of human history, but no. Based on the research gathered, future generations will look back upon this century of the cancer business (conventional treatment) as generally being barbaric in their thought processes, actions and complicit with the pharmaceutical companies, greedy for wealth and power beyond measure at the cost of their fellow man. Is fear and intimidation to impose a unilateral means of addressing a specific medical challenge an authoritarian or dictatorial measure? The medical con job continues, but mankind is slowly awakening their consciousness to the different passive and proactive methods, techniques and constraints that have been placed on them, intended to impede and deny them access to obtaining the knowledge and awareness to recover their own physical and spiritual health.

If there were such a thing as a Cancer Crimes Tribunal (similar to war crimes tribunal), what would the faceless executive barbarians of the cancer business look like when they were brought forward into the public forum? Would they plead for mercy and claim ignorance that they did not know what was occurring while they made billions of dollars yearly in profits? Would they deny any knowledge of the situation or that they were only following orders of the AMA while they received millions in annual bonuses? Would the AMA claim they were following orders of the cancer business and beg for leniency?

What of the actual accomplices who knowingly advocated to continue the mutilating surgeries, deadly radiation, and toxic chemotherapy medications? Would they claim they were simply following AMA cancer protocol orders and feared for their jobs if they did not comply or will they claim ignorance of the situation? If yes, why did they never denounce it to the governmental authorities like the Department of Justice (DOJ) or FDA as a protected whistleblower? These same excuses can be exchanged for the World War II war crimes where millions perished under the auspices of just following orders. The difference in present day cancer treatment is that more money is being made and any new cancer competition is immediately crushed by the international cancer business and its partners/allies in the many governments around the world.

The cancer business does not appear to have any inclination to want to change the status quo. Their desire seems to be to maintain conventional cancer treatment protocols in place (cut, excise, radiate, prescribe and medicate cancer patients until they expire). Ultimately, it is to the detriment of the cancer patients themselves when they place blind obedience and faith into the hands of any medical practitioners that have abdicated their Hippocratic oath to the cancer business at large.

Any healer that consciously elects not to welcome all forms of medicine to treat their patients should be considered disqualified to serve humanity. If they only recognize and advocate (blindly) those ineffective medical protocols that have been perpetuated and espoused by the international cancer business for the last 100 years ineffectively, the cancer patients are likely doomed.

If the cancer business only supports patented drugs, surgical excision, radiation and chemotherapy protocols that have direct economic returns on investment for themselves, then their patients are limited in effective treatment for their individual cancers and are also probably less likely to effectively recover. These patients then, are converted from being an individual human being with a family and a life, into nothing more than a monetary dividend to be cashed in.

How ironic that a medical doctor would be forced to deny a cancer patient an alternative medicine protocol that could likely cure their cancer (for fear of having their medical license revoked by the medical licensing board/AMA/FDA for bypassing conventional-orthodox protocols), then the same doctor be treated secretly with the same alternative medicine for their, or their family members own cancer ailment so they can live? How sinister and unethical of the cancer business to pit doctors and patients against each other, to perpetuate the cancer business agenda.

Doctors have practically taken a life oath to help his fellow man, without prejudice, only to have the administrative and governing licensing committees ensure they are incapable of providing their patients with any alternative medicine protocols that may heal them from diseases that conventional medicine could not with their limited capabilities. This does not appear to be an unrealistic scenario in general as has been referenced by Dr. Budwig.

Until the medical community (medical doctors, oncologists, nurses, chiropractors, naturopathic doctors and all other health specialists) collectively join forces and demand their rights as healers be respected, little can be expected to change. There should be mandated changes to state licensing boards that limit their retaliatory reach by arbitrary members beholden to the AMA, doctors complete independence from the AMA, abolishment of the FDA and enactment of new federal legislation that guarantees the rights of patients and doctors to receive any type of medical treatment they elect to have (conventional, alternative or experimental).

Until such an occurrence takes place, they shall all continue to live in fear of the AMA, FDA, ACS, etc. Attempts to implement any type of alternative medicine protocol shall continue to be suppressed, persecuted and prosecuted by the sentinels of the cancer business. Fear is their weapon of choice to motivate medical practitioners not to step out of line of conventional cancer treatment protocols.

Fear is what the AMA, FDA, ACS and the many other partners in the cancer business rely on to subjugate their medical members and crush the idea of any new cancer cure that may bring down their lucrative house of cards (\$\$\$) and powerful empire. Power corrupts and absolute power, absolutely corrupts. I would submit to the medical community the following ideas for consideration and implementation:

1. Allow medical practitioners to use conventional, alternative and experimental protocols on their patients. The patients would sign documents, acknowledging they are voluntarily accepting alternative protocols for the treatment of their cancers and removing all liability to their medical practitioners. They have been fully informed (copies of protocol steps, procedures, dosages, side effects, etc.) of the protocol process and maintain signed (notarized) copies for their records.
2. Copies of these voluntary documents are kept on file at the medical practitioners office, for the record and available for future reference if required by government, etc.
3. The FDA would be notified monthly by the medical practitioners, indicating the pertinent and relevant information on their voluntary patients for the record. The FDA could request the patient case histories - Health Insurance Portability and Privacy Act (HIPPA) for review/analysis as needed.

4. The accumulated statistical results could provide relevant medical research feedback to further pursue any promising alternative medicine cancer protocols and their respective areas of effective interaction (pancreatic, breast, colon, cervical, brain, skeletal, leukemia, skin, etc.) It would be an opportunity for the cancer business to step up and lobby for effective changes to a medical system that appears to be extremely dysfunctional and plagued with biased treatment constraints. It is an opportunity for full disclosure of past transgressions and to regain the public's trust, thereby moving forward collectively. If the sentinels and others of the cancer business insist on maintaining the status quo of conventional medicine protocols, there is little choice remaining than to invoke a grass roots movement to legislate changes to the antiquated draconian method of healing humanity. History will judge those who stood in the way of healing mankind of its afflictions in a negative light. The truth always prevails, even if it is late in arriving.

Since mankind has been known to be lazy at times, and has also been indoctrinated to believe in a single pill solution to remedy any issue instantaneously, the concept of having to proactively work at something for 1 day, week, month or year to resolve a health issue is practically unacceptable in today's fast paced societies. Choices need to be made; make time to take care of yourself and heal the body from the inside out in a direct and determined manner or continue on your path as you are. If you are fortunate, you will not need to visit your oncologist and schedule surgery, radiation and toxic chemical medication treatments in this lifetime. If however, you are 1 of the 3 projected patients expected to develop cancer in the future or have the misfortune of already being diagnosed with any form of cancer, you now have a basic understanding of cancer and conscious awareness to comprehend and fight it much better.

Cancer does not randomly attack individuals or claim rights to any part of a person's body by chance. It attacks an individual who has weakened their natural immunological defenses against cancer with poor nutrition, pollution, contamination or having dysfunctional lifestyle habits. This immunological imbalance basically knocked the front door wide open to allow any degenerative disease, including cancer, into the sacred temple that is the human body. The human spirit dwells within it temporarily until we all die. Those who have lived past 100 years of age understood how to take care of it. Either through good lifestyle habits, direct knowledge of how to maintain it or perhaps just sheer luck in the way they chose to live their lives. Those who were

less fortunate and had limited time in this lifetime may not have had an opportunity to learn enough in their short period on earth. Perhaps their life schedule did not allow or permit conscious awareness to be realized. Perhaps they were purposely distracted by what they learned on TV, movies, society, etc. so that they could never learn how to care for their body effectively. Perhaps some had the misfortune of inheriting the toxins of their parents and neither of them were adequately instructed, or found the information that is known now throughout this book to show them how to maintain a healthy body.

It is never too late to learn something new. It is never too late to apply new knowledge and grow. It is never too late to forgive oneself and others of transgressions and trespasses. The odds have always been stacked against individual humanity (the have not's of this world) by those who do have in this world. Cancer does not discriminate as previously mentioned. However, if you have the knowledge of where it comes from, how it forms, how it is prevented and how can be remedied, then you have a hands up over cancer and one piece of the human life puzzle mastered.

Service to other (STO) is a theme that is gaining broader recognition and comprehension globally. What is it? Is it opening your home, bank account and everything to complete strangers who have less or nothing in comparison to oneself? No, it is being able to do something for another person, without the expectation of receiving anything in return. It is not handing over the car keys and say goodbye to your vehicle. Acceptable limits are defined individually. The end result is to help one another. One of the most important gifts that can be given is knowledge. As a hypothetical example, I will share the following story:

Once upon a time, there was a man who was starving for food. He had been travelling alone from the East and lost all his supplies and horse during a landslide as he was travelling to the West of the country. He had not eaten in days when he stumbled onto a nearby lake. There on the edge of the water, an Indian man sat and had a full basket of fish that he had captured. The starving man ran up and asked the Indian if he could have a few fish to eat and if the Indian could cook them for him. That he had never captured or eaten a fish before in his life as he was born and raised on processed and canned food in a metropolitan city. The Indian looked at him and saw he was physically weakened, emaciated and lacked the tools to survive in the wilderness for one day, let alone a lifetime. The Indian gave him the smallest fish to eat without

thinking twice and then said he would not give him any more. He said if I give you more than one fish today and I leave, your belly will be full today and your hunger instinct to catch food will be subdued. Tomorrow when you awake and everyday thereafter, you will be hungry again, but I will not be here to give you free fish. Instead of giving you more free fish to eat, I will teach you how to make a fishing pole, how to clean the fish and how to cook the fish. In this way, you will have the knowledge to fend for yourself for the rest of your life, instead of just this one time. The knowledge you did not have up to today, will serve you the rest of your life. Once you learn it, apply it and master it, then you will be a free man. You must also teach others so that they can also have the knowledge to survive if they so lack it. The wise Indian was not selfish, to the contrary, he gave the man more than a fish. He gave him conscious awareness and knowledge that could never be taken away, once given freely.

Service to others can have many interpretations. Sharing vital and important knowledge with others that is basic for human existence is a good example. Learn, assimilate, assess, analyze, experiment, implement and share knowledge is another. When enough knowledge is accumulated and comprehended, conscious awareness can finally be attained individually and collectively. It has always been right before all of us, hidden by the veiled cloud of continuous human distractions (TV, work, school, deadlines, family life, chores, laziness, on the go lifestyle, etc.), just waiting until the conscious mind of the spiritual occupant of the body becomes uncluttered and is ready to see its true existence.

All the while, the sub-conscious mind (the higher self) has been waiting forever patiently until the covertly indoctrinated, blinded and misinformed human mind of the spiritual occupant of the body could see past the purposely manifested distractions in life and become cognizant of its own existence. Only then can full realization of physical incarnation and consciousness be achieved and understood more readily, setting the individual free to be part of the collective consciousness that comprises humanity around the world. When an individual chooses to proactively see the universal freedom that has always been veiled and cloaked from their consciousness in plain sight, they can begin to comprehend everything around them. When that day of first vision manifests into individual consciousness, the spiritual transformation, enlightenment and awakening process begins and allows for the growth process to finally begin. Not too different from taking the blue or red pill, Neo.

By analyzing the various different protocols, extrapolating the key steps and processes that were able to negatively impact or eradicate the cancer manifestation, common themes, trends and connections can be visualized. They are nothing less than those areas previously identified and discussed (cleansing the GI system and organs, eradicating parasites, expelling toxins, strengthening the immunological defense system, avoiding pollutants/contaminants absorption and the consumption of healthy and wholesome foods/clean water, etc.). All indicators point to the conclusion that this is the basic foundation for good health, homeostasis and preventing the development of all types of degenerative diseases, including all types of cancer. Passive prevention with a good nutritional diet, in lieu of proactive surgical intervention, radiation and chemotherapy is likely the most optimal and realistic solution to individual and collective health recovery.

### **Summary**

Cancer can be remedied and overcome. It is not a lost battle. Interview carefully your medical advisors, screen out the snake oils salesman, never take at word any protocol as gospel, investigate all that is possible, seek council from others who have blazed the path before you and if needed, investigate, experiment and assess worthiness of any protocol or treatment used by health professionals. Preferably select those physicians who are consciously aware of their patients needs.

Cancer knowledge and awareness does not come from a TV commercial, a newspaper or magazine article, medical doctor, this book or any conventional cancer business organization. It comes from individual research, assimilation, comprehension and ultimately, action (or inaction) by each individual to effect the change desired. It will be inferred, stated and shouted by the many different individual protocols in the world that there are viable solutions to remedy cancer that have been around for up to 100 years or more. It only takes the will of the person to want to live and not succumb to the way of the martyr mindset (helpless victim) that has been ingrained subconsciously into the human mind as the default response upon hearing the words “you have cancer” by the conventional cancer business. More cancer patients of all ages = more (perpetual and infinite) donations for cancer research and cancer business profits.

Knowledge is a great thing for humanity. It can help and heal the many when shared. When knowledge is hidden or denied, humanity is left to

suffer while the search in desperation continues for answers that have been known forever, just suppressed and concealed away under lock and key from the distracted population.

Life's many roads can lead down dark paths and their booby traps along the way. When the body is neglected and abused over time by consuming food that was never intended to be eaten by the human body or is chronically exposed to contaminants and pollutants, they have a profound effect on the human body. The subsequent treatments conducted by conventional cancer medicine can leave a person mutilated, scarred or so weak that they have no quality of life to show for and may no longer wish to live in this lifetime or dimension.

Research and education on cause and effect variables can provide an interested person with knowledge on obtaining and achieving good health. Those who are fighters will be able to decipher the code that leads to the hidden treasure of conscious health knowledge and leave them just as new as when they were born. Choose your path intuitively and don't be blinded by partisan agendas and indoctrination that are not your own.

You may only have one opportunity to realize your objective to achieving and maintaining good health, so make the best decision you can with the information researched. When practical, seek out those who have travelled previously on the road you are now on. Ask them how they were able to overcome the many obstacles and hidden traps on their individual journeys to health recovery and what secrets they can share to for a happier and healthier life.

The human body is an inherently perfect machine. It was never intended to become sick or diseased. Mankind has been misled and misinformed into consuming processed foods/animal proteins over the last 100+ years that were never intended to be part of his diet. Once the weaponized foods, chemical pollutants and alien life forms (parasites, worms, fungus, larvae) have all been removed from the body's physical sphere of influence, it can begin healing, provided man does not interfere with this natural process of rebuilding itself and achieving internal physiological homeostasis. A functional immunological defense system, expulsion of toxic wastes and the consumption of wholesome and nutritional foods are pillars for good health. Veganism, consumption of plant based proteins and foods, instead of animals, hold the ultimate key to good health and longevity. The various choices

are clear: Conventional cancer treatment (surgery, radiation, chemotherapy, mutilation, etc.) or alternative medicine and prevention (lifestyle and dietary habit changes, strong and healthy immunological defense system, homeostasis, etc.) for life.

May you ultimately achieve good health, long life and happiness in everything you do in this lifetime. See past the chronic and continuous distracting noise that deliberately surrounds each of us everyday and keep your eye on the bouncing ball that is your health and life. Don't allow yourself to be tricked into believing anything that is not in your own best interest.

***“God gave you a perfect body and mind. Mankind gave you foods that fogged your brain and poisoned your body”***  
***- Jean-Paul O'Brien***

I will meet you on the other side, but not for another 70 years at least so don't wait up if you get there before I do. Instead, rejoice and celebrate in the manifestation that is humanity. An imperfect creature that is capable of a great many things. Be it physical, metaphysical, spiritual, artistic, musical, loving, good, evil or any other title bestowed.

If you remember nothing else from this book, please remember this: mankind is a mere photon speck from the exponential trillions of trillions of specks that emanated from the body of God when he launched us loose into the universe to explore and learn everything we could so that when we knew everything, we could come back and share with him all that we had lived and learned. In sending us on our infinite journeys to experience and learn throughout the universe, he gave us infinite love and free will to do right or wrong as we selected. There is no hell, only the false hell that was invented to keep the population fearful and thus, under control. Fear is a learned emotion that is constantly being reinforced with horror movies, wars, crimes, TV shows and the assorted news outlets that mostly publish fear or horror based news reporting. One of the best countermeasures is to throw out or give away all the TVs in the home. They serve no real purpose, except to dumb down humanity and perpetuate the control system.

Conscious awareness and karma are an innate part of what we are and when realized, helps to keep us balanced and moving forward on our individual and collective paths. As individual photon specks, we are of God. Collectively as a single body in unison, we are God in his entirety.

You are God and you are of God. Maintaining your sacred temple that is your body clean will bring you back to where you started with God; healthy and beautiful. Take proper care of your body as you were supposed to and you will learn many more of your life lessons in this prolonged lifetime.

Honor and respect it as it serves you on your journey. Learn everything you can, apply what you have learned, share with others selflessly, learn to forgive everyone completely and love everything as everything loves you also. Manifest the destiny you choose and want for yourself, your family, your loved ones, your friends, your community, your world, your galaxy and your universe. You are ultimately the master of your destiny. Smile everyday, it does not cost anything and you may evoke a smile from someone else who is silently aching to be smiled upon ☺

God bless.

Jean-Paul

## DISCLAIMER

I am not a doctor. I am not offering medical advice to anyone who may read the information contained herein. The historical health information discussed is not meant as a substitute for advice from your physician or other health professional and should not be interpreted as a medically approved treatment regimen used to diagnose, treat or cure any medical condition. Any concerns about physical health should be addressed exclusively by your medical physician or your medical health professional.

Many opinions have been made throughout the book and these should not be interpreted as factual medical knowledge, events or advice. Many observations, comparisons, analysis, assessments, opinions and conclusions are conducted as a result of research into the topic of historical cancer cure claims over the last 100 years, throughout the book.

In no instance shall the information provided or referenced be construed as providing any type of medical examinations, analysis, guidance or treatment regimens of any kind and are not intended to be interpreted as such. The author assumes no responsibility or liability for any actions the reader may take, share with others, misuse or misinterpret and is intended for general information use only. Every effort has been made to ensure that any information presented and discussed is factually accurate, but the author is not liable for any errors in content or meaning that may be interpreted erroneously. The reader is advised to conduct independent research to validate any and all statements and opinions made, which were compiled during the research for this book.

Can you imagine one day learning that there have been hundreds of alternative medicine cancer cures discovered over the last 100 years by medical doctors, scientists, health specialists, inventors, common folk and everywhere in between, but have been suppressed or restricted from public access? This book chronicles personal histories of several such pioneers who battled against cancer and the cures they claimed to have used to heal thousands, if not tens of thousands of their patients. Others never claimed to have cured cancer, but rather the individuals they treated claimed their protocols worked and cured them of their cancers completely. Thousands of others have similar personal stories of being abandoned and sent home to die from the hospital when their conventional cancer treatment protocol (surgery, radiation and toxic chemotherapy medications) could not provide them with any other benefit to arrest, reverse or heal their cancers.

Many of these cancer patients were not psychologically ready to surrender their physical existence and sought out alternative medicine protocols to help them fight their varied cancer ailments. Having been given only a few weeks or days remaining in life, they dispatched the unfounded formality of fear they had clutched onto tightly and carried so faithfully for those many years into the garbage pile of regret. The liberation experienced after the realization there was no longer any fear keeping them back from seeking real treatment knowledge set them free to recover their health. Having disposed of the useless emotion of fear, they embraced the alternative health knowledge received and applied it wholeheartedly. One-five-ten-twenty years later, many are still alive today and have complete healing, thanks to the protocols invented by some of the individuals referenced herein.

This book recognizes some of the brave anti-cancer pioneers who challenged the conventional cancer business industry protocols for the health of mankind. Their unorthodox alternative medicine protocols changed the lives of thousands of cancer patients around the world and changed the final outcome of their manifest destinies.
